## EXHIBIT A SCOPE OF SERVICES

The Services to be performed for the City by the Contractor under this Agreement are set forth below.

### **Contractor Scope**

The Contractor shall perform all the review, inspection, and analysis necessary to prepare a System Expansion Plan for Silicon Valley Power's (SVP) electric system. The plan shall provide an assessment of the current electric system and a complete plan for its future development.

The System Expansion Plan shall include a minimum of the following items:

- A. Provide a detailed 3-year development plan of SVP's electric system expansion to meet the significant new load being connected to its system. The focus will be on building multiple capital improvement projects in parallel to meet the 3-year short term capacity need while maintaining electric system reliability. Prioritize the projects and provide a strategy, schedule, and estimated cost for their completion. All projects in the detailed 3-year plan are to include preliminary engineering (30% plans – constructability reviewed and sequencing with remaining projects) and specify any permitting requirements, land requirements and construction scope. Provide guidance on establishing proper maintenance of proposed new assets and technology.
- B. The Constructor shall provide the basis for updating the Load Development Fee per the final System Expansion Plan. The Load Development Fee is established to recover costs incurred by the City in modifying its electrical infrastructure to support load growth spurred by new development.
- C. Provide a high level 20-year development plan of SVP's electric system expansion to meet high, medium, and low load trajectory scenarios for future load growth. The focus will be on building a footprint for SVP to meet future load growth over the next 20 years while maintaining electric system reliability.
- D. Determine the ultimate need, capacity, configuration, and method of service, for proposed new substations and the future disposition of each existing substation considering the current property size, age and condition of the equipment, estimated remaining life, and number of feeders.
- E. Assess SVP's submission to the CAISO's Transmission Planning Process (TPP) to insure that PG&E Bulk Electric System (BES) projects have been identified

and are on schedule to meet SVPs load growth, in addition to assessing SVP's Transmission Planning process to meet CAISO, WECC, and TPL-001-5.

- F. Assess SVP's CEC load forecast submittals used to generate the biennial Integrated Energy Policy Report (IEPR).
- G. Assess the impact of increased future distributed generation and load (i.e. solar, battery storage, electric vehicles) and provide recommendations regarding the most optimal integration with the distribution system and possible use of distributed generation by SVP to improve system efficiency and reliability.
- H. Assess the condition of the existing electric system and recommend maintenance and capital replacements as required. The assessment should also consider the future impact of aging infrastructure.
- I. Review current system, substation, and feeder load projections for reasonableness and use the results to determine the ultimate system, substation, and feeder plan. Assess the potential problems if actual loads differ significantly.
- J. Assess system reliability and provide cost/benefit analysis and estimated levels of improvement for recommendations on ways to maintain or improve it.
- K. Assess system losses and provide cost/benefit analysis for recommendations on ways to reduce system losses.
- L. Assess the future reactive power requirements/need for power factor improvement to the electric substation, distribution, 230kV/115kV/60 kV transmission systems and include a benefit/cost analysis of feeder capacitors versus substation capacitors.
- M. A report on each of the standards and guidelines listed below to include an assessment of their adequacy, any noted deficiencies, suggested changes that can be immediately incorporated into them, and if deemed necessary, a recommended plan to bring each one up to relevant industry standards and current practices, including mitigation of arc-flash hazards. The absence of any standards and guidelines that a utility the size of SVP should have shall be noted and recommendations made on how to best produce them.
  - 1. Existing system planning criteria, including conductor and equipment rating, loading, short circuit studies, capacity determination for substations, transmission lines, distribution lines, and service facilities.
  - 2. Engineering design guidelines for substations, transmission lines, distribution lines, and service facilities.
  - 3. Conductor and equipment loading capacities (under both normal full load and Emergency conditions) for substations, transmission lines, distribution lines and service facilities.

4. Material and equipment standards and specifications.
  5. Economic evaluation criteria and methods for determination of return on investment.
- N. Identify the opportunities to utilize the enabling technology resulting from SVP's AMI and Smart Grid deployment and recommend the most effective methods to utilize and capture value from the proposed Smart Grid initiatives over the next five and twenty year planning period.
- O. Assess the current emergency response plans, system restoration capabilities, energy control center and back-up control center facilities, emergency material stockpiling, and feeder back-up capacity, and make recommendations for improvements.
- P. Review current engineering, operations and electric system key performance indicators in use and make recommendations regarding the adequacy and validity of each one, and additions and deletions to the list.
- Q. Assess the adequacy of existing vegetation management programs and standards, and make recommendations for improvements.

The Contractor shall conduct all necessary meetings and interviews, keep minutes and interview summaries as requested, and provide copies to SVP.

Contractor and subcontractors shall utilize e-Builder, a web-based project management tool, or City's designated replacement for projects assigned under this agreement. Access to the project management tool, as well as associated training, will be provided by the City at no cost to the Contractor or its subcontractors. Contractor and subcontractors shall have the responsibility for utilizing the project management tool as necessary for the following: invoice submittal, potential change order submittals, change orders, Request for Information (RFI) submittals, correspondence, assigned tasks and other matters that transpire on the site as directed by City. All documents (including as built drawings) shall be converted or scanned into the Portable Document Format (PDF) file and uploaded to e-Builder.

At the conclusion of the project, the Contractor shall provide electronic copies of all final reports, worksheets, system studies and data associated with this project to SVP in (but not limited to) .pdf, .docx, .xlsx, .xml, .dwf, .dwg, .sav formats as applicable and that are not proprietary in nature. If work is complete in PowerWorld, Contractor to ensure the deliverable is provided in proper and functional GE PSLF format.

Deliverables for Items A and B are due five (5) months after execution of Agreement and the remaining deliverable items are due fourteen (14) months after execution of Agreement.

## **SVP Scope**

To assist the consultant in performing the work, SVP shall provide the following:

- A. Copies of all relevant existing standards, design guidelines, system planning guidelines, specifications and drawings required.
- B. Full access to any and all existing plans and records relevant to the performance of the contract.
- C. Complete ESRI GIS database that includes electric infrastructure, land use, AMI system configuration, and related information.
- D. Available distribution system data for analysis such as distribution feeder reads, transmission line reads, and substation banks loading during the past peak load periods.
- E. Complete transmission system database in GE PSLF, DEW, and Aspen.
- F. Available system inspection and maintenance information.
- G. Past system evaluations and annual system reports.
- H. System load forecast and Capital Improvement Plans.
- I. Latest Integrated Resource Plan.
- J. Operating system data as available from SCADA (There presently is no SCADA data available on the distribution system beyond the substation boundary walls).
- K. Incremental generation and purchased power costs.
- L. Current electric rates and Rules and Regulations.
