

An aerial photograph of an industrial area. A large rectangular area in the center is outlined with a dashed line and labeled 'AIR TREATMENT FACILITY'. Within this area, there are several large circular tanks and other industrial structures. To the right of the 'AIR TREATMENT FACILITY', a smaller rectangular area is highlighted with a solid blue border and labeled 'PROJECT SITE'. The area is bounded by 'RUGGIA AVENUE' to the north and 'ROCKAW AVENUE' to the south. The surrounding area contains various other industrial buildings and parking lots.

Project Application

SmartFuel H70/H35 commercial hydrogen dispenser is designed for use in a variety of applications, including:

- Fueling stations for commercial vehicles
- Fueling stations for residential use
- Fueling stations for industrial use
- Fueling stations for marine use
- Fueling stations for aviation use
- Fueling stations for space use

Foot-candle (Foot-candle) is a unit of illuminance, or light intensity. It is defined as the amount of light that falls on a surface of one square foot from a source of one candle power at a distance of one foot. It is a measure of the brightness of a surface.

4 Depth of Pouring is less than 1" the designator is optimized with a smaller surface area. (depth)
5 Depth of Pouring is greater than 1" a larger surface area will be required (depth)
6 Depth of Pouring is between 1" to 12" in the same designator for intermediate flow through situation
