

9.4.5. Construction Considerations

The shoring should be constructed utilizing a top-down method. Following the installation of the soldier or sheet piles, the soil is first partially excavated to allow for installation of the topmost row of internal bracing. For rakers, the staging will need to include installation of temporary rakers and their subsequent removal and replacement as the excavation advances. Following the installation of the topmost row of internal bracing, the excavation then proceeds, and each level of internal bracing should be installed as soon as practicable. The shoring designer should analyze each stage of internal bracing installation to ensure that the excavation has an adequate Factor of Safety.

For the soldier pile system, the lagging should be installed simultaneously as the excavation proceeds. To facilitate a tight connection between the lagging and the soils and to minimize settlement, any voids left behind the lagging should be filled with cement grout as the excavation advances. To continuously support the excavation, any unsupported height should not exceed 4 feet.

The annulus of the soldier pile beam borehole below the excavation bottom should be backfilled with concrete. Pea gravel may be used to backfill the hole from the excavation bottom to the top grade. If the soldier pile beams are to be retrieved after construction, they may be backfilled with a weaker cementitious slurry mix below the excavation bottom. If the contractor chooses to use a well-rounded uniform pea gravel material to fill the hole below the excavation bottom, a reduction of 33 percent should be applied to the passive soil resistance values provided in Table 6 to account for potential lateral yielding of the pea gravel backfill.

9.4.6. Shoring Performance Monitoring

Some means of monitoring the performance of the shoring system and nearby paved surfaces and structures is recommended. The monitoring should consist of periodic visual inspections and lateral and vertical surveying of the tops of the soldier / sheet piles and strategic survey points. It is recommended that a survey be performed before construction begins and then, as the excavation proceeds, the monitoring should be performed daily or whenever excavation activities are taking place. In addition, the Contractor should inspect the shoring daily and actively search for presence of cracks or excessive movements and report immediately to the shoring designer and the Geotechnical Engineer. This office can provide further recommendations of the monitoring when the design of the shoring system is finalized.

9.5. Seismic Design Parameters

Based on blowcount data obtained from the current field investigation and known geologic conditions, the site is classified as Site Class E, i.e., soft soil, in accordance with ASCE 7-16, Section 20.3.2. Given the values of the spectral acceleration parameters S_s and S_1 and the Site Class E, a site-specific ground motion hazard analysis was required per Section 11.4.8 of ASCE 7-16.

The ground motion hazard analysis was performed in accordance with ASCE 7-16, Section 21.2 and required the evaluation of deterministic (MCE_R) ground motions and probabilistic (MCE_R) ground motions.

For the deterministic hazard analysis (DSHA) the closest 4 faults to the site listed in Table 2 were considered, assuming an average shear wave velocity in the top 30 meters (V_{S30}) of 150 meters per second. The DSHA acceleration response spectrum (ARS) was determined using the Next Generation Attenuation (NGA) – West2 models. The NGA-West2 models were developed as part of a multidisciplinary research program coordinated by the Lifelines Program of the Pacific Earthquake Engineering Research Center (PEER), in partnership with the U.S. Geologic Survey (USGS) and the Southern California Earthquake Center (SCEC). Using the Excel spreadsheet developed by Seyhan (2015), the 84th-percentile median spectral acceleration values ($S_{aRotD50}$) were calculated based on the equally weighted models by:

- Abrahamson and Silva (2014);
- Boore et al. (2014);
- Campbell and Bozorgnia (2014); and
- Chiou and Youngs (2014).

The 84th-percentile median spectral acceleration values ($S_{aRotD50}$) were subsequently converted to risk-targeted maximum rotated direction ($S_{aRotD100}$) values using the procedure suggested by Shahi and Baker (2014) and adjusted further by the risk coefficients provided in the web tool <https://www.seaoc.org/page/seismicdesignmaptool>.

The probabilistic seismic hazard analyses (PSHA) were performed for an earthquake event with a return period of 2,475 years, utilizing the USGS Unified Hazard tool (<https://earthquake.usgs.gov/hazards/interactive/>) for the dynamic: conterminous US 2014 update (v4.2.0) using a return period of 2,475 years. For the subject site the website utilizes an assumed average shear wave velocity in the top 30 meters (V_{S30}) of 180 meters per second, which corresponds to a Site Class D/E (soft soil).

The seismic spectral acceleration parameters to be used in the design for buildings and structures subject to seismic shaking are provided in Table 7 below. The design spectrum and a summary of the site coefficients are provided in Appendix C.

Table 7
2019 CBC and ASCE 7-16 Seismic Design Parameters
 Referenced Site Latitude and Longitude: 37.346191°, -121.937395°

Site Class Table 20.3-1 ASCE 7-16		E
Coefficients for the Maximum Considered Earthquake, MCE_R, for Site Class B	Short Period (0.2 seconds), S_s	1.5*
	1 Second Period, S_1	0.6*
Coefficients for the Maximum Considered Earthquake, MCE_R (Site Modified)	Short Period (0.2 seconds), S_{MS}	1.44**
	1 Second Period, S_{M1}	2.76**
Coefficients for the Design Earthquake	Short Period (0.2 seconds), S_{DS}	0.96**
	1 Second Period, S_{D1}	1.84**
Design PGA (risk-targeted maximum rotated direction)		0.35g**
Site Modified Peak Ground Acceleration PGA_M (geometric mean)		0.605g*
* Values obtained from Structural Engineers Association of California (SEAOC) and the Office of Statewide Health Planning and Development (OSHPD) website application, https://www.seaoc.org/page/scismicdesignmapprool based on ASCE7-16 and 2018 International Building Code.		
** These parameters were obtained from a site-specific ground motion hazard analysis as required per ASCE 7-16, Section 21.2.		

9.6. Mat Foundation

The proposed residential / retail building may be supported on a conventional mat foundation. An advantage of a mat foundation for this project is the reduction of the applied pressures on the relatively soft subgrade and the suitability for ease of installation of a reliable waterproofing system.

9.6.1. Design Parameters for the Mat Foundation

Recommendations for the design of the mat foundation for the proposed building are provided in Table 8 below. The mat foundation should be designed and reinforced in accordance with the recommendations of the Structural Engineer and should conform to the requirements of the 2019 CBC.

The recommendations provided herein do not account for eccentric loads or localized areas where vertical stress redistributions may be encountered. Once the foundation configuration and loads are finalized, this office should be contacted to evaluate this specific foundation configuration and loading condition prior to finalization of the mat foundation design.

Table 8
Geotechnical Design Parameters
Mat Foundation

Embedment depth	<ul style="list-style-type: none"> Between 12 and 15 feet
Dimensions (feet)	<ul style="list-style-type: none"> Triangularly shaped with side lengths of approximately 250 feet by 137 feet by 283 feet (max dimensions)
Allowable Bearing Pressure	<ul style="list-style-type: none"> Average allowable bearing pressure 2,000 psf The allowable bearing value may be increased by one-third for transient live loads from wind and seismic loading.
Estimated Settlement	<ul style="list-style-type: none"> Approximate 1.5 inches of static settlement. Approximate 1.5 inches of dynamic settlement Combined (static plus dynamic) differential settlement of approximately 1.5 inches over a distance of 30 feet.
Modulus of Subgrade Reaction	<ul style="list-style-type: none"> For design of the mat foundations, a reference modulus of subgrade reaction k_1 of 35 pci derived for a square bearing plate with 1-foot x 1-foot dimensions may be used. For the on-site clayey soils, the modulus of subgrade reaction k (in pci) for the design of a concrete of a given dimension can be calculated as: $k = k_1 \frac{1 + 0.5 * \frac{B}{L}}{1.5 * B}$ Where B and L are the governing width and the length of the element in feet, but no more than 14 times the thickness of the mat foundation.
Swelling Pressure (No Factor of Safety)	<ul style="list-style-type: none"> Foundations should be designed to withstand an upward swelling pressure of 15 psf
Allowable Adhesion at the base (incorporates Factor of Safety of 1.5)	<ul style="list-style-type: none"> 500 psf Adhesion to be multiplied by contact area per 2019 CBC Section 1806.3.2.
Allowable Lateral Passive Resistance (incorporates Factor of Safety of 2)	<ul style="list-style-type: none"> 240 /120 pcf (above/below groundwater) (EFD, equivalent fluid density) The passive resistance derived of the upper 12 inches should be neglected
Allowable Combined Lateral Resistance	<ul style="list-style-type: none"> Total allowable resistance to lateral loads can be calculated by combining lateral resistance due to adhesion at the base and lateral passive resistance. Passive resistance values may be increased by one-third when considering transient wind or seismic loading
Uplift Capacity	<ul style="list-style-type: none"> The weight of the soil that contributes to the uplift capacity can be estimated as a zone defined by an angle of 30 degrees from the vertical projected from the top edge of the mat to the adjacent grade. A total unit weight of 125 pcf may be used for the soil. The shallowest depth of embedment from the adjacent grade shall be used in the estimations.

9.6.2. Groundwater Considerations

Building basement slabs will extend well below the design groundwater level and will be subject to hydrostatic uplift pressure. For the analyses of hydrostatic pressure and building uplift pressure, we recommend that a groundwater level at a depth of about 4 feet below the existing grade be assumed. Basement walls and mat foundations should incorporate a complete waterproofing system. Waterproofing system should be designed by an Engineer with extensive experience in waterproofing for basement walls for residential or commercial use.

9.7. Shallow Foundations Adjacent to Utility Trenches

The bottom of any trenches that are required for any buried utilities should be kept outside a zone defined by a 1(H):1(V) plane projected downward from the outside bottom edge of any existing or proposed foundation. Backfill materials and procedures shall conform to the recommendations provided in the “Site Preparation” and “General Site Grading Recommendations” sections of this report. If any utilities need to be placed within the zone of influence, the utility conduit (pipes, cables) should be designed to account for the increased surcharge from the foundation pressures and to withstand potential differential settlement between the surcharged and unsurcharged segments of the pipe. Generally, the utility conduits within the impacted zone should be protected by concrete encasement or utilidors.

For utility conduits that cross underneath foundations the piping and encasement should be designed to withstand differential settlements of up to 1 inch over a distance equal to half of the depth of the pipe crown below the bottom of the foundation element. Tetra Tech should be contacted to review any specific utility interaction configurations and their proposed mitigation.

9.8. Exterior Concrete Slabs on Grade

Exterior slabs should be placed on subgrade prepared in accordance with the recommendations provided in the “Site Preparation” section of this report. A Structural Engineer or an Engineer specialized in concrete design should be consulted if cracking of the exterior slabs is to be minimized. As a minimum for exterior walkways, it is recommended that narrow strip concrete slabs, such as sidewalks, be reinforced with at least No.4 reinforcing bars placed longitudinally at 18 inches on center. Wide exterior slabs should be reinforced with at least No.4 reinforcing bars placed 18 inches on center, each way. Reinforcement should extend through the control joints to reduce the potential for differential movement.

Control joints should be provided in concrete slabs-on-grade as recommended by American Concrete Institute (ACI PRC-224.3-95) guidelines and at a maximum spacing (in feet) of 2 to 3 times of the slab thickness (in inches), but generally no more than 10 feet. All joints should form approximately square patterns to reduce potential for randomly oriented shrinkage cracks. The control joints should be tooled at the time of the pour or sawcut to $\frac{1}{4}$ of slab depth within 6 to 8 hours of concrete placement. All joints in flatwork should be sealed to prevent moisture, vermin, or foreign material intrusion. Precautions should be taken to prevent curling of slabs.

9.9. Basement Walls

Buried building walls for the subterranean parking lot level will act as basement walls which will support lateral earth pressures.

9.9.1. Lateral Loading

The 2019 CBC requires that basement walls be designed for at-rest earth pressures for static conditions. The design values presented in Table 9 below were developed based on a level backfill condition. In addition, it is required that a drainage system will be installed behind the wall so that external water pressure will not develop. If a drainage system is not installed, hydrostatic pressures will need to be incorporated into the design. A design groundwater depth of 4 feet may be used to calculate the hydrostatic pressures acting on the basement walls.

Based on the Section 1803.5.12 of the 2019 CBC the design of retaining structures higher than 6 feet, as measured from the bottom of the footing, needs to consider seismically induced lateral earth pressures. According to the 2019 CBC the seismically induced lateral earth pressures should be determined using the design earthquake ground motions. Based on the seismic design parameters provided in Table 7 of this report, the Design Peak Ground Acceleration (PGA) at the site is approximately 0.35g. The seismically induced earth pressure increments were estimated using the method recommended by Agusti and Sitar (2013).

The combined static and seismic lateral passive earth pressures during the design seismic event were computed as recommended by Taciroglu (2013). The calculated passive earth pressures are included in Table 9.

Basement walls should be appropriately waterproofed in accordance with 2019 CBC Section 1805.3. The on-site soils are predominately fine-grained and have a potential for expansion. Therefore, the on-site soils should not be re-used for backfill within 2 feet behind basement walls. The backfill within at least 2 feet immediately behind the basement walls should be imported materials with an Expansion Index of less than 20 and fines content (passing #200 sieve) of less than 15 percent. Where bare ground is present behind the top of the wall, the backfill should be capped with a concrete swale or with at least 12 inches of relatively impervious clayey material and sloped to prevent ponding of water. The granular backfill should be moisture-conditioned to at least 110 percent of optimum moisture content and compacted in loose lifts not more than 8 inches to at least 90 percent of the maximum dry density as evaluated by the latest version of ASTM D1557.

**Table 9
 Geotechnical Design Parameters for Basement Walls**

At rest Pressure for Non-yielding Walls, i.e., Basement Walls		
<u>Static</u> pressure (psf)	Level ground behind wall (above groundwater)	$62z + 0.52Q$
	Level ground behind wall (below groundwater at depth $z > z_w$)	$62z_w + 95(z - z_w) + 0.52Q$
<u>Seismic</u> pressure <u>increment</u> (psf)	Level ground behind wall	$30z$
Passive Pressure Resistance		
<u>Static</u> resistance (psf) (incorporates Factor of Safety of 2)	Level ground behind wall (above groundwater)	$180z_1$
<u>Seismic</u> ultimate resistance (psf) (No Factor of Safety included)		$275z_1$
<u>Static</u> resistance (psf) (incorporates Factor of Safety of 2)	Level ground behind wall (below groundwater at depth $z_1 > z_w$)	$180z_w + 90(z_1 - z_w)$
<u>Seismic</u> ultimate resistance (psf) (No Factor of Safety included)		$275z_w + 137(z_1 - z_w)$
Notes:		
<ul style="list-style-type: none"> Lateral pressures due to seismic loading are based on a $PGA=0.35g$. The appropriate total seismic force (at rest plus seismic increment for non-yielding walls) should be calculated by assuming a downward increasing triangle equivalent fluid pressure distribution. The resulting force should be assumed to act at 1/3 of the height of the wall above the heel of the wall. Pressures are based on soil with $\phi = 29^\circ$, $c = 0$ psf, $\gamma_t = 125$ pcf (above and below groundwater) 		
Legend:		
z ... Depth (ft) below the grade behind the wall – depth measured from the ground surface to the depth where the soil lateral pressure is being evaluated. z_1 ... Depth (ft) below the grade where passive conditions apply, i.e., usually in front of the wall – depth measured from the ground surface to the depth where the soil lateral pressure is being evaluated. z_w ... Depth to groundwater (ft) – depth measured from the ground surface to the groundwater (a constant), $z_w = 4$ feet. Q ... Uniform live surcharge (psf) within a 1(H):1(V) plane drawn upward from the heel of the wall footing.		

If the basement walls are built in contact with the native expansive soils, the walls should be designed for an additional uniform lateral swelling pressure of 15 psf acting over the full height of the wall.

9.10. Uplift of Buried Structures

Structures founded at depths greater than 4 feet should be designed to resist uplift forces due to buoyancy exerted by groundwater below such depth to prevent buried structures including utilities/pipelines from floating or shifting upward. The designer must consider all the downward and upward forces on the structures and design for the worst-case scenario.

9.11. Portland Cement Concrete (PCC) Pavement Design

9.11.1. Pavement Structural Section

Pavements are anticipated for the entrance driveway to the site. The pavement subgrade should be prepared as recommended in Section 9.3 of this report. The recommended PCC pavement sections are presented in Table 10 below. Tetra Tech does not practice in the field of structural PCC pavement structural design and applies pavement section design method per ACI 330-08 based on the subgrade soil materials and the geotechnical conditions. Design and detailing of the reinforcement, jointing, doweling, mix design, concrete placement, curing, and specifications should be performed in accordance with ACI recommendations.

The PCC pavement sections were designed for a 20-year design life and assumed average daily truck traffic (ADTT) of 25. Contraction, construction, and isolation joints should be placed per ACI recommendations. The design assumes that 8 inches of Aggregate Base Materials will be placed on top of the compacted subgrade. The aggregate base materials should conform to the Specifications for Public Works Construction (Green Book) Section 200-2. The aggregate base course should be compacted to 95 percent or more of the relative density, as evaluated by the latest version of ASTM D1557.

The design of the pavement assumes that the Portland cement concrete will have a 28-day flexural strength (modulus of rupture determined by the third-point method) of at least 550 psi (equivalent compressive strength of about 4,000 psi) or 650 psi (equivalent compressive strength of about 5,000 psi). A modulus of subgrade reaction (*k* value) of 75 pci was assumed for the top of the compacted subgrade soils.

Table 10
Portland Cement Concrete Pavement Sections

Subgrade Soil		Lean Clay			
Modulus of Subgrade Reaction, <i>k</i>		75 pci			
Thickness of Aggregate Base Material		8 inches			
PCC Pavement 28-day concrete compressive strength		4,000 psi		5,000 psi	
ADTT	Pavement Traffic Description	PCC Thickness (inches)	Max Joint Spacing (feet)	PCC Thickness (inches)	Max Joint Spacing (feet)
25	Shopping Center Entrance and Service Lanes	6	11	5	10

9.11.2. Construction Considerations

Paved areas should be properly sloped, and surface drainage facilities should be established to reduce water infiltration into the pavement subgrade. Curbing located adjacent to paved areas

should be founded in the soil subgrade in order to provide a cutoff to reduce water infiltration into the base course.

9.12. Feasibility of Onsite Stormwater Infiltration

Given the presence of native fine-grained soils (i.e., lean clay) from the ground surface to a depth of at least 30 feet, and the presence of shallow groundwater (e.g., historical high groundwater at a depth of 4 feet), The onsite stormwater infiltration is not considered feasible.

9.13. Soil Corrosion

The corrosion potential of the on-site materials to buried concrete and steel was evaluated based on laboratory testing. Table 11 below presents the results of the corrosivity testing.

**Table 11
 Corrosivity Test Results**

Boring ID	Sample ID	Depth (feet)	pH CTM 643	Minimum Resistivity (ohm-cm) CTM 643	Soluble Sulfate Content (ppm / %) CTM 417	Soluble Chloride Content (ppm / %) CTM 422
Tt-1	SK-1	0-5	9.1	3,458	22/0.0022	20/0.0020
Tt-2	SPT-3	10-11.5	7.9	1,010	510/0.0510	25/0.0025

Per 2019 CBC, Section 1904.1, concrete subject to exposure to sulfates shall comply with the requirements set forth in ACI 318, Section 19.3. Based on the measured water-soluble sulfate results the exposure of buried concrete to sulfate attack should be considered “not a concern”, i.e., exposure class S0 per ACI 318, Table 19.3.1.1. Consequently, injurious sulfate attack is not a concern for concrete with a minimum 28-day compressive strength of 2,500 psi.

Per 2019 CBC, Section 1904.1, concrete reinforcement should be protected from corrosion and exposure to chlorides in accordance with ACI 318, Section 19.3.

The evaluation of potential for corrosion of buried metals was based on the minimum resistivity per NACE (1984) and our experience with similar soils. The on-site soils are anticipated to have a “moderately corrosive” potential to buried ferrous metals. A corrosion specialist should be consulted regarding suitable types of piping and necessary protection for underground metal conduits. The corrosion potential of the on-site soils should be verified during construction for each encountered soil type. Imported fill materials should be tested prior to placement to confirm that their corrosion potential is not more severe than the one assumed for the project.

9.14. Drainage Control

The intent of this section is to provide general information regarding the control of surface water. The control of surface water is essential to the satisfactory performance of the building

construction and site improvements. Surface water should be controlled so that conditions of uniform moisture are maintained beneath and adjacent to the structure, even during periods of heavy rainfall. The following recommendations should be considered as minimal.

- Ponding and areas of low flow gradients should be avoided.
- Paved surfaces within 10 feet from the building foundation should be provided with a gradient of at least 2 percent sloping away from improvements.
- Bare soil, e.g., planters, within 10 feet of the structure should be sloped away from the improvement at a gradient of 5 percent.
- Positive drainage devices, such as graded swales, paved ditches, and/or catch basins should be employed to accumulate and convey water to appropriate discharge points.
- Concrete walks and flatwork should not obstruct the free flow of surface water.
- Area drains should be recessed below grade to allow free flow of water into the basin.
- Enclosed raised planters should be sealed at the bottom and provided with an ample flow gradient to a drainage device. Recessed planters and landscaped areas should be provided with area inlet and subsurface drainpipes.
- To the extent practicable, planters should not be located adjacent to the structure. If planters are to be located adjacent to the structure, the planters should be positively sealed, should incorporate a subdrain, and should be provided with free discharge capacity to a drainage device.
- Planting areas at grade should be provided with positive drainage. Wherever possible, the grade of exposed soil areas should be established above adjacent paved grades. Drainage devices and curbing should be provided to prevent runoff from adjacent pavement or walks into planted areas.
- Gutter and downspout systems should be provided to capture discharge from roof areas. The accumulated roof water should be conveyed to an off-site disposal area by a pipe or concrete swale system.
- Landscape watering should be performed judiciously to preclude either soaking or desiccation of soils. The watering should be such that it just sustains plant growth without excessive infiltration. Sprinkler systems should be checked periodically to detect leakage and irrigation efforts should be reduced or halted during the rainy season.

10. GENERAL SITE GRADING RECOMMENDATIONS

The intent of this section is to provide general information regarding the site grading. Site grading operations should conform with applicable local building and safety codes and to the rules and regulations of those governmental agencies having jurisdiction over the subject construction.

The grading contractor is responsible for notifying governmental agencies, as required, the Geotechnical Engineer at the start of site cleanup, at the initiation of grading, and any time that grading operations are resumed after an interruption. Each step of the grading should be accepted in a specific area by the Geotechnical Engineer, and where required, should be approved by the applicable governmental agencies prior to proceeding with subsequent work.

The following site grading recommendations should be regarded as minimal. The site grading recommendations should be incorporated into the project plans and specifications.

1. Prior to grading, existing vegetation, trash, surface structures and debris should be removed and disposed off-site at a legal dumpsite. Any existing utility lines, or other subsurface structures which are not to be utilized, should be removed, destroyed, or abandoned in compliance with current governmental regulations.
2. Subsequent to cleanup operations, and prior to initial grading, a reasonable search should be made for subsurface obstructions and/or possible loose fill or detrimental soil types. This search should be conducted by the contractor, with advice from and under the observation of the Geotechnical Engineer.
3. Prior to the placement of fill or foundations within the building area, the site should be prepared in accordance with the recommendations presented in the section “Site Preparation” of this report. All undocumented fill or disturbed soils within the building areas should be removed and processed as recommended by the Geotechnical Engineer.
4. The exposed subgrade and/or excavation bottom should be observed and approved by the Geotechnical Engineer for conformance with the intent of the recommendations presented in this report and prior to any further processing or fill placement. It should be understood that the actual encountered conditions may warrant excavation and/or subgrade preparation beyond the extent recommended and/or anticipated in this report.
5. On-site inorganic granular soils that are free of debris or contamination are considered suitable for placement as compacted fill. Any rock or other soil fragments greater than 3 inches in size should not be placed within 5 feet of the foundation subgrade.
6. Any imported fill material required for backfill or grading should be tested and approved prior to delivery to the site.
7. Visual observations and field tests should be performed during grading by a Geotechnical Engineer. This is necessary to assist the contractor in obtaining the proper moisture content and required degree of compaction. Wherever, in the opinion of the Geotechnical Engineer,

an unsatisfactory condition is being created in any area, whether by cutting or filling, the work should not proceed in that area until the condition has been corrected.

11. DESIGN REVIEW AND CONSTRUCTION MONITORING

Geotechnical review of plans and specifications and participation during construction are an integral part of the geotechnical design practice. The following sections present our recommendations relative to the review of construction documents and the monitoring of construction activities.

11.1. Plans and Specifications

Upon completion, the civil, structural, and shoring design plans and specifications should be reviewed and approved by Tetra Tech prior to submittal for issuance of grading and construction permit and prior to bidding of construction tasks as the geotechnical recommendations may need to be re-evaluated based on the actual design configuration and loads. This review is necessary to evaluate whether the recommendations contained in this report have been incorporated into the project plans and specifications as intended.

11.2. Construction Monitoring

The objective of the construction quality assurance (CQA) is to assist in the construction of the soils and soils-structure interaction components of the project. Continuous observation of site excavation, processing and assessment of fill materials, fill placement, ground improvement installation, and other site grading operations by a representative of the Geotechnical Engineer should be implemented during construction to allow for evaluation of the geotechnical-related conditions as they are encountered. This process provides the Geotechnical Engineer with the opportunity to recommend appropriate revisions as needed.

11.3. Grading Observations

The Geotechnical Engineer should observe the excavation, subgrade preparation for building foundations, concrete slabs, pipelines, and pavements, and fill placement so that appropriate modifications to the design, extent, or procedure may be provided, as necessary, should conditions encountered during grading differ from the design assumptions.

11.4. Foundation Subgrade Observations

The Geotechnical Engineer should observe and evaluate the presence of satisfactory materials at the mat foundation subgrade. The foundations excavations should be observed by the Geotechnical Engineer to verify if soft or loose soils or other unsatisfactory materials are encountered, and whether or not such materials should be removed and replaced with compacted fill prior to pouring the mat foundation.

11.5. Pavement Construction Observations

Preparation of the pavement subgrade and the placement of base course and pavement sections should be observed by the Geotechnical Engineer. Careful observation is recommended to

evaluate that the pavement subgrade is uniformly compacted, and the recommended pavement and base course thicknesses are achieved.

11.6. Construction Quality Assurance Reporting

The following list is intended to provide basic minimum guidelines for the reporting during the excavation and backfilling operations:

- A Daily Field Report should be generated each time a representative of the Geotechnical Engineer is performing QA work at the site.
- The Daily Field Reports should contain, at a minimum, a detailed description of the field activities, utilized equipment, areas of work, date, time, weather, and locations and results of all observations and performed tests.
- Provisions should be made for vertical and horizontal control for recording observations and test locations.
- A complete set of Daily Field Reports should be submitted as a part of formal final reporting.

12. LIMITATIONS

The recommendations and opinions expressed in this report are based on Tetra Tech’s review of background documents and on information obtained from field explorations and associated laboratory testing. It should be noted that this study did not evaluate the possible presence of hazardous materials on any portion of the site.

Due to the limited nature of the field explorations, conditions not observed and described in this report may be present on the site. Uncertainties relative to subsurface conditions can be reduced through additional subsurface exploration. Additional subsurface evaluation and laboratory testing can be performed upon request. It should be understood that conditions different from those anticipated in this report may be encountered during grading operations, for example, the extent of unsuitable soil and the associated additional effort required to mitigate them.

Site conditions, including groundwater level, can change with time as a result of natural processes or the activities of man at the subject site or at nearby sites. Changes to the applicable laws, regulations, codes, and standards of practice may occur as a result of government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Tetra Tech has no control. Therefore, this report should be reviewed and recertified by Tetra Tech if it were to be used for a project design commencing more than one year after the date of issuance of this report.

Tetra Tech’s recommendations for this site are, to a high degree, dependent upon appropriate quality control of subgrade preparation, fill placement, and foundation construction. Accordingly, the recommendations are made contingent upon the opportunity for Tetra Tech to observe grading operations and foundation excavations for the proposed construction. If parties other than Tetra Tech are engaged to provide such services, such parties are automatically assuming complete responsibility as the Geotechnical Engineer of Record for the project and are deemed concurring with the recommendations in this report or are obligated to provide alternative recommendations.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Tetra Tech should be contacted if the reader requires additional information or has questions regarding the content, interpretations presented, or completeness of this document. Reliance by others on the data presented herein or for purposes other than those stated in the text is authorized only if so permitted in writing by Tetra Tech. It should be understood that such an authorization may incur additional expenses and charges.

Tetra Tech has endeavored to perform its evaluation using the degree of care and skill ordinarily exercised under similar circumstances by reputable geotechnical professionals with experience in this area in similar soil conditions. No other warranty, either expressed or implied, is made as to the conclusions and recommendations contained in this report.

Appendix A

Logs of Exploratory Borings

Appendix A

Logs of Exploratory Borings

Bulk and relatively undisturbed drive samples were obtained in the field during our subsurface evaluation. The samples were tagged in the field and transported to our laboratory for observation and testing. The drive samples were obtained using the California Split Barrel Drive and Standard Penetration Test (SPT) sampler as described below.

California-Type Split Barrel Drive Sampler

The split barrel drive sampler was driven with a 140-pound hammer allowed to drop freely 30 inches. The number of blows per foot recorded during sampling is presented in the logs of exploratory borings. The sampler has external and internal diameters of approximately 3.0 and 2.4 inches, respectively, and the inside of the sampler is lined with 1-inch-long brass rings. The relatively undisturbed soil sample within the rings is removed, sealed, and transported to the laboratory for observation and testing.

Standard Penetration Test Sampler

The standard penetration test sampler is driven with a 140-pound hammer allowed to drop freely 30 inches in general accordance with ASTM D1586. The number of blows (N-value) required to drive the SPT sampler 12 inches is shown on the boring logs. The sampler has external and internal diameters of approximately 2.0 and 1.4 inches respectively. The sampling tube consists of an unlined split-tube barrel. The disturbed soil sample is removed, sealed, and transported to the laboratory for testing.

Appendix B

Results of Laboratory Testing

Appendix B

Results of Current Laboratory Testing

Classification

Soils were visually and texturally classified in accordance with the Unified Soil Classification System. Soil classifications are indicated on the logs of the exploratory borings in Appendix A.

In-Place Moisture and Dry Density Tests

The moisture contents and dry densities of relatively undisturbed samples obtained from the exploratory boreholes were evaluated in general accordance with the latest version of ASTM D2937. The test results are presented on the log of the exploratory borings in Appendix A.

Percent Passing #200 Sieve

An evaluation of the percent passing #200 sieve for selected soil samples were performed in general accordance with ASTM D1140. The results of the analysis are presented the borehole logs in Appendix A and in the back of this Appendix B.

Atterberg Limits Tests

Liquid Limit, Plastic Limit, and Plasticity Index of selected and representative on-site materials were performed in general accordance with ASTM D4318. The results of this test are presented on the borehole logs in Appendix A and in the back of this Appendix B.

Consolidation Tests

Consolidation tests were performed on selected relatively undisturbed soil samples in general accordance with the latest version of ASTM D2435. The samples were inundated during testing to represent adverse field conditions. The percent consolidation for each load cycle was recorded as a ratio of the amount of vertical compression to the original height of the sample. Load versus deformation curves are presented in the back of this Appendix B.

Direct Shear Tests

The sample were tested under three different normal loads. The samples were sheared at a constant rate of strain selected in general accordance with the consolidation characteristics of the soils (Section 7.3 of ASTM D3080). The samples were inundated during shearing to represent potentially adverse field conditions. The strain rate used for shear tests was 0.002 inches per minute. Shearing of the specimens was continued until the shear stress became essentially constant or until a deformation of approximately 10 percent of the original diameter had been reached. The results of 3-point direct shear tests are presented in the back of this Appendix B.

Corrosivity Series

The corrosivity of selected samples was evaluated in general accordance with the latest version of California Test Method (CTM) No. 417, 422 and 643. The results of these tests are presented in Table 11 in the report and in the back of this Appendix B.

Alameda

Latitude, Longitude: 37.346191, -121.937395

Date	5/5/2022, 5:13:42 PM
Design Code Reference Document	ASCE7-16
Risk Category	II
Site Class	E - Soft Clay Soil

Type	Value	Description
S_S	1.5	MCE_R ground motion. (for 0.2 second period)
S_1	0.6	MCE_R ground motion. (for 1.0s period)
S_{MS}	null -See Section 11.4.8	Site-modified spectral acceleration value
S_{M1}	null -See Section 11.4.8	Site-modified spectral acceleration value
S_{DS}	null -See Section 11.4.8	Numeric seismic design value at 0.2 second SA
S_{D1}	null -See Section 11.4.8	Numeric seismic design value at 1.0 second SA

Type	Value	Description
SDC	null -See Section 11.4.8	Seismic design category
F_a	null -See Section 11.4.8	Site amplification factor at 0.2 second
F_v	null -See Section 11.4.8	Site amplification factor at 1.0 second
PGA	0.508	MCE_G peak ground acceleration
F_{PGA}	1.192	Site amplification factor at PGA
PGA_M	0.605	Site modified peak ground acceleration
T_L	12	Long-period transition period in seconds
$SsRT$	2.027	Probabilistic risk-targeted ground motion. (0.2 second)
$SsUH$	2.112	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration
SsD	1.5	Factored deterministic acceleration value. (0.2 second)
$S1RT$	0.756	Probabilistic risk-targeted ground motion. (1.0 second)
$S1UH$	0.809	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration.
$S1D$	0.6	Factored deterministic acceleration value. (1.0 second)
$PGAd$	0.508	Factored deterministic acceleration value. (Peak Ground Acceleration)
C_{RS}	0.96	Mapped value of the risk coefficient at short periods
C_{R1}	0.935	Mapped value of the risk coefficient at a period of 1 s

Unified Hazard Tool

Please do not use this tool to obtain ground motion parameter values for the design code reference documents covered by the [U.S. Seismic Design Maps web tools](#) (e.g., the International Building Code and the ASCE 7 or 41 Standard). The values returned by the two applications are not identical.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

**2665 The Alameda
Santa Clara, California**

Prepared for:

Kapital Partners, LLC

Prepared by:

Tetra Tech
17885 Von Karman Ave, Suite 500
Irvine, CA 92614

May 30, 2022

EXECUTIVE SUMMARY

Tetra Tech performed a Phase I Environmental Site Assessment (ESA) on behalf of Kapital Partners, LLC for the property located at 2665 The Alameda, Santa Clara, California (Subject Property; Figure 1). This Phase I ESA was completed to aid in the potential purchase of the Subject Property for development of student housing. This Phase I ESA was completed in general accordance with American Society for Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, E1527-13 and E1527-21* as well as All Appropriate Inquiries Final Rule 40 Code of Federal Regulations Part 312. The objective of this Phase I ESA is to identify Recognized Environmental Conditions (RECs), Historical RECs (HRECs), and Controlled RECs (CRECs) that affect the Subject Property.

The Subject Property is located at 2665 The Alameda and consists of a triangular parcel of fenced, vacant land in the city of Santa Clara and is identified by the Assessor Parcel Number 230-12-012. The Subject Property is bordered by The Alameda to the northeast, Park Avenue to the west, Bellomy Street to the northwest, and a Safeway parking lot to the south. Adjacent properties of note include various residence halls of Santa Clara University located to the east and northeast of the Property; a preschool and childcare center, Kids on Campus, to the northwest; University Cleaners to the southwest; and Pizza My Heart to the west.

To assess environmental conditions at the Subject Property, Tetra Tech reviewed land use history, geology, hydrogeology, and environmental records for the Subject Property and its general vicinity; conducted a visual site reconnaissance; and reviewed the completed questionnaires. During the course of performing this Phase I ESA, Tetra Tech identified the following RECs:

ASTM defines a REC as:

(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

The Subject Property is an active Leaking Underground Storage Tank (LUST) cleanup site under the San Francisco Bay Regional Water Quality Control Board (RWQCB). A former UNOCAL branded service station operated on the Subject Property from approximately 1930 to 1993. Site features included a station building, three product dispenser islands, four USTs, one waste oil UST, and a clarifier. In March 1993, the service station ceased operations and all above- and below-ground facilities were removed. Site assessments performed at the Subject Property since 1988 revealed petroleum hydrocarbon impacts to soil, soil vapor, and groundwater. A groundwater monitoring well network consisting of groundwater monitoring wells installed at and to the north of the Subject Property has been gauged and sampled generally on a quarterly basis since 1991. The groundwater flow direction beneath the Subject Property is predominantly to the north-northwest with a high variability in groundwater elevations since groundwater monitoring began. Remediation activities at the Subject

Property have included the use of absorbent socks, soil excavation, soil vapor extraction, groundwater extraction and treatment, injection of oxygen release compound to enhance bioremediation, biosparging, ozone sparging, and sulfate applications. A request for closure was made in May 2020 under the Low-Threat Underground Storage Tank Case Closure Policy; however, the RWQCB has not granted closure for the Subject Property. The results of the latest groundwater monitoring event conducted in March 2022 indicates significant petroleum impacts remain on the Subject Property and have migrated offsite to the northwest. The presence of petroleum products at the Subject Property due to a release and the lack of regulatory closure is considered a REC.

ASTM defines an HREC as:

A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.

The HREC identified during the completion of this Phase I ESA is as follows:

A former gasoline service station located at 700 Bellomy Street (currently Pizza My Heart) is immediately west of the Subject Property across Park Avenue. A 2,500-gallon and a 750-gallon UST containing diesel/gasoline were discovered during excavation activities within the sidewalk of Park Avenue in 1994. Elevated concentrations of petroleum hydrocarbons were detected in soil samples collected from beneath the USTs and in groundwater. Three groundwater monitoring wells were installed at the northern portion of the property and within Park Avenue. The last groundwater monitoring event at this property was conducted in April 2002. Total Petroleum Hydrocarbons as gasoline (TPHg) was detected in groundwater samples at concentrations up to 2,630 micrograms per liter ($\mu\text{g/L}$) and benzene was detected in groundwater samples at concentrations up to 15.7 $\mu\text{g/L}$. The facility received a case closure letter from the Santa Clara Valley Water District on June 26, 2002 with the advisory that moderate levels of residual soil contamination exist in the vicinity of the former tank system beneath the sidewalk along Park Avenue. The release from the UST is considered a HREC as the petroleum impacts associated with the release from the property may have affected the Subject Property; however, the impacts have been addressed to the satisfaction of the regulatory authority.

ASTM defines a CREC as:

A recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

No CRECs were identified during the completion of this Phase I ESA.

1.0 INTRODUCTION

1.1 PURPOSE

Tetra Tech performed a Phase I Environmental Site Assessment (ESA) on behalf of Kapital Partners, LLC (Kapital Partners; the User) for the property located at 2665 The Alameda, Santa Clara, California (Subject Property). This Phase I ESA was completed for the potential purchase and development of the Subject Property as student housing. This Phase I ESA was completed in general accordance with American Society for Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, E1527-13 and E1527-21* as well as the All Appropriate Inquiries Final Rule 40 Code of Federal Regulations Part 312. The objective of this Phase I ESA is to identify Recognized Environmental Conditions (RECs), Historical RECs (HRECs), and Controlled RECs (CRECs) that affect the Subject Property.

1.2 SCOPE OF SERVICES

The scope of services was defined by Tetra Tech's proposal for the Subject Property dated December 8, 2021. The scope included a regulatory database review, historical and physical record review, interviews, a visual non-invasive site reconnaissance of the Subject Property and adjoining land, and preparation of this report.

1.3 SIGNIFICANT ASSUMPTIONS

Tetra Tech assumes that all information obtained from others for the Subject Property is correct and complete. Additionally, Tetra Tech assumes that the User provided Tetra Tech with all reasonably ascertainable prior environmental information concerning the Subject Property and that the User will read this report in its entirety.

1.4 LIMITATIONS AND EXCEPTIONS OF ASSESSMENTS

The findings and conclusions presented in this report are based on the procedures described in ASTM Practice *E1527-13 and E1527-21*. This report was prepared based on a review of data, as described therein, in accordance with generally accepted professional practices, applicable to work of similar nature and complexity of similar localities, at the time the services were performed. The scope of this report is limited in nature and intended to provide an evaluation of the current environmental conditions at the Subject Property at the time of the report preparation and does not constitute definitive review of all the potential environmental impairments and situations not otherwise ascertainable from the available information and observation.

It is important to recognize that even the most comprehensive scope of services may not detect all the environmental liabilities at a particular site. Therefore, nothing herein shall be construed as a representation or certification that the Subject Property is either fully characterized or is free of environmental impairments and/or contamination. This Phase I ESA conforms to the level of documentation required in ASTM Practice *E1527-13 and E1527-21*.

To prepare this report, Tetra Tech relied on information as discussed in the report, which it believes to be reliable (refer also to the Environmental Risk Information Services, Inc. [ERIS] Disclaimer, Appendix A).

Tetra Tech has endeavored to meet what it believes is the applicable standard of care for the services performed and, in doing so, is obliged to advise Kapital Partners of Phase I ESA limitations. Tetra Tech believes that providing information about limitations is essential to help clients identify and thereby manage risks.

This Phase I ESA did not include any inquiry with respect to radon, methane, asbestos-containing material, lead-based paint, lead in drinking water, formaldehyde, endangered species, wetlands, subsurface investigation activities or other services or potential conditions or features not specifically identified and discussed herein. It is noted that inquiry into the above environmental issues are not required to meet ASTM Standard *E1527-13 and E1527-21*. In those instances where additional services or service enhancements are included in the report as requested or authorized by the client, specific limitations attendant to those services are presented in the text of the report.

This report represents Tetra Tech's service to Kapital Partners as of the report date. In that regard, the report constitutes Tetra Tech's final document, and the text of the report may not be altered in any manner after final issuance of the same. Opinions relative to environmental conditions given in this report are based on information derived from the most recent site reconnaissance and from other activities described herein. Kapital Partners is herewith advised that the conditions observed by Tetra Tech are subject to change. Certain indicators of the presence of hazardous materials may have been latent or not present at the time of the most recent site reconnaissance and may have subsequently become observable. In a similar manner, the research effort conducted for a Phase I ESA is limited.

Further, the services herein shall in no way be construed, designed, or intended to be relied upon as legal interpretation or advice.

1.5 USER RELIANCE

This report is an instrument of service of Tetra Tech and includes research and a review of specified and reasonably ascertainable information and a reconnaissance of the Subject Property to identify RECs in general accordance with ASTM Standard *E1527-13 and E1527-21*. Tetra Tech's Phase I ESA was performed in accordance with generally accepted practices of the profession undertaken in similar studies at the same time and in the same geographical area, and Tetra Tech observed that degree of care and skill generally exercised by the profession under similar circumstances and conditions.

A User is defined by ASTM Practice *E1527-13 and E1527-21* as the party seeking to use Practice *E1527-13 and E1527-21* to complete an ESA of a Subject Property and may include a potential purchaser of land in the property, a potential tenant of the property, an owner of the property, a lender, or a property manager. The scope of services and the report have been completed on behalf of and for the exclusive use by Kapital Partners (the User) solely for their use and reliance in the Phase I ESA of the Subject Property Kapital Partners is the only party to which Tetra Tech has explained the risks involved and which has been involved in the shaping of the scope of services needed to satisfactorily manage those risks, if any, from Kapital Partner's point of view.

Accordingly, Tetra Tech's findings and opinions related in this report may not be relied upon by any party except for Kapital Partners without the consent of Tetra Tech.

2.0 SITE DESCRIPTION

2.1 SUBJECT PROPERTY LOCATION

The Subject Property is located at 2665 The Alameda and consists of a triangular parcel of fenced, vacant land in the city of Santa Clara and is identified by the Assessor Parcel Number 230-12-012 (Figure 1). The Subject Property is bordered by The Alameda to the northeast, Park Avenue to the west, Bellomy Street to the northwest, and a Safeway parking lot to the south. Adjacent properties of note include various residence halls of Santa Clara University located to the east and northeast of the Property; a preschool and childcare center, Kids on Campus, to the northwest; University Cleaners to the southwest; and Pizza My Heart to the west (Figure 2).

2.2 CURRENT USE OF PROPERTY

The Subject Property is currently a vacant dirt lot. The Subject Property is fenced on all sides with an entrance gate located on Park Avenue.

2.3 SITE IMPROVEMENTS

The Subject Property is currently vacant and unimproved. The Subject Property is in a mixed-use commercial/residential area in Santa Clara, California. Santa Clara lies south of the San Francisco Bay, between the cities of San Jose and Sunnyvale, California. The Subject Property was previously used as a gas station; however, the USTs and any associated features have been removed. Numerous soil vapor extraction and groundwater monitoring wells remain on the Subject Property. The Subject Property has fencing on all sides. A paved sidewalk is present on all sides of the Subject Property boundary, except the southeast where a parking lot is located.

2.4 CURRENT USES OF ADJOINING PROPERTIES

The term adjoining property, as defined by the ASTM standard, means properties that border or are contiguous or partially contiguous with the Subject Property, or would be so but for a street, road, or other public thoroughfare separating them. The adjoining properties include a preschool to the northwest, various student residence halls to the north and northeast, commercial establishments to the west and southwest, a drycleaner (University Cleaners) is located southwest of the Subject Property and a parking lot is located to the south and southeast.

3.0 USER PROVIDED INFORMATION

3.1 TITLE RECORDS

Title records were not provided to Tetra Tech by Kapital Partners for the Subject Property.

3.2 ENVIRONMENTAL LIENS, ACTIVITIES, OR USE LIMITATIONS

Kapital Partners, as the User of this Phase I ESA, indicated they are not aware of environmental cleanup liens against the Subject Property that are filed or recorded under federal, tribal, state, or local law. Kapital Partners has also indicated based on the past usage of the Subject Property, there may be potential activity use limitations, such as engineering controls, or land use restrictions or institutional controls that are in place on the Subject Property and/or have been filed or recorded in a registry under federal, state, or local law. Kapital Partners responses to the All Appropriate Inquiry User Questionnaire are included in Appendix B and have been incorporated into this Phase I ESA.

3.3 SPECIALIZED KNOWLEDGE

Kapital Partners, as the User of this Phase I ESA, indicated that it does not have any specialized knowledge or experience related to the Subject Property or nearby properties Kapital Partners is not involved in the same line of business as the current or former occupants of the subject property or on adjoining properties so it would have no knowledge of the chemicals and processes used by current or former occupants.

3.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Kapital Partners, as the User of this Phase I ESA, have indicated that it is aware of commonly known or reasonably ascertainable information about the Subject Property that would help the environmental professional to identify conditions indicative of releases or threatened releases. Kapital Partners is aware that the past use of the Subject Property has been for a gasoline station and that remediation activities have taken place, but it is not aware of specific chemicals that are or may have been present on the Subject Property.

3.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Kapital Partners verified the price being paid for the area purchased reasonably reflects the fair market value of the Subject Property.

3.6 OWNER, PROPERTY MANAGER AND OCCUPANT INFORMATION

The Subject Property is owned by Chevron and is currently vacant.

3.7 REASONS FOR PERFORMING PHASE I ESA

The Phase I ESA was requested by Kapital Partners to evaluate existing environmental conditions, if any, as they pertain to the proposed purchase and development of the Subject Property for student housing.

4.0 RECORDS REVIEW

4.1 HISTORICAL USE INFORMATION

The purpose of the record review was to obtain and review reasonably ascertainable records that will help identify RECs. Tetra Tech contracted with ERIS to conduct a search of required federal, state, and tribal databases. A copy of the City Directory, Aerial Maps, Topography Maps, and Physical Settings Report generated on February 28, 2022, is included in Appendix C of this report.

4.1.1 Ownership Information

Owner/occupant questionnaire was not completed by Chevron. Based on the information gathered from various databases including the GeoTracker website, the lack of completed questionnaire is not considered a significant data gap.

4.1.2 Review of Aerial Photographs

Year	Property	Surrounding Properties	Sources
1931	A building is present on the Subject Property	N: CA-82 is present northeast of the Subject Property. There are several paved roads and developments. E: There appears to be construction of a large university building along with other university buildings. S: There appears to be a facility with several buildings immediately south of the Subject Property. Other vacant lots and residential buildings are present further south. W: The area immediately west of the Subject Property is a vacant lot. Further west there are residential buildings.	A(1931)
1939	The Subject Property appears to be in similar configuration to the previous year.	N: The Alameda and Park Avenue are now clearly paved. There are several paved roads and developments further north of the Property E: There appears to be construction of a large university building along with other university buildings. S: The buildings associated with the apparent facility south of the Subject Property are no longer present. A vacant lot further south has been graded. W: Buildings are now present in the lot immediately west of the Subject Property. Further west there are residential buildings.	A(1939)
1948	Several structures are now present on the Subject Property.	N: The area immediately north of the Subject Property consists of many small buildings E: Several university buildings are present in the immediate vicinity of the Subject Property. Other buildings are present further east. S: Several buildings and structures are now present in the lot immediately south of the Subject Property. Residential developments are present further south. W: The lot immediately west of the Subject Property now has several buildings present.	A(1948)

Year	Property	Surrounding Properties	Sources
1956	The Subject Property appears to be in similar configuration to the previous year.	<p>N: Some of the buildings that were present north of the Subject Property have been cleared. The lot north of the Subject Property appears mostly vacant.</p> <p>E: The area immediately east of the Subject Property has a similar configuration to the previous aerials.</p> <p>S: Several buildings are present in the lot immediately south of the Subject Property. The area further south consists of paved roads and residential developments.</p> <p>W: The area immediately west of the Subject Property has a similar configuration to the previous aerial.</p>	A(1956)
1960	A circular structure is now clearly present in the southern portion of the Subject Property. Several small square structures are present in the center of the Subject Property.	<p>N: The area north of the Subject Property appears to be in similar configuration to the previous year, with the exception of the addition of several buildings in the lot to the north.</p> <p>E: The area immediately east of the Subject Property has a similar configuration to the previous year.</p> <p>S: The lot immediately south of the Subject Property appears to have more structures and development than the previous year.</p> <p>W: The area immediately west of the Subject Property has a similar configuration to the previous year.</p>	A(1960)
1965	A rectangular structure is now present in the southern portion of the Subject Property. The square structures in the center of the Subject Property are no longer visible.	<p>N: A parking lot and athletic facility is now clearly present further north of the Subject Property. Several buildings have been constructed immediately north of the Subject Property at the university.</p> <p>E: The area immediately east of the Subject Property has a similar configuration to the previous year.</p> <p>S: The structures present immediately south of the Subject Property have been removed and the Subject Property appears vacant except for a few small structures.</p> <p>W: The area immediately west of the Subject Property has a similar configuration to previous years. Washington Street is now visible further west of the Subject Property.</p>	A(1965)
1968	The Subject Property appears to be in similar configuration to the previous year.	<p>N: The area north of the Subject Property is in similar configuration to previous years.</p> <p>E: The area east of the Subject Property is in similar configuration to previous years</p> <p>S: A large building and a parking lot are now present in the lot immediately south of the Subject Property.</p> <p>W: The area west of the Subject Property is in similar configuration to previous years.</p>	A(1968)
1974	The Subject Property appears to be in a similar configuration as the previous years.	<p>N: The area north of the Subject Property is in similar configuration to previous years except for construction that appears to be taking place in the parking lot adjacent to the athletic facility.</p> <p>E: The area east of the Subject Property is in similar configuration to previous years.</p> <p>S: The area south of the Subject Property is in similar configuration to previous years.</p> <p>W: The area west of the Subject Property is in similar configuration to previous years.</p>	A(1974)
1980	Several structures are visible on the Subject Property.	No significant changes could be discerned in the surrounding properties to the Subject Property.	A(1980)

Year	Property	Surrounding Properties	Sources
1987	The Subject Property appears to be in a similar configuration as the previous years.	N: The area north of the Subject Property is in similar configuration to previous years. E: The lot immediately east of the Subject Property has been cleared. S: The area south of the Subject Property is in similar configuration to previous years. W: The area west of the Subject Property is in similar configuration to previous years.	A(1987)
1993	There does not appear to be any buildings or structures present on the Subject Property.	N: The area north of the Subject Property is in similar configuration to previous years. E: The lot immediately east of the Subject Property appears vacant except for two buildings. S: The area south of the Subject Property is in similar configuration to previous years. W: The area west of the Subject Property is in similar configuration to previous years.	A(1993)
2003	The Subject Property appears to be in a similar configuration as the previous years.	N: The area north of the Subject Property is in similar configuration to previous years. E: The lot immediately east of the Subject Property now has several buildings and parking lots. Another baseball field has been constructed in the athletic facility. S: The area south of the Subject Property is in similar configuration to previous years. W: The area west of the Subject Property is in similar configuration to previous years.	A(2003)
2005	The Subject Property appears to be in a similar configuration as the previous years.	No significant changes could be discerned in the surrounding properties to the Subject Property.	A(2005)
2010	The Subject Property appears to be in a similar configuration as the previous years.	No significant changes could be discerned in the surrounding properties to the Subject Property.	A(2010)
2012	The Subject Property appears to be in a similar configuration as the previous years.	No significant changes could be discerned in the surrounding properties to the Subject Property.	A(2012)
2014	The Subject Property appears to be in a similar configuration as the previous years.	No significant changes could be discerned in the surrounding properties to the Subject Property.	A(2014)
2016	The Subject Property appears to be in a similar configuration as the previous years.	No significant changes could be discerned in the surrounding properties to the Subject Property.	A(2016)
2018	The Subject Property appears to be in a similar configuration as the previous years.	No significant changes could be discerned in the surrounding properties to the Subject Property.	A(2018)
2020	The Subject Property appears to be in a similar configuration as the previous years.	No significant changes could be discerned in the surrounding properties to the Subject Property.	A(2020)

N= North, E = East, S = South, W = West

Sources:

A = aerial photograph (year in parentheses)

NA = not applicable (no sources found)

No RECs were specifically identified from review of historical aerial photographs.

4.1.3 Review of Topographic Maps

A review of U.S. Geological Survey topographic maps was conducted for the years 1889, 1897, 1899, 1953, 1961, 1968, 1973, 1980, and 2015. The 1889 Quadrangle includes the Monterey Line Railway, which runs from the northwest to the southeast in relation to the Subject Property. The Guadalupe River is also visible northeast of the Subject Property. Building developments are present to the west and to the southeast of the Subject Property. No significant changes could be discerned on the 1897 and 1899 Quadrangles from the 1889 Quadrangles. There are significant developments in the vicinity around the Subject Property on the 1953 Quadrangle. Santa Clara University and San Jose Municipal Airport are now visible north of the Subject Property. The lot immediately east of the Subject Property has water tanks, buildings, and athletic fields present. With the exception of building developments, no significant changes could be discerned on the 1961 Quadrangle. The 1968 Quadrangle shows the development of several buildings in the lots east and north of the Subject Property. No significant changes were noted in the 1973, 1980, and 2015 Quadrangles.

4.1.4 Review of City Directories

A review of city directories for the years 1930, 1935, 1940, 1945, 1950, 1955, 1961, 1966, 1971, 1976, 1981, 1987, 1990-1991, 1995-1996, 2001-2002, 2006, 2012, 2016, and 2020 was performed for 2550-2710 of The Alameda, 2850-3000 of Park Avenue and 700-799 of Bellomy Street. The results of the city directory search indicate mixed use of commercial and residential listings. Gas stations were listed at 2725 The Alameda from 1935 through 1955 under the names of Union Service Station (1935, 1940, and 1945), Rosensweig Henry gas station (1950), Faler's Union gas station (1955) and at 2665 The Alameda from 1961 through 1987 (inferred from the 1971 listing) under University Union Service (1961, 1966, 1971, 1976, 1981, 1987). Pacific Manufacturing was listed at 2610 The Alameda in 1935, 1940, 1945, 1950, 1955, and 1961.

4.2 PHYSICAL SETTING INFORMATION

The Subject Property is located within the Santa Clara Valley. The Santa Clara Valley is confined on the west by the Santa Cruz Mountains Coast Range and the east by the Diablo Range. The Valley is an alluvial basin that deposits into the San Francisco Bay to the north. Two major faults run along the basin, the San Andreas fault to the west and the Hayward and Calaveras faults to the east. The Valley is filled with Jurassic-aged volcanic and metamorphic rocks, Franciscan Complex and Coast Range ophiolite complex, which are in turn overlain by Pliocene-age marine strata of the Monterey Formation. Surficial deposits include Pliocene and younger non-marine strata, which are widespread in outcrops and in the subsurface of the southwestern Santa Clara Valley, include the Pliocene and Pleistocene Santa Clara Formation and overlying, unnamed Quaternary deposits.

Regionally, the Subject Property lies within the Santa Clara Subbasin of the Santa Clara Valley Groundwater Basin which has a surface area of approximately 240 square miles and is made up of permeable valley fill alluvium. The Subbasin's eastern and western geologic boundaries are formed by the impermeable bedrock of the Diablo Range and Santa Cruz Mountains, respectively. The Subbasin's northern geologic boundary is formed by contact with low permeability bay mud deposits

at San Francisco Bay, and the southern geologic boundary is the Coyote Narrows south of the City of San Jose. The Subbasin is filled with alluvium that has washed down from the surrounding mountains and range in thickness from about 200 feet along the Valley's edges to over 1,300 feet in the Valley's interior. The water-bearing formations of the Subbasin include the Santa Clara Formation and the Quaternary deposits which are the most important water-bearing units in the Subbasin. The permeability of the Valley alluvium is generally high and principally all large production wells derive their water from it (DWR 1975).

Previous assessments conducted on the Subject Property indicate soils in the vicinity consist primarily of clays interbedded with silts and silty sands to a depth of approximately 22 feet below ground surface (bgs). Soils observed from approximately 22 to 40 feet bgs consisted primarily of silty sands interbedded with silts. Silts and clayey silts with sand, fine sands, and gravelly sands interbedded with silty clays and gravelly clays were generally observed from 40 to 55 feet bgs. Silty clay and clayey silt were observed below 55 feet bgs (IT 2001). The Physical Settings Report from ERIS is included in Appendix A.

4.3 REGULATORY REVIEW

The purpose of the record review is to obtain and review reasonably ascertainable records that will help identify RECs. For this review, records were obtained from ERIS under order number 22022400175 on February 28, 2022 (ERIS 2022). The ERIS report is included in Appendix A. As noted under ASTM, information requested and not received within 20 days after the report date is not required to be incorporated into Phase I ESA reports. Remaining regulatory support data will be maintained with the Tetra Tech project file. The ERIS search area, as shown on ERIS Area/Corridor Report located in Appendix A, includes the Subject Property plus a minimum 1-mile radius.

4.3.1 Federal Database Information

Federal databases were searched for environmental records associated with the Subject Property and adjoining properties within a 1-mile radius, as listed in Table 1.

SEMS List 8R Archive Sites (SEMS ARCHIVE). The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. There are two archive sites listed on this database.

The *Santa Clara University* at 820 Alviso Street, 0.12 miles southwest of the Subject Property is listed on the SEMS Archive. The *PG&G Gas Plant Santa Clara* located at COR Benton and Railroad Avenue, 0.48 miles north of the Subject Property is also listed on the Archive. However, based on the nature of the listings, these facilities are not considered a REC to the Subject Property.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS). CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA. The two archive sites listed on SEMS Archive Sites are also listed on this database.

The *Santa Clara University* at 820 Alviso Street, 0.12 miles southwest of the Subject Property is listed on the database. The *PG&G Gas Plant Santa Clara* located at COR Benton and Railroad Avenue, 0.48 miles north of the Subject Property is also listed on the database. However, based on the nature of the listings, these facilities are not considered a REC to the Subject Property.

CERCLIS – No Further Remedial Action Planned (CERCLIS NFRAP). An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site. There two archive sites listed on SEMS Archive Sites are also listed on this database.

The *Santa Clara University* at 820 Alviso Street, 0.12 miles southwest of the Subject Property is listed on the database. The *PG&G Gas Plant Santa Clara* located at COR Benton and Railroad Avenue, 0.48 miles north of the Subject Property is also listed on the database. However, based on the nature of the listings, these facilities are not considered a REC to the Subject Property.

Resource Conservation and Recovery Act (RCRA) Corrective Action Report. The Resource Conservation and Recovery Act (RCRA) Corrective Action Report (CORRACTS) database identifies hazardous waste handlers with RCRA corrective action activity. There are two listings in this database.

FMC Corporation located at 1125 Coleman Avenue, 0.73 miles northeast of the Subject Property is noted as a small quantity generator. ERIS database shows a past release into soil and groundwater. A search on GeoTracker database indicates gasoline contamination at this facility. The Site was cleaned up under the oversight of San Francisco Bay RWQCB and Santa Clara Valley Water District. Although residual contamination exists at this site, the concentrations are below regulatory concern. The site received closure in 2001 and ERIS database shows institutional controls in place. This facility is not considered a REC to the Subject Property.

The *Former ECS* located at 705 Reed Street, 0.97 miles northwest of the Subject Property is listed on the database. The facility is listed as a small quantity generator with minor violations in the past related to facility standard, manifests/records reporting, container use and management. Based on the nature of the listing, this facility is not considered a REC to the Subject Property.

RCRA non-CORRACTS TSD Facilities (RCRA TSD). This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). There are seven listings in this database. None of the listings have any violation records and based on the nature of the listings, they are not considered RECs to the Subject Property.

RCRA Non-Generators (RCRA Non-Gen). The RCRA Non-Generators (RCRA Non-Gen) database includes information on sites that do not presently generate hazardous wastes. There are thirteen facilities within the search area that were listed as non-generators. None of the listed facilities hold records of violations. These listings are not considered RECs to the Subject Property.

Facility Index System/Facility Registry System (FINDS/FRS). The Facility Index System/Facility Registry System (FINDS) database contains both facility information and “pointers” to other sources of information that contain more detail. Four facilities were identified from the FINDS database:

- *Former UNOCAL #715* and *UNOCAL #0715* are located on the Subject Property and are listed on the database with a description of a former gasoline service station. This is further discussed in section 4.3.5. The contamination from the former fuel USTs on-the Subject Property is considered a REC.
- *Stuft Pizza* located at 700 Bellomy Street 0.02 miles west of the Subject Property is listed on the database. This facility is discussed above under ‘EnviroStor Database’. A search on GeoTracker database shows information on UST removal and Site closure. A 2,500 gallon and a 750-gallon UST containing diesel/gasoline were discovered during excavation activities on the sidewalk of Park Avenue in 1994. They were found to be in demolished sections and the tanks were removed in January 1994. Soil samples were collected after the tank excavation at approximately 2 feet below the bottom of the tank as contamination was evident below the tank. Up to 350 ppm of Total Petroleum Hydrocarbons as diesel (TPHd) was detected at 15-16 feet bgs. Excavation of the contaminated soil included a depth of 18 feet below the pavement surface. At this depth, due to apparent instability, the excavation was ceased by the Fire Department. The tank was located close to the intersection of Bellomy street and Park Avenue, adjacent to the west of the Property, across Park Avenue. The groundwater flow is to the north and

- northwest. The closure letter from Santa Clara Valley Water District for this facility indicates moderate levels of residual soil contamination exist in the vicinity of the former underground storage tank system beneath the sidewalk on Park Avenue (adjacent to the Property). This Facility is discussed further in Section 4.3.5. The facility received a case closure status in 2002 and this listing is considered a HREC for the Subject Property based on the proximity, presence of residual contamination and closure status.
- *Zycon Corporation* located at 390 Bellomy Street, is listed on the ERIS database under FINDS and marked adjacent to the Subject Property on the west. However, a search on GeoTracker shows the actual location is 0.2 miles northeast of the Subject Property. Four USTs were located at this Site. A 5,000 gallon and a 10,000-gallon diesel tank were removed in June 1993. A 750 gallon and a 1,500-gallon gasoline tanks were filled with slurry in August 1986. The initial soil samples indicated high levels of TPH once the tanks were removed. The tank pit area was over excavated, and the confirmation sampling indicated low or non-detect values of contamination. The Site received closure in June 1995. This listing is not considered a REC to the Subject Property based on proximity and hydrogeologic settings.

Formerly Used Defense Sites (FUDS). The Formerly Used Defense Sites (FUDS) database includes locations of FUDS properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers. *FMC Corporation* located 0.7 miles northeast of the of the Subject Property is listed on the database. No further information is available on this facility on ERIS database or the GeoTracker database. Based on the distance from the Subject Property and the nature of the listing, this listing is not considered a REC to the Subject Property.

Mineral Resource Data System (MRDS). The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the MRDS of the U.S. Geological Survey and the Mineral Availability System/Mineral Industry Locator System originated in the U.S. Bureau of Mines, which is now part of U.S. Geological Survey. *Hubble Sand and Gravel pit* is located 0.2 miles south southwest of the Subject Property and is associated with production of sand and gravel. *Hubble Quarry and Mill* is located 0.5 miles west of the Subject Property and is associated with Granite mining. These listings as presented are not considered a REC to the Subject Property.

Alternative Fueling Stations (ALT FUELS). A list of alternative fueling stations are made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. The list includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE) locations. There are six listings in this database within the search area around the Subject Property. These listings are not considered a REC to the Subject Property.

4.3.2 State Database Information

California databases was searched for environmental records associated with the Subject Property and adjoining properties within a 1-mile radius, as listed in Table 1.

State Response Sites (RESPONSE). The State Response Sites database identifies confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation.

AJ Commercial Laundry located at 1173-1175 Campbell Avenue, 0.47 miles east of the Subject Property is listed on the database for contamination of groundwater.

The facility has two parcels, each approximately 1.0 acre. The 1175 Campbell Avenue is identified by Santa Clara County Assessor's Parcel Number 23013008. It has 2 warehouse type buildings, which are 19,000 square feet in size. The 1173 Campbell Avenue is identified by Santa Clara County Assessor's Parcel Number 23013009. It has 3 warehouse type buildings, which are 19,000 square feet in size. The buildings on the site were built in 1956/1957. The site is located approximately 4.5 miles northwest of downtown San Jose, California. The surrounding area consists of mixed commercial/industrial and residential developments. DTSC issued an Imminent and Substantial Endangerment Order for the Site on June 27, 2006 after a Site investigation in May 2005 revealed elevated levels of petroleum compounds, metals, and chlorinated volatile organic compounds in the groundwater. In January 2010, a dual-phase extraction system was operated for 9 months, removing contaminated groundwater and soil vapor. In May 2015, another round of extraction started and ran for approximately one year. Groundwater, soil vapor, and soil samples have been collected from the Site at various times since 2005. Further investigation is planned at the Site to evaluate potential off-Site impacts. Based on the hydrogeology and the proximity of the facility, this listing is not considered a REC to the Subject Property.

EnviroStor Database (ENVIROSTOR). The ENVIROSTOR Data Management System provided by the DTSC includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent of the Comprehensive Environmental Response, Compensation and Liability Information System.

Twenty-six sites within the search radius were listed on the ENVIROSTOR database. Some of the listings are discussed in detail:

- *Hadco Santa Clara, Inc.* located at 445 El Camino Real is located 0.31 miles north east of the Subject Property. A search on GeoTracker database indicates the site is currently an unoccupied former auto repair and commercial gasoline service station. An unauthorized release was reported in November 1986 following the removal of two gasoline underground storage tanks (USTs) in July of 1986. An unknown volume of soil was excavated to a depth of 12 feet below grade and disposed of off-site. Several rounds of investigation and sampling, including the installation of 12 monitoring wells, have adequately defined the nature and extent of the contaminant plume. Remediation included soil excavation, completed in 1986, and soil vapor extraction with air sparging conducted between January 2013 and September 2014. The most recent groundwater sampling data report concentrations that satisfy the groundwater criteria of the Low-Threat Case Closure Policy. The facility received case closure as of August 2016.

- *Santa Clara University Physical Plant* located at 731 Campbell Avenue is 0.35 miles northeast of the Subject Property. This approximately 1-acre facility is situated in an industrial area of the city. The site was used in the past variously as a swine farm, a pear storage facility, and a laundry. Subsequently Santa Clara University developed it to its current use in the 60's and purchased it in 1981. Site soils bgs have been found contaminated with TPH (Total Petroleum Hydrocarbons) as gasoline (600 ppm) diesel (2900 ppm), oil and grease (2200 ppm). Due to the presence of leaky underground fuel tanks that were installed by the past operators of the site. The leaky tanks and most of the contaminated site soils have been excavated after determining the extent of contamination and removed for off-site disposal. Post removal sampling indicate substantial reduction of residual contamination (TPH 174). Groundwater has been contaminated with gasoline (12 ppm), diesel (11 ppm), benzene (0.24 ppm), toluene (0.064 ppm), ethylbenzene (0.0015 ppm) and xylene (0.470 ppm). Contamination was discovered by the University in 1980 during tank renovation.
- *Owens Illinois Glass Co* located at 1185 Campbell Avenue, 0.39 miles east of the Subject Property is listed on the database. However, no further information is available on GeoTracker or EnviroStor databases.
- *Custom Food Machinery* located at 1180-1184 Campbell Avenue; 0.43 miles East northeast of the Subject Property is listed on the database. A past usage of this site for industrial machinery manufacturing including the repair of transformers led to contamination of soil and groundwater. A leak resulted from a 5,000-gallon diesel UST at the Site and the tank was removed in June 1991. The Santa Clara Valley Water District recommended case closure based on soil samples collected during tank excavation, over excavation, soil treatment and the relative low permeability of soils encountered in the region. The site cleanup status shows it was closed in August 1992.
- The *TW Smith Plumbing Supply* located at 1200 Campbell Avenue, 0.44 miles east northeast of the Subject Property is listed on the database. A search on EnviroStor database indicates several leaking USTs in the past that were removed. A 1,000 gallon and a 10,000-gallon gasoline tank were removed in 1989. Although contaminants were left in the soil, they were determined to be below the Environmental screening levels and the case received closure in 1995. Additional USTs were removed in 1999 and contamination remains at the site. However, based on soil sampling results from 2000, the Santa Clara Valley Water District granted closure for this case in April 2001.
- *Blue's Roofing Company* located at 1181 Campbell Avenue, 0.45 miles east of the Subject Property is listed on the database. In May 1996, three 2,000-gallon UST (two contained gasoline and one diesel) were removed from the site. Although the tanks appeared to not have holes or damages, the groundwater samples indicated contamination. Annual monitoring of groundwater was conducted until 2011. The Santa Clara Valley Water District staff concluded that the impacted groundwater is restricted to the vicinity of former tanks and the groundwater plume has stabilized. Natural attenuation was assumed to occur based on reducing concentrations in groundwater samples noted over time. Based on these findings, the San Francisco Bay RWQCB issued the following

statement “Residential contamination in both soil and groundwater could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. The District and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation and installation of water wells. This notification shall include a statement that residual contamination exists on the Subject Property and list all mitigation requirement. The levels of residual contamination and any associated site risk are expected to reduce with time” and granted closure to this case in May 2004.

- *Kilman Sales* located at 1179 Campbell Avenue, 0.45 miles east of the Subject Property is listed on the database. A search on the EnviroStor database indicates no records of releases or spills at this facility.
- *AJ Commercial Laundry / All Chem Supply* is located at 1173-1175 Campbell Avenue, 0.47 miles east of the Subject Property. DTSC issued an Imminent and Substantial Endangerment Order for the Site on June 27, 2006 after a Site investigation in May 2005 revealed elevated levels of petroleum compounds, metals, and chlorinated volatile organic compounds in the groundwater. In January 2010, a dual-phase extraction system was operated for 9 months, removing contaminated groundwater and soil vapor. In May 2015, another round of extraction started and ran for approximately one year. Groundwater, soil vapor, and soil samples have been collected from the Site at various times since 2005. The site shows an ‘Active’ cleanup status on the database.
- *Safway* located at 1177 Campbell Avenue, is 0.49 miles east of the Subject Property. Safway is a scaffolding company and there is no record of releases or spills at this site.
- *Variety Metal Finishing, Inc* located at 1166 Campbell Avenue, 0.5 miles east of the Subject Property is listed on the database. The cleanup Status shows “Inactive-Needs Evaluation”. However, no additional information is available on the EnviroStor Database.
- *Santa Clara Police Station* located at 501 El Camino Real, 0.52 miles north northwest of the Subject Property is listed on the database. Coal gas used to power streetlights and to generate electricity was generated on site from 1890s through the 1930s. This led to contamination of soil with lead, nickel, and PAHs. Currently, the site has land use restrictions and the site cleanup status shows “Certified / Operation and Maintenance as of 12/8/2000”.
- *Precision Specialties* located at 1158 Campbell Avenue is 0.54 miles east of the Subject Property. The database does not indicate any records of releases at this facility. However, use of hazardous materials and poor housekeeping practices indicate that the potential for release exists. The potential contaminants include TPHg, TPHd, TCE and PCE.
- *Silicon Valley Microelectronics* located at 1150 Campbell avenue is 0.54 miles east of the Subject Property. No evidence of release was recorded at this facility.
- *Variety Metal Finishing* located at 1166 Campbell Avenue is 0.54 miles east of the Subject Property. During San Jose Fire Department file review, an inspection report for September 1993 revealed that a release of chemicals (cyanide plating bath, nickel sulfate tank) had occurred to secondary containment. Since the site has a tiered permit, it is subject to corrective action. The site has a cleanup status of “Inactive-needs evaluation”.

- *FMC Corporation Ordnance Plant* located at 1125 Coleman Avenue is 0.66 miles northeast of the Subject Property. The site was used from 1905 to 1996 as FMC Corporation. Research, development, and manufacturing of military tracked vehicles was conducted at the site, primarily under U.S. Department of Defense contracts from 1951 to 1996 when the facility closed. The site operated an on-site landfill (1/4-acre) from 1946 to 1979. The 1125 Coleman address consisted of two areas, the North Test Track and the Central Plant. The site is undergoing a Resource Conservation and Recovery Act (RCRA) Facility Investigation pursuant to a Corrective Action Consent Agreement (CACA), Docket HWCA FY 95/96-2002 with the Department of Toxic Substances Control (DTSC). An Interim Remedial Measures Work Plan was approved December 18, 2000 for the Central Plant area. Shallow soil samples detected total petroleum hydrocarbons (TPH) and metals (manganese, hexavalent chromium). Contaminated soil was excavated to industrial standards and disposed off-site. A groundwater investigation is also on-going at the site under DTSC oversight. Identified contaminants included volatile organic compounds (VOCs), total petroleum hydrocarbons (grease and diesel) and metals (arsenic, hexavalent chromium, and manganese). A dual phase extraction (DPE) system, with approximately 80 wells, has been installed. It treats the soil vapor and groundwater with granular-activated carbon units. The treated water is discharged under a NPDES permit.

Based on the proximity and the hydrogeologic settings, the facilities listed under the EnviroStor database are not considered a REC to the Subject Property.

EnviroStor Hazardous Waste Facilities (HWP). The Hazardous Waste Facilities (HWP) database contains detailed information on permitted hazardous waste facilities and corrective action (“cleanups”) tracked in EnviroStor. There are four sites listed on this database and all are located greater than 0.7 miles from the Subject Property. These listings are not considered RECs to the Subject Property.

Leaking Underground Storage Tank (LUST). The Leaking Underground Storage Tank (LUST) database contains leaking underground storage tank listings.

The Subject Property is listed on the database for leaking USTs. The Subject Property is a former Unocal-branded service station located on the southeastern corner at the intersection of The Alameda and Park Avenue in Santa Clara, California. The service station operated from approximately 1930 to 1993. Previous site features included a station building, three product dispenser islands, three underground storage tanks (USTs) to the northwest of the former dispenser islands, one smaller UST near the northwestern corner of the former station building, one waste oil UST near the western edge of the former station building, and a clarifier at the southern corner of the former station building. Historical site activities include the removal and replacement of USTs in 1951 and 1968; repair of a leaking pump coupling that resulted in an estimated release of 2,378 gallons of product in 1964; investigation of evidence of UST leakage in 1968; and repair of a product line leak in 1981 (Arcadis 2020). The total quantity of fuel released is unknown. The contamination from the former LUSTs is considered a REC to the Subject Property.

Stuft Pizza located at 700 Bellomy Street 0.02 miles west of the Subject Property is listed on the database. This facility is discussed above under 'EnviroStor Database'. A search on GeoTracker database shows information on UST removal and Site closure. A 2,500 gallon and a 750-gallon UST containing diesel/gasoline were discovered during excavation activities on the sidewalk of Park Avenue in 1994. They were found to be in demolished sections and the tanks were removed in January 1994. Soil samples were collected after the tank excavation at approximately 2 feet below the bottom of the tank as contamination was evident below the tank. Up to 350 ppm of TPHd was detected at 15-16 feet bgs. Excavation of the contaminated soil included a depth of 18 feet below the pavement surface. At this depth, due to apparent instability, the excavation was ceased by the Fire Department. The tank was located close to the intersection of Bellomy street and Park Avenue, adjacent to the west of the Property, across Park Avenue. The groundwater flow is to the north and northwest. The closure letter from Santa Clara Valley Water District for this facility indicates moderate levels of residual soil contamination exist in the vicinity of the former underground storage tank system beneath the sidewalk on Park Avenue (adjacent to the Property). The facility received a case closure status in 2002 and this listing is considered a HREC for the Subject Property based on the proximity and the presence of residual contamination.

Zycon Corporation located at 390 Bellomy Street, is listed on the ERIS database under LUST and marked adjacent to the Subject Property on the west. However, a search on GeoTracker shows the actual location is 0.2 miles northeast of the Subject Property. Four USTs were located at this Site. A 5,000 gallon and a 10,000-gallon diesel tank were removed in June 1993. Earlier, a 750 gallon and a 1,500-gallon gasoline tanks were filled with slurry in August 1986. The initial soil samples indicated high levels of TPH once the tanks were removed. The tank pit area was over excavated and the confirmation sampling indicated low or non-detect values of contamination. The Site received closure in June 1995. This listing is not considered a REC to the Subject Property based on proximity and hydrogeologic settings.

Santa Clara University located at 2795 The Alameda, 0.07 miles northwest of the Property, is listed on the database. Three USTs were removed from this facility in September 1986. A 6,000 gallon and a 4,000-gallon gasoline tank; and a 400-gallon waste oil tank. Although some residual contamination is present at this facility, the site received case closure in November 1999. Based on hydrogeology and proximity, this listing is not a REC to the Subject Property.

Musso Property located at 2491 The Alameda, 0.14 miles east southeast of the Subject Property is listed as LUST cleanup site. Three 1,000-gallon tanks containing gasoline were removed in January 1984. Severe corrosion of the tanks led to contamination of soil and groundwater. Soil samples were not taken at the time of tank removal since it was not required during that time period. However, site investigations began in 1990 and the contamination appears to be localized. After remedial activities, the site still contains residual TPH in the soil and shallow groundwater beneath the site. The site received closure in April 1999. Based on the localized contamination and the proximity to the Subject Property, this listing is not considered a REC.

Gasco 007 located at 2391 The Alameda, 0.18 miles east southeast of the Subject Property is listed as a LUST cleanup site. Three 5,000-gallon USTs and one 12,000-gallon UST containing gasoline were removed in 1992. This was followed by over excavation of soil to a depth of 29 feet bgs. Based on

groundwater monitoring results over time, the Santa Clara Valley Water District concluded that the plume is adequately characterized and relatively stable. The site received closure in January 1999 with a note indicating residual petroleum hydrocarbon contamination in groundwater is present beneath the site and likely off-site. However, the contamination is localized. This listing is not a REC to the Subject Property.

Highway 82 Segment 5 located at 2245 The Alameda, 0.24 miles east southeast of the Subject Property is listed as a LUST cleanup site. Three USTs with unknown contents were removed in October 1994. Residual contamination present on the site includes TPHg and the facility received case closure in September 2008. Based on the closure status and the proximity, this listing does not constitute a REC to the Subject Property.

The remaining listings on the LUST database all have case closure status and are located over 0.3 miles from the Subject Property. Based on the proximity and the hydrogeologic settings in the region, these listings are not considered a REC to the Subject Property.

Historical Hazardous Substance Storage Information Database (HHSS). The Historical Hazardous Substance Storage (HHSS) database contains information collected in the 1980s from facilities that stored hazardous substances. *Union Oil SS 07165* located on the Subject Property are listed on HHSS along with *Texaco* located at 2795 The Alameda, 0.07 miles northwest of the Subject Property. The listings by itself are not considered a REC to the Subject Property.

Statewide Environmental Evaluation and Planning System (UST SWEEPS). The Statewide Environmental Evaluation and Planning System (SWEEPS) is a historical listing of active and inactive underground storage tanks made available by the California State Water Resources Control Board. The Subject Property is listed on the database along with *Gasco Service Station* located at 2391 The Alameda, 0.18 miles from the Subject Property. The listings by itself are not considered a REC to the Subject Property.

Aboveground Storage Tanks (AST). A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). *500 El Camino Real* located 0.23 miles west northwest of the Subject Property is listed on the database. This is not considered a REC to the Subject Property.

Delisted Storage Tanks (DELISTED CTNK). Delisted Storage Tanks (DELISTED CTNK) database contains a list of storage tank sites that were removed by the SWRCB in California Environmental Protection Agency (CalEPA) and the Cal FIRE Office of State Fire Marshal. There are 28 listings on the database and none of them are a REC for the Subject Property based on distance and hydrogeologic settings.

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions (LUR). The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions. There is one listing on this database within the search radius. *Custom Food Machinery* located at 1180-1184 Campbell

Avenue is 0.43 miles east northeast of the Subject Property. A portion of the property has land use restrictions and this facility is also discussed previously as a listing in 'EnviroStor' Database.

Deed Restrictions and Land Use Restrictions (DEED). A list of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker are made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. There is one listing on the database for *BART System Silicon Valley Berryessa Extension Project* located 0.48 miles from the Subject Property. This is not considered a REC to the Subject Property.

Voluntary Cleanup Program (VCP). A list of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. There are 2 listings under this database, both *Custom Food Machinery* and *Blue's Roofing* are discussed earlier in the report. These listings are not a REC to the Subject Property.

Geotracker Cleanup Program Sites (CLEANUP SITES). A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). There are five facilities listed on this database. Based on distance from the Property, these listings are not a REC.

Historical Hazardous Substance Storage Container Information (HIST TANK). The SWRCB maintained the Hazardous Substance Storage Containers listing and inventory in the 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. There are five listings on this database including two on the Subject Property. The other listings include *Market Distributors* at 290 Bellomy Street, *Texaco* and *Gasco Service station*. These facilities are discussed in detail in multiple database listings earlier. This listing is not considered a REC for the Subject Property.

CALSITES Database (CALSITES). This historical database was maintained by the Department of Toxic Substance Control (DTSC) for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. The *Santa Clara Police Station* and the *Owens Illinois Glass Company* are listed on the database. These facilities are discussed in detail earlier under the EnviroStor database. They are not a REC to the Subject Property.

EnviroStor Inspection, Compliance, and Enforcement (INSP COMP ENF). A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor. There are two listings on the database and based on distance from the Property, they are not a REC.

Hazardous Waste Manifest Data (HAZNET). A list of hazardous waste manifests received each year by DTSC. The database identified ten listings within the search area including 3 listings on the Subject Property. Based on the nature of the listings, they are not considered a REC for the Subject Property.

Historical Hazardous Waste Manifest Data (HIST MANIFEST). A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992.

Both the Subject Property and the adjacent facility located at 700 Bellomy Street are listed on this database. Based on the nature of the listings, they are not considered a REC for the Subject Property.

California Environmental Reporting System (CERS) Hazardous Waste Sites (CERS HAZ). The list of sites in the CalEPA Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA Large Quantity Hazardous Waste Generator. The following facilities are listed as CERS Hazardous Waste Sites:

- *Pizza my Heart (Stuft Pizza)* at 700 Bellomy Street
- *Safeway* at 2605 The Alameda
- *Taco Bell* at 2555 The Alameda

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites (DELIST HAZ). This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. Two facilities are listed on the database.

4.3.3 County Database Information

Santa Clara County – Local Oversight Program Listing (LOP SANTA CLARA). The LOP SANTA CLARA database consists of a list of Underground Storage Tank (LUST) facilities in Santa Clara County. The facilities listed on this database are discussed earlier under the LUST database.

Santa Clara County – Historic Solvent Case Listing (HSOL SANTA CLARA). The HSOL SANTA CLARA database contains records for solvent and toxic release cases in Santa Clara County. There are two facilities listed on this database. *Santa Clara University* located at 500 El Camino Real is 0.23 miles from the Subject Property. *Summerhill Development* is located at 2655 Park Avenue and is 0.18 miles from the Subject Property and no further information is available on this listing. Based on the distance and the hydrogeologic setting, these listings are not considered a REC to the Subject Property.

4.3.4 Orphan Sites

Sites for which the records searched do not contain sufficient address or information to evaluate their locations relative to the search radius are considered “orphan sites.” The ERIS did not identify any Orphan Sites within the search area.

4.3.5 Other Records Reviewed

As documented for several listings, Tetra Tech reviewed additional environmental documents associated with the Subject Project and surrounding sites. Relevant documents reviewed are referenced below and available for review on the GeoTracker website under Case T0608501511 for the Subject Property and Case T0608501041 for the adjacent property located at 700 Bellomy Street.

Previous Phase I ESA

A previous Phase I ESA was conducted by PHR Environmental Consultants in May 1992 at the Subject Property (PHR 1992; Appendix D). The Phase I ESA report indicated that the Subject Property consisted of a gasoline service station and a mini-service maintenance shop with a three-bay metal and brick service station building. According to this report, UNOCAL purchased the property in December 1929 from Pacific Manufacturing Company for the purpose of constructing a service station. A survey tracing dated 1929 indicated a building located at the north corner of the Subject Property, however, no information was found regarding this building. This building was demolished and developed into a two-bay metal service station in 1930.

The multiple fuel leaks that occurred over time are also mentioned on the Phase I ESA report. The report mentions the following recommendations:

- The client may wish to continue with the ongoing environmental investigation.
- The client may wish to conduct soil sampling at the location of the previous waste oil UST.

Project Area Document Review

Previous work included removal and replacement of USTs in 1951 and in 1968, repair of a leaking pump coupling that resulted in an estimated release of 2,378 gallons of product in 1964, investigation of evidence of UST leakage in 1968, and repair of a product line leak in 1981 (Stantec 2012). The overall quantity of fuel released is unknown.

In 1988, during replacement of blending valves beneath the dispenser islands, soil impacted by petroleum hydrocarbons were observed, soil samples were collected, and 18 drums of impacted soil was excavated. In January 1991, four exploratory borings (U-A through U-D) were advanced.

In June 1991, four groundwater monitoring wells (U-1 through U-4) were installed. In February 1992, two on-site groundwater monitoring wells (U-5 and U-7) and three off-site groundwater monitoring wells (U-6, U-8, and U-9) were installed. In August 1992, seven on-site groundwater monitoring wells (U-10 through U-15 and U-18) and two off-site groundwater monitoring wells (U-16 and U-17) were installed.

In March 1993, the service station closed operations and all above- and below-ground facilities were removed. Two 10,000-gallon gasoline USTs; one 8,000-gallon diesel UST; a waste oil UST; product lines; the product dispenser islands; and the station building were removed. The final excavation also included removal of approximately 840 cubic yards of soil.

In the following years from May 1995 to December 1997 five extraction wells (U-4, U-12, U-13, U-15, and U-18) were utilized for groundwater extraction and treatment. In October 1995, a SVE system began operation at the Subject Property using four extraction wells (U-12, U-13, U-15, and U-18). Five additional SVE wells (UV-2, UV-3, UV-4, UV-5, and UV-6) were installed in November 1996 and connected to the SVE system in 1997. The SVE system was stopped in March 1998.

In 1996, Oxygen Release Compound was added to wells U-8, U-9, and U-17 in an attempt to enhance bioremediation. A biosparge remediation system operated at the Subject Property from September 1998 to August 2001 utilizing wells U-1 through U-4, U-10, U-11, U-14, U-15, and UV-1 through UV-6 (ENSR 2005).

A low-flow ozone sparge system operated at the Subject Property from February 2003 to October 2006 utilizing sparge points SP-1 through SP-4. The system reportedly supplied ozone at a concentration of approximately 125 parts per million (ppm) to groundwater at flow ranging from 3 to 6 cubic feet per minute. Stantec was unable to locate any additional information regarding the operation or shutdown of this system. Following ozone injection, free product was observed in well U-1 from March through December 2007. In 2004, ENSR performed a Resistivity and Induced Polarization (Res/IP) Survey to further identify and characterize the extent of soil contamination at the Subject Property.

In the following years, more borings were advanced to assess the extent of contamination and groundwater monitoring was conducted. In 2015, sulfate application to the subsurface was achieved through placement in or injection into 33 borings. A total of 24 borings were completed as permeable filled borings (PFBs) in proximity to target wells U-1, U-3, U-4, and U-18 to maximize effectiveness of sulfate to assist in bioremediation of benzene. Nine borings were advanced as high pressure injection (HPI) borings. A gypsum solution with a concentration of approximately 1,200 milligrams per liter (mg/L) was injected under high pressure in the HPI borings near wells U-12 and U-15 and in the areas between the target wells to remediate a larger area.

The Subject Property currently has a status of “Open-Remediation as of 9/28/2016” on the Geotracker database.

Surrounding Area Document Review

University Cleaners, a laundry/ dry cleaning facility is located at 2925 Park Avenue, adjacent to the Subject Property on the southwest. Tetra Tech contacted the business on March 28, 2022 and were informed that there are no on-site dry-cleaning operations at this location, and they conduct their dry-cleaning operations at an off-site facility. This facility is not listed on GeoTracker or other databases. This facility is not considered a REC to the Subject Property.

Stuft Pizza located at 700 Bellomy Street, adjacent to the Subject Property on the west is listed on the LUST database. A search on GeoTracker database shows information on UST removal and Site closure. A 2,500 gallon and a 750-gallon UST containing diesel/gasoline were discovered during excavation activities on the sidewalk of Park Avenue in 1994. They were found to be in demolished sections and the tanks were removed in January 1994. Soil samples were collected after the tank excavation at approximately 2 feet below the bottom of the tank as contamination was evident below the tank. Up to 350 ppm of TPHd was detected at 15-16 feet bgs. Excavation of the contaminated soil included a depth of 18 feet below the pavement surface. At this depth, due to apparent instability, the excavation was ceased by the Fire Department. A Phase II ESA conducted in 1999 at this facility indicates four soil borings around the former tank excavation site. The contamination appeared to be highest in boring B2, on Park Avenue between the Subject Property and the former tank excavation area on 700 Bellomy Street. The contamination from the Subject Property was indicated as a potential source of cross-contamination in the Phase II ESA conducted at 700 Bellomy Street. The tank was located close to the intersection of Bellomy Street and Park Avenue, adjacent to the west of the Property, across Park Avenue. The groundwater flow is to the north and northwest. The closure letter from Santa Clara Valley Water District for this facility indicates moderate levels of residual soil contamination exist in the vicinity of the former underground storage tank system beneath the

sidewalk on Park Avenue (adjacent to the Property). The last groundwater monitoring event at this site was conducted in 2002 and results pointed to natural attenuation of hydrocarbons in three monitoring wells installed. The results indicate TPHg values up to 2,630 ppb in MW2. The facility received a case closure status in 2002 and this listing is considered a HREC for the Subject Property based on the proximity and the presence of residual contamination.

5.0 SITE RECONNAISSANCE

A site reconnaissance was completed by Mike Ferrif of Tetra Tech on March 7, 2022. During the site reconnaissance, Mr. Ferrif was assisted onto the Subject Property by Asha Turman of Arcadis and met prospective purchasers of the Subject Property Anjuli Habbas and Kapil Nanda. Weather at the time of the site reconnaissance was sunny and clear with an ambient air temperature of approximately 62 degrees Fahrenheit.

5.1 GENERAL SITE SETTING AND OBSERVATIONS

The Subject Property is in Santa Clara, California, and encompasses approximately 0.46 acres (Figure 1). Additional details observed during the site reconnaissance are discussed below and documented in photographs presented in Appendix E.

5.2 SITE RECONNAISSANCE OBSERVATIONS

The objective of the site reconnaissance was to obtain information about the Subject Property and surrounding properties indicating the likelihood of RECs associated with the Subject Property. This includes describing the general Site setting and obtaining photographs of the Subject Property which document the site reconnaissance. The photographs taken during this site reconnaissance are included in Appendix E.

5.3 METHODOLOGY AND LIMITATIONS

The site reconnaissance consisted of a visual assessment of the Subject Property and a curbside review of adjacent properties and was conducted consistent with the methodology specified in ASTM *E1527-13 and E1527-21*. The purpose of the site reconnaissance was to evaluate the Subject Property for evidence of current or previous activities that may have resulted in adverse environmental impacts. The following subsections detail visual observations of the Subject Property and other potential sources of contamination identified during the site reconnaissance. All portions of the Subject Property were accessible to Tetra Tech personnel and no specific limitations to our inspection were noted. Subject Property features identified during the site reconnaissance are illustrated in Figure 3.

5.4 CURRENT PROPERTY USE

The Subject Property consists of approximately 0.46 acres of land that formerly hosted a gas station located at 2665 The Alameda in Santa Clara, Santa Clara County, California. The former gas station structures have been removed and the Subject Property is currently vacant and unimproved. The perimeter of the Subject Property is fenced with gates on the east and west sides. Twenty-four monitoring wells were observed within the fenced area of the Subject Property.

5.5 PAST PROPERTY USE

The Subject Property formerly hosted a gas station located at 2665 The Alameda in Santa Clara.

5.6 OBSERVATIONS

5.6.1 Interior and Exterior Observations

At the time of the site reconnaissance by Tetra Tech, the Subject Property did not host any structures.

5.6.2 Chemical Usage/Waste Storage

Tetra Tech did not observe any areas of the Subject Property that were utilized for chemical storage and/or hazardous waste storage.

5.6.3 Abandoned or Unidentified Containers

Tetra Tech did not observe abandoned and/or unidentified containers at the Subject Property. No staining or evidence of releases were observed regarding containers during the Site reconnaissance.

5.6.4 Catch Basins, Pits, Ponds, Lagoons and Drains

No catch basins, pits, ponds, lagoons, and/or drains were observed during the site reconnaissance.

5.6.5 Dry Wells

No evidence of dry wells was observed at the Site during the site reconnaissance.

5.6.6 Soil Staining

No evidence of soil staining was observed at the Site during the site reconnaissance.

5.6.7 Vegetative Stress

No evidence of vegetative stress outside normal California drought conditions was observed at the site during the Site reconnaissance.

5.6.8 Sheens

No surface water was present on the Subject Property during reconnaissance. No evidence of sheens was observed.

5.6.9 Soil Disturbance

No areas of recent soil disturbance were observed during the site reconnaissance. Based on the Subject Property history, underground storage tanks (USTs), associated piping, fuel pumps and gas station buildings were removed from the Subject Property. At the time of the site reconnaissance, grasses and weeds covered almost all of the Subject Property with small patches of asphalt visible beneath the soil in the southeast portion of the Subject Property.

5.6.10 Odors

No noticeable odors were detected during the site reconnaissance however when monitoring wells U-12, U-14 and U-18 were opened to confirm they were accessible, a petroleum odor was observed coming from those wells.

5.6.11 Underground Storage Tanks

The Subject Property is known to have formerly hosted a gas station with USTs. The USTs have been removed and 24 monitoring wells remain onsite. No evidence of current or abandoned USTs or associated piping was observed on the Subject Property.

5.6.12 Aboveground Storage Tanks

No evidence of the presence of existing or previous ASTs was observed on the Subject Property during the site reconnaissance.

5.6.13 Oil and Gas Wells/Activities

No evidence of the presence of existing or previous oil and gas wells or pipelines was observed on the Subject Property during the site reconnaissance.

5.6.14 Polychlorinated Biphenyl-Containing Materials

No PCB-containing materials were observed during the site reconnaissance.

5.6.15 Monitoring Wells and Soil Borings

Twenty-four monitoring wells were observed onsite during the site reconnaissance (Appendix E). An additional six monitoring wells were observed off-site, primarily to the west and north. Several of the monitoring wells were opened to check condition and one onsite well (UV-4) was found to have been filled with flaked bentonite (or a similar substance). A petroleum odor was observed from wells U-12, U-14 and U-18 when opened.

5.6.16 Spills/Releases

As discussed above, several monitoring wells were observed at the Property, particularly in the northern portion, indicating a release of some kind had occurred. No other evidence of spills or releases were observed during the site reconnaissance.

5.6.17 Surface Debris

A small amount of litter was observed at the Property, primarily along the fence lines. No other surface debris was observed during the site reconnaissance.

5.6.18 Hydraulic Equipment

No hydraulic equipment was observed during the site reconnaissance.

5.6.19 Air Compressor Usage

No air compressor equipment was observed during the site reconnaissance.

5.6.20 Asbestos-Containing Materials

The Subject Property did not host any structures at the time of the site reconnaissance. No suspect asbestos-containing materials were observed.

5.6.21 Lead-Based Paint and Other Lead-Containing Materials

The Subject Property did not host any structures at the time of the site reconnaissance. No suspect lead-based paint or other lead-containing materials were observed.

5.6.22 Lead in Drinking Water

No drinking water is supplied to the Subject Property. Any drinking water supplied to the Subject Property is expected to comply with state standards, such that lead is unlikely to be present at elevated levels. No information was provided or obtained suggesting elevated lead levels in drinking water at or near the Subject Property.

5.6.23 Microbial Growth and Moisture Intrusion

The Subject Property did not host any structures at the time of the site reconnaissance therefore microbial growth and moisture intrusion are not a concern.

5.6.24 Waste Disposal

Tetra Tech did not observe evidence of waste disposal at the Subject Property during the site reconnaissance.

5.6.25 Wastewater Discharges

No wastewater discharges were observed on the Subject Property during the site reconnaissance.

5.6.26 Storm Water Discharges

No stormwater drains or grates were observed on the Subject Property during the site reconnaissance however stormwater drains were present in the roadways adjacent to the Subject Property.

5.6.27 Utilities

No utilities are currently provided to the Subject Property.

5.7 CURRENT USE OF ADJOINING PROPERTIES

The Subject Property is surrounded by on three sides by roadways with a large parking lot to the south. The surrounding properties are a mixture of commercial and residential. Santa Clara University housing and other buildings are located across The Alameda, north and east of the Subject Property and a large grocery store and parking lot occupy the area south of the Subject Property. A mixture of commercial and residential properties are adjacent to the southwest and west of the Subject Property including a drycleaners (University Cleaners) southeast of the Subject Property. The adjacent property northwest of the Property across Park Avenue is a daycare (Kids on Campus).

5.8 PAST USE OF ADJOINING PROPERTIES

Past uses of the adjoining properties are discussed in Section 5.8.

5.8.1 Adjacent Property and Vicinity Findings

Adjacent properties of note include various residence halls of Santa Clara University located to the east and northeast of the Property; Kids on Campus preschool to the northwest; a dry-cleaning facility

to the southwest and various commercial establishments to the northwest, west and south of the Subject Property.

6.0 INTERVIEWS

6.1 USER QUESTIONNAIRE

The ASTM Standard *E1527-13 and E1527-21* requires that the users of an ESA provide certain information for incorporation into the ESA report. Therefore, in order to meet the All Appropriate Inquiry rule, Chevron were asked to provide responses to questions presented in the User Questionnaire (Appendix B). The User verified the purchase price (or lease price) for the Subject Property reflects the fair market value. The completed Landowner Questionnaire was not received by Tetra Tech.

6.2 AGENCY RECORDS

The following agencies and government databases were contacted for information related to environmental issues associated with the Site and surrounding properties:

- City of Santa Clara
- Santa Clara Valley Water District
- Santa Clara Fire Department
- Bay Area Air Quality Management District
- Department of Toxic Substances Control (DTSC)

Regulatory correspondence documents are provided as Appendix B.

City of Santa Clara

On February 25, 2022, Tetra Tech filled out a records request form online and reached out to the City of Santa Clara in an effort to obtain any records that include groundwater or soil sampling reports/analytical results, reports of spills of petroleum or hazardous chemicals (both closed and open), ASTs and USTs closure reports/certificates, inspection reports, wastewater permits, air permits, building permits, and reports of chemical odors or fumes. The agency responded on March 7, 2022 with site inspection records and soil reports. The agency responded again on April 4, 2022 with further documentation related to the site and surrounding properties including geotechnical investigation reports. The documents are provided in Appendix B.

Santa Clara Valley Water District

On February 28, 2022, Tetra Tech reached out to the Santa Clara Valley Water District in an effort to obtain any records that include groundwater or soil sampling reports/analytical results, reports of spills of petroleum or hazardous chemicals (both closed and open), ASTs and USTs closure reports/certificates, inspection reports, wastewater permits, air permits, building permits, and reports of chemical odors or fumes. The agency responded on March 8, 2022, indicating that they possess some well permits pertaining to the Subject Property and provided a link to their well information GIS tool. However, no documents were provided. Tetra Tech considers it unlikely that any further records from this agency would alter the conclusions or recommendations of this report.

Santa Clara Fire Department

On March 25, 2022, Tetra Tech reached out to the Santa Clara Fire Department for any records that include groundwater or soil sampling reports/analytical results, reports of spills of petroleum or hazardous chemicals (both closed and open), ASTs and USTs closure reports/certificates, inspection reports, wastewater permits, air permits, building permits, and reports of chemical odors or fumes. The agency responded the same day by directing the request to the City of Santa Clara. At the time of this report, the agency did not respond with records related to the Subject Property or the surrounding sites. Tetra Tech believes that further records from this agency would be unlikely to alter the recommendations or conclusions of this report, and the lack of information does not represent a significant data gap.

Bay Area Air Quality Management District

On February 28, 2022, Tetra Tech reached out to the Bay Area Air Quality Management District in an effort to obtain any records that include groundwater or soil sampling reports/analytical results, reports of spills of petroleum or hazardous chemicals (both closed and open), ASTs and USTs closure reports/certificates, inspection reports, wastewater permits, air permits, building permits, and reports of chemical odors or fumes. The District responded on February 28, 2022 indicating no records were found for the Subject Property. However, at the time of this report, the agency did not respond to records request for the surrounding properties. Tetra Tech considers it unlikely that any further records from this agency would alter the conclusions or recommendations of this report and concludes that the lack of this information does not represent a significant data gap.

Department of Toxic Substances Control

On March 3, 2022, Tetra Tech reached out to DTSC for any records that include groundwater or soil sampling reports/analytical results, reports of spills of petroleum or hazardous chemicals (both closed and open), ASTs and USTs closure reports/certificates, inspection reports, wastewater permits, air permits, building permits, and reports of chemical odors or fumes. The agency mailed a response with facility records for one of the sites located near the Subject Property. A scanned copy of the document is included in Appendix B.

7.0 CONCLUSIONS AND RECOMMENDATIONS

Tetra Tech performed a Phase I Environmental Site Assessment (ESA) for Kapital Partners, LLC at 2665 The Alameda, Santa Clara, California (Property). This Phase I ESA was completed for the potential purchase and development of the Subject Property as student housing. This Phase I ESA was completed in general accordance with American Society for Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, E1527-13 and E1527-21* and All Appropriate Inquiries Final Rule 40 Code of Federal Regulations Part 312. The objective of this Phase I ESA was to identify RECs, HRECs, and CRECs that affect the Subject Property.

To assess environmental conditions at the Property, Tetra Tech reviewed site land use history, geology, hydrogeology, and environmental records for the Subject Property and its general vicinity; conducted a visual site reconnaissance; and reviewed the completed User Questionnaire.

The Subject Property is located at 2665 The Alameda and consists of a triangular parcel of land in the city of Santa Clara and is identified by the APN: 230-12-012. The Subject Property is bordered by the Alameda to the northeast, Park Avenue to the west, Bellomy street to the northwest, and a parking lot to the south. The Subject Property is currently undeveloped and vacant except for some monitoring wells. The Subject Property is fenced on all sides and access is on Park Avenue street.

Based on the site reconnaissance performed on March 7, 2022, the ERIS regulatory database review, city directory search, historical aerial and topographic map review, and the completed User Questionnaire, review of the California Geotracker database, and review of other documents made available, the following were identified:

ASTM defines a REC as:

(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

The RECs identified during the completion of this Phase I ESA are as follows:

The Subject Property is an active Leaking Underground Storage Tank (LUST) cleanup site under the San Francisco Bay Regional Water Quality Control Board (RWQCB). A former UNOCAL branded service station operated on the Subject Property from approximately 1930 to 1993. Site features included a station building, three product dispenser islands, four USTs, one waste oil UST, and a clarifier. In March 1993, the service station ceased operations and all above- and below-ground facilities were removed. Site assessments performed at the Subject Property since 1988 revealed petroleum hydrocarbon impacts to soil, soil vapor, and groundwater. A groundwater monitoring well network consisting of groundwater monitoring wells installed at and to the north of the Subject Property has been gauged and sampled generally on a quarterly basis since 1991. The groundwater flow direction beneath the Subject Property is predominantly to the north-northwest with a high variability in

groundwater elevations since groundwater monitoring began. Remediation activities at the Subject Property have included the use of absorbent socks, soil excavation, soil vapor extraction, groundwater extraction and treatment, injection of oxygen release compound to enhance bioremediation, biosparging, ozone sparging, and sulfate applications. A request for closure was made in May 2020 under the Low-Threat Underground Storage Tank Case Closure Policy; however, the RWQCB has not granted closure for the Subject Property. The results of the latest groundwater monitoring event conducted in March 2022 indicates significant petroleum impacts remain on the Subject Property and have migrated offsite to the northwest. The presence of petroleum products at the Subject Property due to a release and the lack of regulatory closure is considered a REC.

ASTM defines an HREC as:

A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.

The HREC identified during the completion of this Phase I ESA is as follows:

A former gasoline service station located at 700 Bellomy Street (currently Pizza My Heart) is immediately west of the Subject Property across Park Avenue. A 2,500-gallon and a 750-gallon UST containing diesel/gasoline were discovered during excavation activities within the sidewalk of Park Avenue in 1994. Elevated concentrations of petroleum hydrocarbons were detected in soil samples collected from beneath the USTs and in groundwater. Three groundwater monitoring wells were installed at the northern portion of the property and within Park Avenue. The last groundwater monitoring event at this property was conducted in April 2002. Total Petroleum Hydrocarbons as gasoline (TPHg) was detected in groundwater samples at concentrations up to 2,630 micrograms per liter ($\mu\text{g/L}$) and benzene was detected in groundwater samples at concentrations up to 15.7 $\mu\text{g/L}$. The facility received a case closure letter from the Santa Clara Valley Water District on June 26, 2002 with the advisory that moderate levels of residual soil contamination exist in the vicinity of the former tank system beneath the sidewalk along Park Avenue. The release from the UST is considered a HREC as the petroleum impacts associated with the release from the property may have affected the Subject Property; however, the impacts have been addressed to the satisfaction of the regulatory authority.

ASTM defines a CREC as:

A recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

No CRECs were identified during the completion of this Phase I ESA.

8.0 LIMITATIONS

This report was compiled based partially on information supplied to Tetra Tech from outside sources and other information in the public domain. The conclusions and opinions herein are based on the information Tetra Tech obtained in compiling the report. This information is on file at Tetra Tech's office in Irvine, California. Tetra Tech makes no warranty as to the accuracy of statements made by others that may be contained in the report; nor are any other warranties or guarantees, expressed or implied, included or intended by the report except that it has been prepared in accordance with the current generally accepted practices and standards consistent with the level of care and skill exercised under similar circumstances by other professional consultants or firms performing the same or similar services. Because the facts forming the basis for the report are subject to professional interpretation and differing conclusions could be reached. Tetra Tech does not assume responsibility for discovery and elimination of hazards that could cause accidents, injuries, or damage. Compliance with submitted recommendations or suggestions does not assure elimination of hazards or fulfillment of client's obligations under local, state, or federal laws, or any modifications or changes to such laws. None of the work performed hereunder shall constitute or be represented as a legal opinion of any kind or nature but shall be a representation of findings of fact from site reconnaissance and records examined.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 Code of Federal Regulations Part 312.10.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed the All Appropriate Inquiries in conformation with the standards and practices set forth in 40 Code of Federal Regulations Part 312. The resume of Tetra Tech personnel preparing the Phase I ESA is provided in Appendix F.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Executive Summary

Property Information:

Project Property: *Kapital Partners, LLC - 2655 The Alameda, Santa Clara, CA

RB Case No:	21-036	Potential COC:	Gasoline
Local Case No:	07S1W02Q02f	How Discovered:	UST System Modification
Begin Date:	6/10/1988	Stop Method:	Repair Product Piping
Lead Agency:	SANTA CLARA COUNTY LOP	Stop Description:	
Local Agency:	SANTA CLARA COUNTY LOP	Case Worker:	GOR
CUF Case:	YES	File Location:	All Files are on GeoTracker or in the Local Agency Database

Potential Media of Concern: Other Groundwater (uses other than drinking water)
How Discovered Description:
Calwater Watershed Name: Santa Clara - Palo Alto (205.50)
DWR GW Subbasin Name: Santa Clara Valley - Santa Clara (2-009.02)
Disadvantaged Community:
Calenviroscreen Score: 56-60%
Site History:

1988 – In May, a leak was found during piping modification work. It is stated that the leak appeared to be old. A soil sample was collected and reported to contain 48 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 1,400 ppm TPH as Diesel (TPHd), and 0.3 ppm Toluene. A report of this sampling was not found in the file. 1991 – In June, 4 groundwater monitoring wells (U1 through U4) were installed to depths of 60-65 feet below the ground surface (ft bgs). 17 soil samples were collected and reported to contain maximum concentrations of 4,400 ppm TPHg, 4.1 ppm TPHd, 21 ppm Benzene, 95 ppm Toluene, 40 ppm Ethylbenzene, and 160 ppm Xylenes. Periodic sampling of the monitoring wells began at this time. At this time, the report stated that this gas station has been in operation for approximately 45 years. 1992 – In February, 5 monitoring wells (U5 through U9) were installed to 40 ft bgs on and offsite. 17 soil samples were collected and reported to have low to non-detectable concentrations of the Constituents of Concern (COCs). The new wells were incorporated into the monitoring program. In February, well U1 was reported to have measurable Free Product (FP) on the groundwater. In August, 19 groundwater wells (U10 through U18) and 1 soil vapor extraction well (UV1) were installed to maximum depths of 40 ft bgs. The soil vapor well was completed to 30 ft bgs. 48 soil samples were collected and reported to contain maximum concentrations of 5,400 ppm TPHg, 71 ppm Benzene, 280 ppm Toluene, 77 ppm Ethylbenzene, and 400 ppm Xylenes for samples collected from well U13 located near the USTs and along the piping. In October, a soil vapor extraction (SVE) test was conducted onsite. Additionally, an air sparge test was also conducted at this time. 1993 – In May, 4 underground storage tanks (USTs) and associated piping and dispensers were removed from the site. The service station was demolished following UST removal. During station demolition, another unknown 100-gallon UST was found near the station building and removed. Also removed was a concrete oil/water separator. 6 soil samples were collected from the fuel UST excavation from depths of 14-14.5 ft bgs. These samples were reported to have maximum concentrations of 1,800 ppm TPHg, 5.9 ppm Benzene, 2.1 ppm Toluene, 3.3 ppm Ethylbenzene, 2.5 ppm Xylenes and 95 ppm TPH as Oil (TPHo). 10 soil samples were collected along the piping from 3-6.5 ft bgs. And were reported to contain maximum concentrations of 5,300 ppm TPHg, 0.27 ppm Benzene, 39 ppm Toluene, 78 ppm Ethylbenzene, 710 ppm Xylenes and 57 ppm TPHo. 1 soil sample was collected from 8.5 ft bgs beneath the waste oil UST and reported to contain 15 ppm TPHg, 19 ppm Toluene, 0.08 ppm Xylenes, 5 ppm TPHo, 120 ppm Total Oil and Grease (TOG), 59 ppm Acetone, and 6 ppm Tetrachloroethene (PCE). 1 soil sample was collected from 6 ft bgs beneath the oil/water

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

separator and was not reported to have concentrations of the COCs present above the laboratory reporting limits. 1 soil sample was collected from 5 ft bgs beneath the unknown UST and reported to contain 260 ppm TPHg, 0.35 ppm Toluene, 1.8 ppm Ethylbenzene, 480 ppm Xylenes, 7,200 ppm TPHo, 15,000 TOG, 380 ppm Acetone, and 520 ppm Naphthalene. Soil was excavated and 2 additional samples were collected from 10.5 ft bgs. These deeper samples were reported to have maximum concentrations of 46 ppm TPHg, 0.43 ppm Benzene, 0.42 ppm Toluene, 0.27 ppm Ethylbenzene, 1.5 ppm Xylenes, 1,100 ppm TPHo, and 1,000 ppm TOG. The analysis of the deeper samples did not include Volatile Organic Compounds (VOCs). Approximately 532 cubic yards of soil were removed from the site in association with the UST removals. Prior to backfilling the fuel UST excavation, perforated horizontal PVC piping was placed within the excavation with vertical risers exposed at the ground surface. In December, wells U12, U13, U14 and U18 were reported to have FP present on the groundwater. 1995 – In June, groundwater extraction operations began at the site and continued through December 1997. It is estimated that 924,481 gallons of groundwater were treated and 227 pounds of TPH and 46 pounds of Benzene were removed. In October, a SVE system began operations at the site and continued through March 1998. It is estimated that the SVE removed 762 pounds of TPH and 6.1 pounds of Benzene. 1996 – It is noted during the June groundwater sampling event that ORC socks were in wells U8, U9 and U17. The socks were mentioned in the groundwater monitoring reports until the December 1997 sampling event where there was no mention of socks. In November, 5 shallow soil vapor extraction wells (UV2 through UV6) were installed due to rising groundwater across the site. 15 soil samples were collected and reported to have maximum concentrations of 860 ppm TPHg, 4.8 ppm Benzene, 2.1 ppm Toluene, 2 ppm Ethylbenzene, 8.1 ppm Xylenes, and 150 ppm TPH as Diesel (TPHd). 1998 – In September, air sparging was started onsite through August 2001. 2001 – A Corrective Action Plan (CAP) was prepared. In the CAP it is stated that groundwater across the site has risen approximately 13 feet over the last 7 years. It also states that there is a groundwater ridge running east-west across the site. The CAP recommended the use of air sparge with SVE to remediate the site. A subsequent review of the CAP by another consultant recommended ozone sparge to remediate the site. 2002 – In November, 4 ozone sparge wells (SP1 through SP4) were installed to depths of 42-62 ft bgs. Well U19 was installed near well U1 and screened from 57-62 ft bgs. This well was installed to assess whether well U1 was acting as a conduit for FP movement up the soil column. Soils encountered in U19 were a continuous sequence of clays, which was not consistent with the interbedded soils encountered in previous investigations. The lack of FP and similar dissolved hydrocarbon concentrations in well U19 suggests that the accumulation of FP in well U1 is not due to high dissolved hydrocarbon concentrations in the lower plume. 6 soil samples were collected from U19 and the reporting limit for most sample was raised significantly. The maximum detections reported were 850,000 ppm TPHg, 20,000 ppm Ethylbenzene, 53,000 ppm Xylenes, and 0.054 ppm Methyl tert-Butyl Ether (MtBE). 2003 – In February, an ozone injection system was started onsite and operated through October 2006. 2004 – In May, a resistivity and induced polarization survey was completed at the site. The survey was conducted to see if this method could identify areas of contamination. 2008 – In October, wells U2 and U5 were destroyed due to a long history of low or non-detectable concentrations of COCs. Well UV4 was destroyed due to an obstruction. And wells U6, U9 and U16 were destroyed due to their location in the public right-of-way.

Site History:			

1988 – In May, a leak was found during piping modification work. It is stated that the leak appeared to be old. A soil sample was collected and reported to contain 48 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 1,400 ppm TPH as Diesel (TPHd), and 0.3 ppm Toluene. A report of this sampling was not found in the file.

<i>Map Key</i>	<i>Number of Records</i>	<i>Direction</i>	<i>Distance (mi/ft)</i>	<i>Elev/Diff (ft)</i>	<i>Site</i>	<i>DB</i>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

1991 – In June, 4 groundwater monitoring wells (U1 through U4) were installed to depths of 60-65 feet below the ground surface (ft bgs). 17 soil samples were collected and reported to contain maximum concentrations of 4,400 ppm TPHg, 4.1 ppm TPHd, 21 ppm Benzene, 95 ppm Toluene, 40 ppm Ethylbenzene, and 160 ppm Xylenes. Periodic sampling of the monitoring wells began at this time.

At this time, the report stated that this gas station has been in operation for approximately 45 years.

1992 – In February, 5 monitoring wells (U5 through U9) were installed to 40 ft bgs on and offsite. 17 soil samples were collected and reported to have low to non-detectable concentrations of the Constituents of Concern (COCs). The new wells were incorporated into the monitoring program.

In February, well U1 was reported to have measurable Free Product (FP) on the groundwater.

In August, 19 groundwater wells (U10 through U18) and 1 soil vapor extraction well (UV1) were installed to maximum depths of 40 ft bgs. The soil vapor well was completed to 30 ft bgs. 48 soil samples were collected and reported to contain maximum concentrations of 5,400 ppm TPHg, 71 ppm Benzene, 280 ppm Toluene, 77 ppm Ethylbenzene, and 400 ppm Xylenes for samples collected from well U13 located near the USTs and along the piping.

In October, a soil vapor extraction (SVE) test was conducted onsite. Additionally, an air sparge test was also conducted at this time.

1993 – In May, 4 underground storage tanks (USTs) and associated piping and dispensers were removed from the site. The service station was demolished following UST removal. During station demolition, another unknown 100-gallon UST was found near the station building and removed. Also removed was a concrete oil/water separator.

6 soil samples were collected from the fuel UST excavation from depths of 14-14.5 ft bgs. These samples were reported to have maximum concentrations of 1,800 ppm TPHg, 5.9 ppm Benzene, 2.1 ppm Toluene, 3.3 ppm Ethylbenzene, 2.5 ppm Xylenes and 95 ppm TPH as Oil (TPHo).

10 soil samples were collected along the piping from 3-6.5 ft bgs. And were reported to contain maximum concentrations of 5,300 ppm TPHg, 0.27 ppm Benzene, 39 ppm Toluene, 78 ppm Ethylbenzene, 710 ppm Xylenes and 57 ppm TPHo.

1 soil sample was collected from 8.5 ft bgs beneath the waste oil UST and reported to contain 15 ppm TPHg, 19 ppm Toluene, 0.08 ppm Xylenes, 5 ppm TPHo, 120 ppm Total Oil and Grease (TOG), 59 ppm Acetone, and 6 ppm Tetrachloroethene (PCE).

1 soil sample was collected from 6 ft bgs beneath the oil/water separator and was not reported to have concentrations of the COCs present above the laboratory reporting limits.

1 soil sample was collected from 5 ft bgs beneath the unknown UST and reported to contain 260 ppm TPHg, 0.35 ppm Toluene, 1.8 ppm Ethylbenzene, 480 ppm Xylenes, 7,200 ppm TPHo, 15,000 TOG, 380 ppm Acetone, and 520 ppm Naphthalene. Soil was excavated and 2 additional samples were collected from 10.5 ft bgs. These deeper samples were reported to have maximum concentrations of 46 ppm TPHg, 0.43 ppm Benzene, 0.42 ppm Toluene, 0.27 ppm Ethylbenzene, 1.5 ppm Xylenes, 1,100 ppm TPHo, and 1,000 ppm TOG. The analysis of the deeper samples did not include Volatile Organic Compounds (VOCs).

Approximately 532 cubic yards of soil were removed from the site in association with the UST removals. Prior to backfilling the fuel UST excavation, perforated horizontal PVC piping was placed within the excavation with vertical risers exposed at the ground surface.

In December, wells U12, U13, U14 and U18 were reported to have FP present on the groundwater.

1995 – In June, groundwater extraction operations began at the site and continued through December 1997. It is estimated that 924,481 gallons of groundwater were treated and 227 pounds of TPH and 46 pounds of Benzene were removed.

In October, a SVE system began operations at the site and continued through March 1998. It is estimated that the SVE removed 762 pounds of TPH and 6.1 pounds of Benzene.

1996 – It is noted during the June groundwater sampling event that ORC socks were in wells U8, U9 and U17. The socks were mentioned in the groundwater monitoring reports until the December 1997 sampling event where there was no mention of socks.

In November, 5 shallow soil vapor extraction wells (UV2 through UV6) were installed due to rising groundwater across the site. 15 soil samples were collected and reported to have maximum concentrations of 860 ppm TPHg, 4.8 ppm Benzene, 2.1 ppm Toluene, 2 ppm Ethylbenzene, 8.1 ppm Xylenes, and 150 ppm TPH as Diesel (TPHd).

1998 – In September, air sparging was started onsite through August 2001.

2001 – A Corrective Action Plan (CAP) was prepared. In the CAP it is stated that groundwater across the site has risen approximately 13 feet over the last 7 years. It also states that there is a groundwater ridge running east-west across the site. The CAP recommended the use of air sparge with SVE to remediate the site. A subsequent review of the CAP by another consultant recommended ozone sparge to remediate the site.

2002 – In November, 4 ozone sparge wells (SP1 through SP4) were installed to depths of 42-62 ft bgs. Well U19 was installed near well U1 and screened from 57-62 ft bgs. This well was installed to assess whether well U1 was acting as a conduit for FP movement up the soil column. Soils encountered in U19 were a continuous sequence of clays, which was not consistent with the interbedded soils encountered in previous investigations. The lack of FP and similar dissolved hydrocarbon concentrations in well U19 suggests that the accumulation of FP in well U1 is not due to high dissolved hydrocarbon concentrations in the lower plume. 6 soil samples were collected from U19 and the reporting limit for most sample was raised significantly. The maximum detections reported were 850,000 ppm TPHg, 20,000 ppm Ethylbenzene, 53,000 ppm Xylenes, and 0.054 ppm Methyl tert-Butyl Ether (MtBE).

2003 – In February, an ozone injection system was started onsite and operated through October 2006.

2004 – In May, a resistivity and induced polarization survey was completed at the site. The survey was conducted to see if this method could identify areas of contamination.

2008 – In October, wells U2 and U5 were destroyed due to a long history of low or non-detectable concentrations of COCs. Well UV4 was destroyed due to an obstruction. And wells U6, U9 and U16 were destroyed due to their location in the public right-of-way.

Regulated Programs

EI ID: 10661491 **EI Description:** Chemical Storage Facilities

Violations

Violation Date: 01/02/2019 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** Santa Clara City Fire Department
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 07/30/2020. Liquid carbon dioxide is reported in pounds rather than gallons on the Hazardous Materials Inventory. Amend submittal to report the quantity of liquid carbon dioxide in gallons.

Violation Description:

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 01/02/2019
Violation Program: HMRRP
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Notes:

Violation Source: CERS
Violation Division: Santa Clara City Fire Department

Returned to compliance on 07/30/2020. Employee HMBP training documentation was not available for review during inspection. Provide copies of employee training documentation to SCFD for review.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date: 01/02/2019
Violation Program: HMRRP
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Violation Source: CERS
Violation Division: Santa Clara City Fire Department

Returned to compliance on 07/30/2020. DISREGARD THE CORRECTIVE ACTION NOTES ABOVE AND BELOW THIS VIOLATION AND ADDRESS THE FOLLOWING DEFICIENCY: The facility was notified of deficiencies in the Hazardous Materials Business Plan (HMBP) submittal via the California Environmental Reporting System (CERS) on 5/3/2018, but did not correct any of the identified deficiencies and re-submit. Upon being notified of deficiencies in an HMBP, the facility shall electronically submit a corrected HMBP within 30 days from the date of the notice. Immediately correct all deficiencies identified in CERS and in this inspection report and re-submit [HSC 25508(a)(2)].

Violation Description:

Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 10/16/2014
Violation Program: HMRRP
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Notes:

Violation Source: CERS
Violation Division: Santa Clara City Fire Department

Returned to compliance on 03/04/2016.

Violation Description:

Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 01/02/2019
Violation Program: HMRRP
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Violation Source: CERS
Violation Division: Santa Clara City Fire Department

Returned to compliance on 07/30/2020. The Unified Program Agency/CUPA phone number is incorrect in the Emergency Response and Training Plan phone number list. Amend to identify Santa Clara Fire Department as the CUPA and amend Plan to include SCFD's phone number, (408)615-4970.

Violation Description:

Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.

Violations

Violation Date: 01/02/2019 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** Santa Clara City Fire Department
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 07/30/2020. The Business Owner/Operator Identification page does not have an environmental contact associated with the facility listed.

Violation Description:

Failure to complete and electronically submit the Business Activities Page and/or Business Owner Operator Identification Page.

Violations

Violation Date: 01/02/2019 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** Santa Clara City Fire Department
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 07/30/2020. The HMBP site map does not have a north orientation, evacuation staging area, location of emergency response equipment (e.g. fire extinguishers, pull stations, alarms, etc), and all emergency shut-offs (e.g. water, CO2).

Violation Description:

Failure to complete and electronically submit a site map with all required content.
