

Chapter 13.1

Introduction

Background and Purpose

The City of Santa Clara continues to be a desirable place to live and in recent years the City has adopted new policies and provided funding to achieve more affordable housing opportunities in the community, as well as preparing long range plans to add new high-density, amenity rich neighborhoods that provide a variety of affordability options.

The historic agricultural nature of Santa Clara was forever changed with the invention of the semiconductor chip in the 1950's. Since then, the growth of the technology industry has fueled job growth and propelled Santa Clara to the current population of about 127,000 residents.¹ Santa Clara's population is expected to grow by about 26 percent to 159,500 by 2040. The composition of the housing stock in Santa Clara has shifted, with more multi-family units being built than single family homes. This trend likely reflects the limited availability of land for development, the high cost of homeownership, and the growing number of young adults moving to this job rich area.

Demand for home ownership continues to exceed the supply and prices are increasingly out of reach even for moderate income households. As of 2019, 43 percent of homes were owner households and 57 percent were renter households, reflective of the high cost of home ownership in the area. Housing supply in general is tight with the vacancy rate of renter occupied homes only at 4.8 percent and owner homes at less than one percent.

The City's motto, the "Center of What's Possible", conveys the City's can-do commitment to addressing housing challenges and ensuring a high quality of life for current and future residents. In response to the daunting local and regional housing supply challenges, the City has been active in increasing housing access and choice, and removing barriers to development, as well as streamlining the development process to facilitate housing development. Additionally, the City is nearing completion of a comprehensive Zoning Code update which will further streamline processes with the inclusion of objective standards and new zoning districts that better align with the City's General Plan. In 2018, the City began implementing an affordable housing ordinance with inclusionary requirements for new housing development. The ordinance also includes a commercial linkage fee so that office, R&D, and data centers contribute fees to support affordable

¹ Census.gov

SANTA CLARA HOUSING ELEMENT

housing development. Since the fall of 2021, the linkage fee has generated over \$5.6 million, and those funds will be used to address affordable housing needs in the City.

The City has also partnered with affordable housing developers providing gap financing and is working expeditiously to facilitate entitlements and building permits for construction, meeting tight financing deadlines and requirements. Infill areas of the City such as El Camino Real, Stevens Creek Boulevard, Winchester Boulevard, and Homestead Road with strong access to transit, retail, schools, and services are the sites of several new affordable, supportive, and transitional housing projects under construction which have benefited from new State laws that streamline processes and, in many cases, have also been financially supported by the City. New neighborhoods in the long-range planning areas of Lawrence Station, Tasman East, Patrick Henry Drive, Freedom Circle, and Downtown will have access to high quality transit, parks, community center(s), schools, and entertainment.

Through this updated Housing Element, the City puts forth strengthened housing goals, policies and actions that will support housing opportunities for new residents and existing residents facing displacement pressures so that Santa Clara can continue to be a vital and diverse city in the heart of the Silicon Valley.

Regulatory Framework

The Housing Element is one of the required components of a General Plan and must be consistent with all other elements of the General Plan. It identifies ways in which the housing needs of existing and future residents can be met. State law describes in great detail the necessary contents of the Housing Element: 1) identifying housing needs; 2) affirmatively furthering and assessing fair housing; 3) analyzing constraints to housing production; 4) examining past accomplishments from prior housing element planning efforts; 5) understanding how past planning practices may have excluded groups of people from housing opportunities; 6) documenting how the public has been engaged in the planning process; and 7) assessing and describing how land and financial resources will be marshalled to meet all housing needs. This Housing Element responds to those requirements and responds specifically to conditions and policy directives unique to Santa Clara.

The California Legislature has identified the attainment of a decent home and suitable living environment for every Californian as the State's main housing goal. Recognizing the important part that local planning programs play in pursuit of this goal, the Legislature has mandated that all cities and counties prepare a Housing Element as part of their comprehensive General Plans.

Section 65581 of the California Government Code reflects the legislative intent for mandating that each city and county prepare a Housing Element:

1. To ensure that counties and cities recognize their responsibilities in contributing to the attainment of the State housing goal.

2. To ensure that counties and cities will prepare and implement Housing Elements which, along with federal and State programs, will move toward attainment of the State housing goal.
3. To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the State housing goal, provided such a determination is compatible with the State housing goal and regional housing needs.
4. To ensure that each local government cooperates with other local governments to address regional housing needs.

Scope and Content of the Housing Element

The 2023-2031 City of Santa Clara Housing Element has been prepared to meet the intent and requirements of State law and is intended to be integrated into the City's 2010-2035 General Plan. The Housing Element covers the planning period that begins January 31, 2023, and ends January 31, 2031, focusing on ways to promote residential infill development, given land supply and cost constraints. The intent of this Element is to plan for an adequate variety of safe, appropriate, and well-built housing for all residents of Santa Clara.

To comply with State Housing Element Law the he Housing Element consists of:

- An overview of the housing element and its relation to other elements in the General Plan
- A review and assessment of the 2015-2023 Housing Element
- A summary of the housing needs assessment
- An assessment of Fair Housing
- An analysis of special housing needs
- A review of constraints to housing development
- An analysis of at-risk housing
- A sites analysis of land parcels suitable for housing
- Goals, policies, and actions that support the Housing Element

Acronyms

This element includes use of many acronyms to identify agencies, housing programs, funding sources, and planning terms. Commonly used acronyms are:

ABAG/MTC – Association of Bay Area Governments/Metropolitan Transportation Commission

ADU – Accessory Dwelling Unit

AFFH - Affirmatively Furthering Fair Housing

AI - Analysis of Impediments to Fair Housing

**SANTA CLARA
HOUSING ELEMENT**

ACS - American Community Survey

AMI – Area Median Income

APR – Annual Progress Report

BMP – Below Market Purchase Program

BMR – Below Market Rental Program

CDBG – Community Development Block Grant

CEQA – California Environmental Quality Act

CHAS – Comprehensive Housing Affordability Strategy

CHDO – Community Housing Development Organization

COPA – Community Opportunity Purchase Act

DOF – State of California Department of Finance

HCD – State of California Department of Housing and Community Development

HOME – HOME Investment Partnership Program

HOME-ARP – HOME American Rescue Plan

HPS – Homelessness Prevention System

HUD – Federal Department of Housing and Urban Development

HVAC – Heating Ventilation and Air Conditioning

LIHTC – Low-Income Housing Tax Credit

LMI – Low to Moderate Income

MCC – Mortgage Credit Certificate

MFI – Median Family Income

MRB – Mortgage Revenue Bonds

NCIP – Neighborhood Conservation and Improvement Program

NOAH – Naturally Occurring Affordable Housing

NOFA – Notice of Funding Availability

PHLA – Permanent Local Housing Allocation

RHNA – Regional Housing Needs Allocation

SRO – Single Room Occupancy

SVP – Silicon Valley Power

TBRA – Tenant Based Rental Assistance

TCAC – California Tax Credit Allocation Committee

TOD – Transit-Oriented Development

Relationship to Other General Plan Elements

Since statutory requirements addressed in this Element overlap with other General Plan components, such as Land Use, Transportation, Environmental Quality, and Public Facilities and Services, it is necessary to look at the 2010-2035 General Plan in its entirety for an understanding of the relationship between the Housing Element and these topic areas. This Element meets the minimum standards required by State law for a housing element. Related housing issues can be found elsewhere in the General Plan. This Element is intended to be consistent with the 2010-2035 General Plan, adopted in 2010.

Public Participation

The Housing Element must reflect the values and preferences of the community; therefore, public participation in the planning process is critical to ensuring this Housing Element represents community voices. Government Code Section 65583(c)(9) states: “Include a diligent effort by the local government to achieve public participation of all economic segments of the community in the development of the housing element, and the program shall describe this effort.”

At its core, a Housing Element is an opportunity to have a community conversation about how to address local housing challenges, establish goals, develop policies, and find solutions. As such, the public engagement process for Santa Clara utilized several channels to solicit input from a variety of stakeholders. Key comments gathered from the engagement process are summarized in Appendix A: Community Outreach and a list of general outreach efforts are listed below:

- Community Meetings
- Stakeholders Meetings, Questionnaires, and Interviews
- Digital Surveys: English, Spanish, Vietnamese, Chinese (Simple)
- Community Events
- Community Pop-ups
- Tenant Listening Sessions
- Planning Commission and Community Council Meetings

SANTA CLARA HOUSING ELEMENT

At a high level, the community engagement was utilized to balance and align community input with State Housing Law requirements. With, consistent themes of affordability, housing type and tenure, housing choice, tenant protections, and homelessness the outreach process informed the Housing Plan actions, policies, and actions, and confirmed or highlighted trends identified by the demographic analysis. Specifically, outreach informed the creation of new efforts in the Housing Element as follows:

- Respondents to outreach and commentors were concerned that the designated levels of affordability in the city's existing inclusionary ordinance are increasingly not affordable for many residents. The Housing Element includes a planned effort to update the inclusionary ordinance to increase a greater number of units in the deeper affordability categories and to redefine the City's moderate affordability category to reflect a lower income range. Also proposed is including in the City's Notice of Funding Availability specifications criteria that would prioritize City funding of Extremely Low Income and Very Low Income units.
- Consistent feedback was received through all outlets and demographics of respondents highlighting the need to better address homelessness. The City's newly created Homelessness Task Force comprised of service providers, advocates, and individuals with lived experience of being unhoused have provided recommendations that are being pursued through the creation in a Homelessness Plan with implementation actions.
- Commentors provided feedback on the need for more displacement prevention. The Housing Plan includes the City Council future consideration of new policies and programs that would require no net loss of income restricted units during construction or rehabilitation of existing housing; replacement of existing affordable housing units at the same or lower affordability levels; landlord and City notification and information for tenants affected by efforts that would cause relocation; and require developers to provide relocation benefits beyond State requirements.
- Residents of affordable and special needs housing shared at listening sessions that they have been particularly affected by heat waves and wildfire smoke. As part of the City's CDBG program, the City will promote a Notice of Funding Availability process for installation of HVAC improvements for sensitive populations.

A summary of community engagement meetings and survey data are included in Appendix A: Community Outreach.

Public Review Draft and HCD Draft Housing Element

The Draft Housing Element was posted on the City's website on July 1, 2022. From July 1, 2022 through August 1, 2022, the draft Housing Element was advertised for public review by emails to the City's Housing Element Update email list (944 subscribers as of 8/9/2022), City's Planning

Developer Stakeholder list (110 subscribers as of 8/9/2022), Housing non-profit agencies and developers list (282), and emails to the Planning Commission and City Council. An online comment form was available for the public to provide feedback on the Draft Element. During this time, 24 public comments were received, as well as formal comment letters from Housing Choices, SV@Home, Partnership for the Bay's Future, Carpenters Local 425, Anne Paulson, Life Services Alternatives, TransForm, and Housing Action Coalition. A summary of public comments and the formal comment letters are included in Appendix A: Community Outreach. In response to these comments, the Housing Element was reviewed, and edits were made incorporating public comments including, but not limited to:

- additions and clarifications to the Housing Plan,
- additions and clarifications to the Affirmatively Furthering Fair Housing analysis and clarifications on the Housing Resources calculations
- edits to the Housing Resources parcel inventory
- and other minor edits and clarifications that were less substantive but were provided for readability.

The draft Housing Element was then submitted to HCD on August 22, 2022 for a 90-day review and formal comment. The draft Housing Element remained available on the City's website for additional public review and comment during the HCD review period. During the HCD review period the jurisdiction conducted additional public outreach and received additional public comment that was again incorporated into the draft Housing Element. And, upon receipt of the formal HCD comment letter the draft Housing Element was edited to address the findings specified in the letter and posted for public comment.

The Housing Element was revised in response to these comments and the public was invited to attend and comment on the Housing Element at hearings held before the Planning Commission and the City Council in January 2023. The revised Draft Housing Element was available on the website and at City Hall prior to each hearing.

On January 31, 2023, the City Council adopted Santa Clara's 2023-2031 (6th Cycle) Housing Element and submitted to HCD for their 60-day review. The City received a formal findings/comment letter on March 28, 2023 identifying additional revisions needed to comply with State Housing Element law.

The Adopted Housing Element was revised to address HCDs comments and noticed public hearings were held before the Planning Commission and City Council in June 2023. Emails were sent to the City's Housing Element Update topic subscribers (1,899 as of 5/30/2023) providing updates on the hearing schedule and the availability of draft revisions to the Adopted Housing Element and supporting materials on the website and through the Planning Commission and City Council agendas.

General Plan Consistency

All properties and land uses in the City are governed by the City's General Plan. The General Plan describes the long-term goals for the City's future and guides daily decision-making. The time frame of the General Plan is 2010-2035. The Plan contains the City's official policies on land use and community design, transportation, housing, environmental resources, and health and safety.

The Housing Element is part of the General Plan but operates on a state mandated schedule. The time frame for the Housing Element is 2023-2031, therefore it has been prepared to maintain internal consistency with the current 2035 General Plan as required by State law. Specifically, the sites inventory reflects the capacity under the land use designations of the 2035 General Plan, as amended. Internal consistency will be evaluated and maintained as part of the City's annual progress report (APR) pursuant to Government Code section 65400 and as general plan amendments occur.

The 6th-cycle Housing Element provides an opportunity to update the goals, policies, and actions identified in the 5th-cycle Housing Element (2015-2023), and with the increased focus on Affirmatively Furthering Fair Housing (AFFH), which has heavily influenced the document, will provide a framework for how the City evaluates future General Plan amendments and the next comprehensive General Plan update.

Chapter 13.2

Housing Plan

The goals, policies, and actions delineated in this chapter serve to support the City's vision of providing decent housing and a suitable living environment for every resident.

Goals and Policies

The Housing Plan identifies the City's goals for neighborhood conservation, housing production, housing support, and housing opportunities. The goals are supported by policies which are implemented through a series of actions.

Goal A Create and maintain high-quality, livable, and diverse housing stock within the City of Santa Clara.

Policy A-1: Maintain and improve the quality of residential housing stock, address housing deficiencies and prevent future blight through the encouragement of ongoing maintenance, rehabilitation, and conservation of existing housing stock.

Policy A-2: Provide residential code enforcement for conformance with City Code and Zoning Ordinance regulations.

Policy A-3: Utilize objective design standards to streamline the housing development process.

Policy A-4: Seek collaborative efforts with regional entities and utility service providers to subsidize and incentivize residential energy and water conservation.

Policy A-5: Proactively plan for sufficient housing capacity through infill development that is compatible with existing neighborhoods and through the preparation of neighborhood plans that will support the development of new, complete neighborhoods.

Goal B Designate suitable vacant or underutilized sites for new residential development.

Policy B-1: Identify potential sites for affordable housing units in areas of "high opportunity" as defined by the state.

Policy B-2: Encourage the building of high-density housing on appropriate vacant or underutilized sites.

Policy B-3: Identify and facilitate the award of local, regional, state, and federal funding sources to support housing development, housing infrastructure, and amenities.

SANTA CLARA HOUSING ELEMENT

Policy B-4: Identify and potentially designate surplus land that can accommodate low, very-low, and extremely low-income residential development.

Policy B-5: Encourage high density residential development utilizing the City's higher density and mixed-use residential designations in proximity to transit and other residential services.

Goal C Increase special needs housing opportunities for persons of all economic levels.

Policy C-1: The City shall collaborate with services agencies and community-based organizations to prioritize loans and grants toward housing for seniors, persons with disabilities, persons with mental illness, large families with children, female-headed households, victims of domestic violence, and people who are experiencing homelessness.

Policy C-2: Improve proximity and connections between special needs housing and high-quality transit stops, job centers, educational institutions, day care, open space, community services, and healthy food options.

Policy C-3: Participate in local, regional, State, and federal programs and efforts that support affordable, transitional, supportive, and permanent housing and address the needs of disadvantaged populations and those experiencing homelessness.

Policy C-4: Ensure compliance with all State and federal regulations relating to housing opportunities and the prevention of discrimination based on religion, gender, sexual orientation, marital status, national origin, ancestry, familial status, source of income, or mental or physical disability and any other protected classes under federal and State law.

Goal D Promote a variety of housing types, tenure, and location, including higher density where possible, especially for lower and moderate income and special needs households.

Policy D-1: Continue to identify and apply for funding that supports the development of housing for extremely-low and very low-income residents and special needs households.

Policy D-2: Continue to utilize General Plan land use and zoning updates to provide increased opportunity and flexibility in providing a variety of housing types and tenure.

Policy D-3: Periodically review the City's ordinances, policies, and procedures and make changes to reduce or remove constraints to housing development.

Policy D-4: Promote the use of density bonuses and development incentives to facilitate a variety of housing types and tenure.

Policy D-5: Encourage the construction of accessory and junior accessory dwelling units through outreach, education, and links to regional technical assistance.

Goal E Affirmatively further fair housing by increasing access to opportunity, reducing displacement impacts, reducing cost burden, targeting outreach to lower income residents, and rehabilitating substandard living conditions.

Policy E-1: Improve access to opportunity by working to improve the quality of life for residents of lower income communities, as well as supporting residents' mobility and access to 'high resource' neighborhoods.

Policy E-2: Work to reduce displacement of lower income residents from Santa Clara and to reduce the impact of relocation on low-income households.

Policy E-3: Conduct proactive outreach in areas of the City with less access to opportunity, to build awareness of services including fair housing complaint investigation, landlord tenant mediation, eviction and homelessness prevention counseling, and opportunities to apply for new affordable housing through the HouseKeys application portal.

Policy E-4. Conduct regular outreach, education, and affirmative marketing with community partners that have access to populations experiencing disproportionate housing problems and encourage early participation from a diverse set of residents and other stakeholders in the development of long-range plans and the review of new development proposals.

Policy E-5: Increase public participation by translating public outreach documents (e.g., flyers, surveys) as part of the public participation process and when marketing the City's affordable housing lotteries.

Policy E-6: Continue to provide, when appropriate and feasible, options for either virtual, in-person, or hybrid community meetings to allow for broader community participation.

Implementing Actions

Each Goal outlined in the Housing Plan is supported by one or more policies, which are often implemented by specific actions. Many of the identified actions below will implement multiple policies and goals. Some policies offer direction to Staff and appointed/elected officials in making decisions related to the provision of housing but are not implemented through specific housing programs.

Objectives for each action are either categorized as "Discrete" (objective to be completed during the timeframe of the Housing Element) or "Ongoing" (objective that happens throughout the timeframe of the Housing Element).

Action 1: Provision of a Variety of Housing Types

The City of Santa Clara supports and encourages the development of a variety of housing types to rent and to own in a variety of locations to maintain social and economic diversity in the community. During the Housing Element planning period, the City will promote the development of accessory units, affordable one- and two-story additions to single-family homes, and other lower income housing alternatives.

Funding Source: Departmental Budget

Responsible Agency: Planning Division and Housing and Community Services Division

Discrete Objectives:

- By November 2023, adopt the comprehensive Zoning Ordinance update with revised provisions to allow a variety of housing types through a by-right approval process using objective standards, including:
 - Single-room occupancy units (SROs)
 - Employee housing
 - Emergency shelters
 - Low barrier navigation centers
 - Permanent supportive housing
 - Residential care facilities
- As a part of the Zoning Ordinance Update, acknowledge group homes (residential care facilities) for 7 or more residents and separately enumerate residential care facility uses with 6 or fewer residents.
- As a part of the Zoning Ordinance Update, incorporate changes to state Accessory Dwelling Unit (ADU) law and incentivize the creation of ADUs by removing parking requirements and providing more flexible height standards

- By January 1, 2024, the City of Santa Clara Building Division will:

- Compile and post on the Building Division page a list of information needed to approve a post entitlement phase permit
- Post on the Building Division page an example of a complete approved application and an example of a complete set of post entitlement phase permits for at least 5 types of housing development projects: ADU, duplex, multifamily, mixed use, and townhome.

- By 2026, or as funds become available, through the provision of a notice of funding availability (NOFA), prioritize loans for the development of extremely low and very low-income housing alternatives, such as single-room occupancy (SRO) units, senior housing, family housing, housing for persons with disabilities (including developmental disabilities), licensed residential care homes, etc. (This responds to community feedback that 80-120% AMI housing is no longer affordable enough for many residents in Santa Clara).

- By 2030 increase the stock of:

- Extremely low and very low income rental housing designed for persons with developmental disabilities by 35% from 56 in 2023 to 76.
- Extremely low and very low income rental housing for elderly persons by 20% from 736 in 2023 to 884.
- Income restricted three and four bedroom affordable rental housing units to serve large households in Santa Clara by 20% from 107 units in 2023 to 129 units.

-By 2030, increase access to interim housing units, rapid rehousing, and emergency shelter beds by 30% from 453 in 2023 to 589.

- By the end of 2026, reassess demand for urban farmworker housing (current and retired workers) and gauge the interest and feasibility among developers to utilize the Joe Serna Jr. Farmworker Housing Grant Program when funds become available.

SANTA CLARA HOUSING ELEMENT

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Explore regional and state funding sources to build more housing opportunities for persons with disabilities and for extremely low-income households.
- Report on the production of ADUs through the City's Annual Progress Report (APR). If the pace of ADU production falls below the level necessary to achieve 392 ADUs during the 2023-2031 planning period (approximately 49 ADUs/year), within six months of acceptance of the APR, present a plan to City Council to remove barriers and/or further incentivize ADU production (e.g., through additional Zoning changes).
- Continue participating in the development and implementation of the Santa Clara County Planning Collaborative ADU Program, which will include a central online resource for making it easier to build ADUs, including an ADU Guidebook, gallery of ADU plans, examples/stories of real ADUs that have been built, and an ADU cost calculator.

Relevant Policies: Policy A-3, Policy B-1, Policy B-3, Policy C-1, Policy C-2, Policy C-3, Policy C-4, Policy D-1, Policy D-2, Policy D-3, Policy D-4, Policy D-5

Action 2: Affordable Housing Ordinance

The City's Affordable Housing Ordinance requires developers of residential developments of 10 or more units to provide the following:

- Rental projects - 15% of rental units must be affordable to renters of extremely low, very low, low, and moderate income households, as long as the distribution of affordable units averages to a maximum of 100% of AMI.
- For sale/ownership projects - 15% of units must be affordable to extremely low, very low, low, and moderate income households, as long as the distribution of affordable units averages to a maximum of 100% of AMI.

The Affordable Housing Ordinance has two components: Below Market Rental (BMR) program and Below Market Purchase (BMP) program. The City offers BMR and BMP units to income-qualified households. This program is an important tool for providing very low, low and moderate income housing opportunities.

Funding Source: Inclusionary Housing

Responsible Agency: Housing and Community Services Division

Discrete Objectives:

- By the middle of 2025:

- Update the citywide affordable housing ordinance to align with recent feasibility studies and area plan approvals for the Patrick Henry Drive Specific Plan and the Freedom Circle Focus Area that support deeper affordability requirements (5% very low income, 5% low income, and 5% moderate income) for inclusionary rental and ownership projects. Complying with the proposed affordability requirements would entitle developers to use the Density Bonus provisions of state law.
- Assess the feasibility of updating the ordinance's definition of "moderate income" units from 120% AMI to 100% AMI to further distinguish the difference between "moderate income" and market rents. This responds to stakeholder feedback that 120% AMI is not affordable for many residents and in some cases exceeds market rents.
- Conduct community outreach to present and receive feedback on the feasibility study and bring the study and summary of community feedback to City Council.
- Determine the feasibility and marketability of changes to the BMP program that would keep new BMP homes affordable, or deed restricted, for 20-30 years instead of just five years. Such changes could also make the City's BMP program compatible with the County's new Below Market Rate Partnership program which aims to assist low and very low-income first-time homebuyers. This responds to stakeholder feedback that homeownership is desired but increasingly less attainable in Santa Clara.

SANTA CLARA HOUSING ELEMENT

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Monitor and report the effectiveness of the Affordable Housing Ordinance in expanding affordable housing choices through the City's Annual Progress Report to HCD.
- Conduct in-person outreach once per year in low and moderate resource areas of the City to educate residents on how to use local and regional housing lottery systems and fair housing resources.

Relevant Policies: Policy B-1, Policy B-2, Policy B-3, Policy C-1, Policy C-2, Policy C-3, Policy C-4, Policy D-1, Policy D-4

Action 3: Affordable Housing Incentives and Facilitation

For-profit and nonprofit developers play a significant role in providing affordable housing in Santa Clara. The City will proactively encourage and facilitate the development efforts of developers and organizations for the construction of affordable housing for lower income households, particularly those with special needs including seniors, large households, extremely low income households, households with persons who have disabilities (including developmental disabilities), and licensed residential care homes.

Funding Source: CDBG; HOME; General Fund

Responsible Agency: Planning Division and Housing and Community Services Division

Discrete Objectives:

- By June 2023, create and post an SB 35 checklist and written procedures for processing SB 35 applications.
- Prior to the end of 2024, the City will conduct public outreach and issue a request for proposals to develop mixed income or 100% affordable housing on the vacant former site of the King's Highway Motel on El Camino Real.

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Encourage and assist in efforts to combine public and private funds in joint housing ventures that maximize affordability.
- As appropriate, support and/or partner with housing developers in the application for affordable housing funding, such as providing technical

data, assistance in identifying available and appropriate sites, and expediting review and processing of affordable housing.

- Apply reduced parking requirements for transit-rich environments from the Zoning Ordinance Update to proposed long-range plans, including the El Camino Real Specific Plan and the Santa Clara Station Area Plan, which will positively impact housing, transportation and other plan goals.
- As appropriate, collaborate with neighboring jurisdictions to pursue funding opportunities for affordable housing programs.
- Utilize CDBG and HOME funds in conjunction with other cities' funds to construct or rehabilitate shelters, public service facilities, and to provide housing services.
- Review best practices to identify appropriate incentives and policies to support affordable housing development in the City including fee deferral, reduction, or waivers.

Relevant Policies: Policy B-1, Policy B-2, Policy B-3, Policy B-4, Policy B-5, Policy C-1, Policy C-2, Policy C-3, Policy C-4, Policy D-1, Policy D-2, Policy D-3, Policy D-4, Policy D-5

Action 4: Maintenance of Housing Stock

Since 1976, the City of Santa Clara has assisted more than 1,000 homeowners to rehabilitate and increase the value of their homes through the Neighborhood Conservation and Improvement Program (NCIP). Under the direction of the City of Santa Clara Housing and Community Services Division and in partnership with Rebuilding Together Silicon Valley, NCIP offers technical and financial assistance to qualified homeowners. The program is designed for citywide households with gross incomes at or below 80 percent of County median income. Various types of minor and major repairs may be addressed, including accessibility improvements, re-roofing, plumbing, heating/cooling, electrical, termite damage, foundation, and weatherization. The costs for home repairs are covered through a grant or a loan depending on the size of the project.

The Multi-Family Affordable Energy Efficiency program allows for the City's special revenue funds in partnership with Silicon Valley Power (SVP) to pay for energy consultants to recommend and create a scope of work for specific SVP project rebates. The program also allows for the City to provide assistance for the cost of installation and facilitates the grant administration process.

Funding Source: CDBG, HOME / Special Revenue Funds (in partnership with SVP)

SANTA CLARA HOUSING ELEMENT

Responsible Agency: Housing and Community Services Division

Discrete Objectives:

- By the end of 2024, conduct outreach to single-family home residential care facilities that serve protected classes including persons with disabilities to determine interest in and the feasibility of including these properties in future CDBG/HOME Notices of Funding Availability to address rehabilitation and emergency repairs in these facilities. (This objective responds to feedback from Life Services Alternatives)
- By fall 2025, market future CDBG capital NOFAs to residential care facilities for repair and renovation work to begin in summer 2026. The NOFA shall include extra points for projects that serve persons with disabilities and/or extremely low income households.

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Assist approximately 200 low, very low, and extremely low income homeowners with rehabilitation and emergency repair assistance through loans and grants.
- Continue to conduct inspections of homes on a request and complaint basis, providing referrals to the NCIP and assistance where possible to correct identified issues and problems in both primary and secondary dwelling units.
- Through the CDBG program, to address rising average temperatures, promote NOFA process for installation of HVAC improvements for sensitive populations, including seniors in multifamily housing. (This response to feedback from seniors that live in apartments that do not have air conditioning).

Relevant Policies: Policy A-1

Action 5: Preservation of Assisted Rental Housing & NOAH

To meet the housing needs of persons of all economic groups, the City is committed to guarding against the loss of housing units reserved for lower income households. Four assisted rental projects, with a total of 45 units in Santa Clara are identified to be at potential, albeit very low, risk of conversion to market rate use between June 2028 and October 2031. In addition, the City will monitor the status of naturally occurring affordable housing (NOAH)

Funding Source: Departmental Budget

Responsible Agency: Housing and Community Services Division

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Continue to assist property owners of income restricted housing to make periodic capital improvements to their property, to improve energy efficiency and to extend affordability.
- Continue to monitor and analyze inventory of income restricted projects/units that may be at-risk of losing affordability controls and maintain contact with the property owners regarding long-term plans for their projects.
- Maintain contact with public and nonprofit agencies (qualified entities), such as the Sobrato Family Foundation, BRIDGE Housing, and MidPen Housing that have expressed interest in purchasing, managing, or financing the acquisition of at-risk units.
- Explore new funding sources that can be used for preservation from the Bay Area Housing Finance Authority (BAHFA) and other state sources.
- Work with owners of at-risk income restricted housing to restructure City loans in exchange for extended affordability restrictions.
- Work with tenants of at-risk units, providing them with information regarding tenant rights and conversion procedures, including the property owner requirement to provide a minimum 12-month notice of intent if they choose to opt out of low-income use restrictions.
- By the end of 2024, develop a list of naturally occurring affordable housing (NOAH) locations and meet with interested property owners to facilitate possible connections between sellers, affordable housing developers, and funding sources.
- In 2025, 2027, and 2029, monitor the risk of conversion of naturally occurring affordable housing (NOAH) by contacting owners of the highest risk properties to determine their intentions and continue to coordinate with qualified entities regarding the conversion of NOAH to income-restricted affordable housing.

Relevant Policies: Policy A-1, Policy A-2, Policy A-4, Policy B-1, Policy B-4, Policy C-4, Policy D-1, Policy D-2, Policy D-3, Policy D-4, Policy D-5

Action 6: Acquisition of Multi-Family Housing

As a strategy to expand the City's affordable housing inventory, Santa Clara will continue to explore opportunities for the acquisition/rehabilitation of multi-family housing. As funding permits, the City will work with nonprofit organizations to acquire and rehabilitate deteriorating and distressed properties and convert them into affordable rental housing for lower income households, including those with special needs.

Funding Source: CDBG; HOME

Responsible Agency: Housing and Community Services Division

Discrete Objectives:

- By end of 2025ar, present to the City Council the findings from an analysis of the need/benefit and resources required to implement a Community Opportunity Purchase Act (COPA) program in the City of Santa Clara. A COPA program gives a qualified nonprofit buyer the right to make a first offer on a residential property that is for sale covered by the program.

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Create a database of naturally occurring affordable housing and annually monitor property sales and/or permit applications to identify conversion trends early.
- Explore funding sources available at the regional, state, and federal levels to support affordable housing developers with acquisition/rehabilitation opportunities.
- Work with nonprofit entities to acquire properties and rehabilitate existing multi-family structures to be maintained as or converted into affordable rental housing. Prioritize assistance for housing that is within one half mile of rail transit stations or that is in a high or highest opportunity area according to TCAC.

Relevant Policies: Policy B-1, Policy C-1, Policy C-2, Policy C-3, Policy D-1

Action 7: Code Enforcement Program

Code enforcement is essential to ensuring housing conservation and rehabilitation. The City maintains a strong housing inspection and code enforcement program to ensure adequate maintenance of the housing stock and quality of residential neighborhoods. In an average year, the City receives several thousand complaints related to possible code enforcement violations. In many cases, the responsible party for the code violation is given the opportunity to voluntarily correct the situation and comply with current codes without a penalty.

Funding Source: CDBG, General Fund

Responsible Agency: Planning Division, Building Inspection, Police Department

Discrete Objectives:

- By the second half of 2024, establish pilot multi-family residential housing inspection and educational programs that are self-funded through fees with a focus on census block groups with high concentrations of persons with disabilities, disproportionate housing needs, and overcrowding.

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Proactively and systematically respond to housing code violations.
- Provide special attention to maintaining the stability of residential neighborhoods through development and enforcement of minimum standards of allowed use of the City's streets, as well as maintenance of front and other yard areas visible from the public right-of-way.

Relevant Policies: Policy A-1, Policy A-2, Policy A-3

Action 8: Neighborhood Relations Programs

Since 1990, the Neighborhood-University Relations Committee (NURC) (formerly Student Housing Committee) has been responsible for reviewing student housing issues. NURC meets regularly to facilitate on-going communication and problem solving among City officials, neighborhoods, property owners and Santa Clara University (SCU) officials and students. Santa Clara University has established a Residency Requirement for Freshman and Sophomore students, with some exceptions, to live on campus. In 2022, the City convened an ad hoc Homelessness Task Force which will be replaced in 2023 with a permanent Housing Commission. The new commission will advise on the use of the City's federal CDBG and HOME funds, and on the City's homelessness response efforts.

SANTA CLARA HOUSING ELEMENT

Funding Source: General Fund

Responsible Agency: Housing and Community Services Division

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Starting in late 2023, utilize the newly formed Housing Commission to advise on CDBG and HOME grant administration for capital projects and community services, and on the City's homelessness response efforts.
- Improve the maintenance of student-occupied homes and behavior of the occupants via owner outreach to minimize impacts on neighborhoods surrounding SCU.
- Enhance code enforcement and special police patrols to address the problems in the area.
- Continue to hold meetings three times per year with student tenants, landlords, SCU, residents, and the City to allow opportunities for stakeholders to discuss neighborhood issues and concerns.
- Continue to work with neighbors (residents, businesses, and institutions such as Santa Clara University) to ensure that development is compatible with existing neighborhoods and that neighbors are satisfied with the design, density, and parking requirements of projects.

Relevant Policies: Policy A-1, Policy A-2, Policy A-3, Policy C-4, Policy E-2, Policy E-3

Action 9: Zoning Ordinance

The City is currently undertaking a comprehensive update to its Zoning Ordinance to reflect the current goals and policies of the 2010-2035 General Plan. As part of this update, the City will revise its provisions for parking, including reduced parking requirements and unbundled parking for multi-family uses in transit-rich environments. The Zoning Ordinance Update will also include provisions for a variety of housing types, including low-barrier navigation centers, residential care facilities, employee housing, and SRO housing. The update is expected to be completed in November 2023. The comprehensive Zoning update is intended to bring consistency between the Zoning Ordinance and the General Plan, implementing the General Plan goals by facilitating mixed use development and higher density residential development, protecting existing neighborhoods, and incentivizing redevelopment with appropriate development standards and streamlined procedures.

Funding Source: General Fund

Responsible Agency: Planning Division

Discrete Objectives:

- Complete the comprehensive update to the Zoning Ordinance by November 2023. The Zoning Code will include provisions that:
 - Provide for by-right approval of a variety of housing types (see Action 1)
 - Allow emergency shelters by right in the R-3 and R-4 Residential districts, the C-C and C-R Commercial districts, and the MU-VHD Mixed Use district, and allow emergency shelters in the LI Light Industrial and PQP Public/Quasi-Public districts with the issuance of a Minor Use Permit.
 - Further reduce use of Planned Developments (PDs) by including new high-density residential and mixed-use zoning districts that conform to the General Plan and by allowing by-right approvals that meet objective development standards
 - Any nonvacant site in the 6th Cycle Housing Element Sites Inventory that was identified in a previous (i.e., 5th or 4th Cycle) Housing Element would need to provide a minimum of 20 percent of the units affordable to lower income households in order to be approved by right.
 - Allow by-right expansion of single-family homes built with non-conforming side setbacks and/or one-car garages
 - Bring the City into compliance with State Density Bonus Law (SDBL), including recently adopted legislation that goes into effect in 2023.
 - Revamp residential parking requirements, including unbundling and make appropriate reductions in parking requirements according to housing type (i.e., reduced parking requirements for units for people with developmental and other disabilities)
 - Apply adopted zoning designations to the City's Zoning map, consistent with the City's General Plan, which will add

SANTA CLARA HOUSING ELEMENT

additional housing sites totaling 1,242 units to the El Camino Real corridor.

- Include the ability for the Director of Community Development to allow up to two (2) one-year permit extensions administratively.

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Monitor the Zoning Ordinance for any potential constraints to the development of housing, particularly housing for persons with special needs (including those with developmental disabilities) and amend the Zoning Ordinance to address those constraints.

Relevant Policies: Policy B-2, Policy B-4, Policy B-5, Policy C-2, Policy D-2, Policy D-3, Policy D-4, Policy D-5

Action 10: Adequate Sites Inventory

The City is committed to ensuring that adequate sites at appropriate densities remain available during the planning period, as required by law. The residential sites analysis completed for the 2023-2031 Housing Element indicates the City can accommodate its RHNA of 11,632 units, including 2,872 very low income units, 1,653 low income units, 1,981 moderate income units, and 5,126 above moderate income units.

Funding Source: Departmental Budget

Responsible Agency: Planning Division

Discrete Objectives:

- To supplement the City's housing sites inventory and to prepare for the 7th Housing Element cycle:
 - By the end of 2025, to encourage transit-based development, complete the Santa Clara Station Area Plan.
 - By the end of 2025, to encourage mixed-use development, complete the El Camino Real Specific Plan.

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Monitor the status of approved and proposed projects on the Housing Sites Inventory. Include a table with 6th Cycle APRs that describes the status of projects listed in Table 13.6-2 Pending and Approved Projects.
- As a part of monitoring the status of approved projects, when an entitlement is nearing expiration, proactively notify applicants to apply for extension.
- In the event that proposed projects are not approved within two years of HCD certification of the Housing Element, rework the Housing Element Sites Inventory to include additional sites, as needed, to ensure sufficient capacity to meet the City's RHNA at all income levels.
- Maintain an inventory of housing sites appropriate for a range of income levels and housing types, including supportive housing for persons with disabilities and developmental disabilities.
- Provide information and technical assistance on Federal and State funding sources or referrals to appropriate agencies.
- Monitor and report on the dispersion of affordable units throughout the City.
- Review housing sites inventory at time of development proposal to determine consistency with proposed density and assumed density in the Housing Element.
- Maintain a no net loss of units identified in the sites inventory of this Housing Element. If the assumed density is not entitled, a finding must be made that the displaced units can be redistributed to other opportunity sites.

Relevant Policies: Policy B-1, Policy B-2, Policy B-3, Policy B-4, Policy C-2, Policy D-1, Policy D-2, Policy D-3, Policy D-4, Policy D-5

Action 11: Impact Fees

The City charges various impact fees to provide essential services and facilities to serve new development. The City will conduct an impact fee study to compare the City's fees with surrounding and similar jurisdictions.

SANTA CLARA HOUSING ELEMENT

Funding Source: Departmental Budget

Responsible Agency: Planning Division

Discrete Objectives:

- By the end of 2025 conduct and present the results of an impact fee study to the City Council to assess if impact fees are constraining development or providing a competitive edge for the City. If City fees deviate significantly from those charged by comparable communities for either market rate or affordable developments, take actions by July 2026 to adjust fees as appropriate.
- By the beginning of 2029 conduct and present the results of an impact fee study to the City Council to assess if impact fees are constraining development or providing a competitive edge for the City. If City fees deviate significantly from those charged by comparable communities for either market rate or affordable developments, take actions by July 2031 to adjust fees as appropriate.

Relevant Policies: Policy B-2, Policy B-3, Policy B-5, Policy C-3, Policy D-1

Action 12: Affordable Housing Funding

The City will continue to explore gaining access to additional resources that provide a steady funding stream for affordable housing. These may include, funding from the Bay Area Housing Finance Authority, County, State, federal, housing or land trust funds, and private sector support, partnerships, or philanthropy.

Funding Source: Departmental Budget Planning

Responsible Agency: Planning Division and Housing and Community Services Division

Discrete Objectives:

- By the end of 2025, staff will organize a City Council study session to explore new sources of funding for the development of extremely low income and very low-income affordable housing including strategies to compete for and leverage federal, state, county and philanthropic funds, financial contributions from large employers, local revenue measures and other funding sources.

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Annually, staff will evaluate Notices of Funding Availability (NOFAs) from State, federal, and regional programs and pursue funding applications as appropriate.

Relevant Policies: Policy B-3, Policy C-1, Policy C-3, Policy D-1

Action 13: Residential Displacement

Development in the City has primarily occurred as the recycling of existing marginal commercial and industrial uses into higher density multi-family housing. As such, the City has not yet experienced direct displacement of lower income households due to new development. As redevelopment of existing uses continues, the City will evaluate potential displacement of residents, and develop and adopt measures, as appropriate, to address the risk of direct or indirect displacement of those existing residents. The City will monitor such measures bi-annually for effectiveness and make necessary adjustments.

Funding Source: Departmental Budget

Responsible Agency: Planning Division

Discrete Objectives:

- By the end of 2025 analyze the feasibility of setting a rent deposit limit and present findings from that analysis to the Housing Commission and City Council.
- Within one year of Housing Element adoption, evaluate and provide recommendations to City Council on new programs and policies that prevent displacement and/or facilitate soft landings when relocation is unavoidable. This evaluation will include the following policy areas at a minimum:
 - Requiring no net loss of income-restricted residential units during the construction of new housing or rehabilitation of existing housing.
 - Requiring the replacement of existing affordable units at the same or lower income level as a condition of development.
 - Requiring landlords to notify tenants and the City at least one year in advance of redevelopment and/or potential

SANTA CLARA HOUSING ELEMENT

conversion to market rate housing. Provide information regarding tenant rights and conversion procedures.

- Require developers to provide relocation benefits beyond those required by the state.
- Policies, programs and procedures that help minimize the risk of displacement caused by substandard conditions including through local code enforcement activities.

- Within two years of Housing Element adoption, adopt programs and policies to address displacement with bi-annual monitoring and reporting of effectiveness.

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Continue to fund tenant landlord resources and dispute resolution services.
- Continue to fund the regional Homelessness Prevention System (HPS) lead by Destination Home which provides emergency rent and deposit assistance and housing counseling services.
- Continue to market new below market rate rental (BMR) and ownership (BMP) opportunities broadly, and especially to residents living in lower income areas of the City.

Relevant Policies: Policy B-1, Policy B-2, Policy B-3, Policy B-4, Policy B-5, Policy C-1, Policy C-3, Policy D-2, Policy D-3, Policy D-4, Policy D-5

Action 14: Housing Choice Voucher Program

The Section 8 Housing Choice Voucher Program extends rental subsidies to very low income households, as well as elderly and disabled persons. The subsidy represents the difference between 30 percent of the monthly income and the allowable rent determined by the Section 8 program. Vouchers permit tenants to locate their own housing and rent units beyond the federally determined fair market rent in an area. The City's role in this action will be to advocate for more Housing Choice Vouchers for Santa Clara residents.

Funding Source: Section 8

Responsible Agency: Housing Authority of the County of Santa Clara Continue to participate in and promote the Housing Choice Voucher Program.

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Advocate for additional project and person-based vouchers for seniors and other special needs groups on fixed incomes in Santa Clara through partnerships with the affordable housing developers, Santa Clara County Housing Authority, and the County’s Office of Supportive Housing. This responds to stakeholder feedback that seniors and households on fixed incomes cannot afford rent increases that are based on escalating HCD Income Limits.
- Annually assist the Housing Authority with the promotion of incentives that encourage landlords to accept Housing Choice Vouchers to ensure that voucher holders can find housing and avoid displacement or homelessness.
- Continue to refer households in need to the Housing Authority’s Housing Choice Voucher Application Portal.

Relevant Policies: Policy B-3, Policy C-1, Policy C-3, Policy D-1

Action 15: Homeownership for First-Time Buyers

The City continues to create affordable ownership units through its Inclusionary Housing Policy. HouseKeys partners with Santa Clara staff to offer the units created through the Inclusionary Housing - Below Market Purchase (BMP) program to income-qualified households. The intent of the BMP program is to offer low and moderate income homebuyers an opportunity to purchase a home they would not ordinarily be able to afford. If a BMP homeowner wishes to sell the home between 6-20 years after purchase, they must pay back the City’s remaining note value and a share of the equity increase.

Other resources for affordable homeownership are also available to Santa Clara residents. These include the Housing Trust Silicon Valley, Mortgage Credit Certificates, Habitat for Humanity, and Santa Clara County’s Office of Supportive Housing.

The Housing Trust Silicon Valley Empower Homebuyers SCC program provides loans to low- and moderate-income homebuyers in Silicon Valley in the form of low-interest, second mortgages and down-payment assistance. Santa Clara residents are eligible for two types of assistance offered by the Housing Trust, mortgage assistance and gap assistance.

The Mortgage Credit Certificate Program (MCC), administered by the County of Santa Clara Office of Affordable Housing, provides financial assistance to first-time homebuyers. The Santa Clara County MCC tax credit reduces the federal income taxes of qualified borrowers purchasing

SANTA CLARA HOUSING ELEMENT

qualified homes, thus having the effect of a mortgage subsidy. The current tax credit rate is up to 15 percent of the interest paid to the lender on the first loan.

Habitat for Humanity East Bay/Silicon Valley provides ownership opportunities for first-time homebuyers via a sweat equity and savings plan programs. Households, friends, and family contribute 250-500 hours of sweat equity into the construction of their homes.

Santa Clara County's Measure A also sets aside funds to assist first time homebuyers. In 2023, the County will roll out new programs that help low income households attain home ownership.

Additionally, SB 9, signed into law in September of 2021 and effective January 1, 2022, allows property owners within single-family residential zones to build two units and/or to subdivide an existing lot into two parcels, for a total of four units that can each be sold as separate units, can help enable affordable home ownership for first time buyers.

Funding Source: Inclusionary Housing

Responsible Agency: Housing and Community Services Division and HouseKeys

Discrete Objectives:

- By the end of 2024, present to the City Council proposed changes to the BMP program to keep homes affordable for longer than 5 years by requiring resale to income eligible homeowners in the program. This change could also make Santa Clara's BMP program compatible with Santa Clara County subsidies that are intended to make homeownership attainable for low and very low-income households. If approved, implement the change by December 2025.

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Continue to promote homeownership for first time buyers through units that are income restricted and marketed under the City's inclusionary ordinance.
- Encourage program participation for all levels of household income that meet eligibility criteria.
- Continue to promote homebuyer assistance programs through the Housing Trust Silicon Valley, County of Santa Clara, Habitat for Humanity, and the County's Office of Supportive Housing (Measure A).

Relevant Policies: Policy B-3, Policy C-1, Policy D-1

Action 16: Fair Housing Program

The City contracts with a qualified fair housing services provider to provide fair housing services to its residents. Currently, the City utilizes Project Sentinel, a nonprofit agency that provides information and dispute resolution services to tenants, landlords, and roommates. Since 2009, Project Sentinel has assisted over 1,000 Santa Clara households and landlords to resolve disputes through counseling, conciliation, and mediation.

Funding Source: CDBG

Responsible Agency: Housing and Community Services Division

Discrete Objectives:

- By the end of 2025, bring forward a proposal for City Council consideration to write an ordinance that requires landlords to provide a City approved multilingual brochure to all tenants with every lease signing that summarizes landlord and tenant rights under state law. If the ordinance is approved, conduct a series of educational workshops with local landlords and tenants.
- By fall 2028, develop a CDBG Notice of Funding Availability that awards additional points to place-based capital improvements that improve access to opportunities in HUD designated low-income and distressed areas of the City.
- By June 2027, complete construction of 36 curb ramps, 12 curb bulb-outs, 50 feet of new sidewalk, 2 new traffic signals, 2 new Pedestrian Hybrid Beacons, 2 new Rectangular Rapid Flashing Beacons, upgrade 2 existing traffic signals, install 10 streetlights, and install over 5,000 ft of Class II & III bike lanes at various locations along Cabrillo Ave, Lafayette St, Monroe St, Royal Dr, Scott Blvd, and Warburton Ave in Central Santa Clara to improve safety and mobility. This area overlaps with an MTC Equity Priority Community and is considered a Low Opportunity Area by TCAC.
- By 2027, Market the Silicon Valley Hopper ride share service Citywide in Central and North Santa Clara once it becomes available. This service will help connect lower income residents to major employment centers, VTA Light Rail, Caltrain and the future BART station.

SANTA CLARA HOUSING ELEMENT

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Continue to refer tenant-landlord complaints to an agency offering mediation, within five (5) business days of receiving the complaint.
- Provide referral services and promotional support to link those experiencing discrimination in housing with public or private groups who handle complaints against discrimination.
- Seek state and federal enforcement of fair housing laws and continue to cooperate with local agencies investigating claims of discrimination in lending practices and predatory lending.
- Work with Project Sentinel and other nonprofit organizations to improve the City's webpage to include more landlord/tenant rights resources, rights regarding reasonable accommodation, and contact information in a format that is easily translatable using a web browser.
- Partner with nonprofit organizations and hold in-person open house events and meetings at least twice per year to distribute fair housing information, resources about how to apply for affordable housing, distribute multilingual collateral (Spanish, Chinese, and Vietnamese) about landlord tenant rights under state law, rights regarding reasonable accommodation, and other forms of assistance and housing services
- Refer disputes between property owners to the County Human Relations Commission's Dispute Officer within five (5) business days of the City being informed of the dispute.

Relevant Policies: Policy B-3, Policy C-1, Policy C-4, Policy D-1

Action 17: Homeless Services

In 2022 the City convened a six-month Homelessness Taskforce. The Taskforce included stakeholders with a range of perspectives and experience to help identify priorities and provide recommendations related to the development of a local plan to reduce homelessness and its impacts. Additionally, the City's Police Department conducts outreach through the Community Response Team and the Housing and Community Services Division administers grants to several local agencies that offer services to the homeless. The following agencies have received funding from the City:

- WeHope Dignity on Wheels Mobile Shower and Laundry Service

- Santa Clara County Homelessness Prevention System (HPS)
- Santa Clara County case management for permanent supportive housing clients
- Next Door Solutions to Domestic Violence
- Emergency Housing Consortium
- St. Justin Community Ministry
- Bill Wilson Center
- Abode Services
- Community Technology Alliance
- InnVision

Funding Source: CDBG, HOME, HOME ARP, PHLA

Responsible Agency: Housing and Community Services Division

Discrete Objectives:

- Adopt and begin implementation the City's Homelessness Response Plan by fall 2023. The Plan identifies the following priority areas:

- Conduct proactive street outreach with the goal of assessing people for supportive housing
- Address basic needs of people living outside, including shelter, health, and hygiene
- Build community understanding of the causes, needs, and experience of homelessness
- Reduce the impacts of unsheltered homelessness throughout the community
- Create broad based support for interim and permanent supportive housing as well as Extremely Low Income (ELI) housing development across the City
- Prevent homelessness for at-risk City residents

SANTA CLARA HOUSING ELEMENT

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Continue to provide street outreach through the Police Department's Community Response Team and additional proactive strategies to ensure that people experiencing homelessness in the City are assessed as part of the Coordinated Entry System and connected to other services.
- Continue to invest HOME funds into the City's Tenant Based Rental Assistance (TBRA) program.
- Continue to invest in the regional Homelessness Prevention System to provide emergency rent assistance, deposit assistance, and case management services.
- Target services to vulnerable populations, including at-risk youth, seniors, and persons with disabilities and unhoused families with children.

Relevant Policies: Policy B-3, Policy C-3, Policy D-1

Action 18: Shared Housing

Shared housing can be an affordable alternative for lower income seniors, disabled, and special needs residents when sufficient support and property management services are included. The City can support this housing type through acquisition and rehabilitation subsidies.

Funding Source: Departmental Budget, CDBG

Responsible Agency: Housing and Community Services Division

Discrete Objectives:

- In 2024, evaluate the need for shared housing services as part of the 2025-2030 HUD Consolidated Planning process.
- By 2025 explore ways to improve City staff capacity to help seniors and other special needs groups navigate the housing market and to access subsidized housing. (This objective was added in response to feedback from seniors, senior care providers, and Project Sentinel)
- By 2026 explore ways to increase access to service enhanced senior housing with rents capped at 30 percent of income versus based on median income limits. Present findings to the Senior Commission and

City Council. (This objective was added in response to feedback from seniors).

Ongoing Objectives (on an annual basis, unless otherwise noted):

- Continue to support the creation of new shared housing for lower income persons with developmental disabilities by including acquisition or rehabilitation as a category in a notice of funding availability for affordable housing prior to 2026 (This objective was revised to reflect community feedback that home sharing can work well for persons with developmental disabilities, but not as well for elderly residents).

Relevant Policies: Policy B-1, Policy C-2, Policy C-3, Policy C-4, Policy D-1, Policy D-2

Action 19: Tasman East Specific Plan Amendment

The Tasman East Specific Plan, adopted in 2018, has approved and proposed projects totaling 4,438 units, nearly the adopted capacity of 4,500 units. With approximately 10 acres of land zoned and still available for redevelopment, the City can help to facilitate the development of additional residential units by amending the Specific Plan and creating environmental clearance for those units.

Funding Source: Departmental Budget, SB2 grant

Responsible Agency: Planning Division

Discrete Objectives:

- By the end of 2023, adopt a Specific Plan amendment and associated environmental clearance allowing an additional 1,500 dwelling units in the Tasman East plan area. The amendment will include an update to the Tasman East Infrastructure Fee, to ensure that costs are shared equitably between developers.

Relevant Policies: Policy B-1, Policy B-2, Policy B-3, Policy B-4, Policy C-2, Policy D-1, Policy D-2, Policy D-3, Policy D-4, Policy D-5

Action 20: Water and Sewer Affordable Housing Service Provisions

Government Code, § 65589.7 requires Cities to have specific procedures to grant priority for water and sewer service to developments with units affordable to lower-income households.

SANTA CLARA
HOUSING ELEMENT

Funding Source: Departmental Budget

Responsible Agency: Water and Sewer Department

Discrete Objectives:

- Within six months of certification of the Housing Element, adopt procedures to grant priority for water and sewer service to developments with units affordable to lower-income households, per Government Code, § 65589.

Relevant Policies: Policy D-2, Policy D-3

Quantified Objectives

Table 13.2-1 summarizes the City of Santa Clara’s quantified housing objectives for the 2023-2031 Housing Element planning period.

Table 13.2-1: Quantified Objectives

	<i>Income Level</i>					
	<i>Extremely Low</i>	<i>Very Low</i>	<i>Low</i>	<i>Moderate</i>	<i>Above Moderate</i>	<i>Total</i>
Units to be Constructed¹	1,436	1,436	1,653	1,981	5,126	11,632
Units to be Rehabilitated²	300				-	300
Units to be Conserved³	75			-	-	75

Source(s): City of Santa Clara, 2022

Notes:

1. Corresponds to RHNA units that potentially could be constructed using public and/or private sources over the planning period, given local land resources, constraints, and programs.
2. Number of existing income-restricted and unrestricted affordable units expected to be rehabilitated during the planning period.
3. Includes preservation of the 45 existing at-risk affordable housing units throughout the planning period (see Table 13.4-15) and additional affordable units that don’t have expiring affordability restrictions but are showing signs of potential financial distress.

* *The quantified objectives for units to be rehabilitated and units to be conserved are supported by the following Actions in the Housing Plan: Action 3 Affordable Housing Incentives and Facilitation; Action 4 Maintenance of Housing Stock; Action 5 Preservation of Assisted Rental Housing; Action 6 Acquisition of Multi-Family Housing; Action 7 Code Enforcement Program; Action 8 Neighborhood Relations Program.*

Chapter 13.3

Affirmatively Furthering Fair Housing

Introduction and Overview of AB 686

In January 2017, Assembly Bill 686 (AB 686) introduced an obligation to affirmatively further fair housing (AFFH) into California state law. AB 686 defined “affirmatively further fair housing” to mean “taking meaningful actions, in addition to combat discrimination, that overcome patterns of segregation and foster inclusive communities free from barriers that restrict access to opportunity” for persons of color, persons with disabilities, and other protected classes.

AB 686 requires that all housing elements prepared on or after January 1, 2021, assess fair housing. An assessment of fair housing must consider the elements and factors that cause, increase, contribute to, maintain, or perpetuate segregation, racially or ethnically concentrated areas of poverty, significant disparities in access to opportunity, and disproportionate housing needs.

This chapter will first identify conclusions drawn from the local knowledge summarized in Appendix A and from Chapter 13.4 Housing Needs Assessment. Next the analysis will assess fair housing issues using data and maps and analysis of the Housing Element site inventory. The chapter concludes with a prioritized list of contributing factors based on the above conclusions. Each contributing factor is thoroughly addressed by the Goals, Policies, and Actions of the Housing Plan in Chapter 13.2.

Local Knowledge:

Appendix A details the extensive outreach process that was conducted for this Housing Element and the feedback that was gathered. The following summarizes key themes that were noted from this local input:

- There is a clear need to build more extremely low and very low-income housing particularly for seniors, people with developmental disabilities, low wage workers, and large families to reduce housing cost burden, overcrowding, displacement, and to prevent homelessness.
- There is a need for more senior housing options that are based on actual incomes not Area Median Income.
- There is concern around rent gouging and high deposits which can lead to displacement.
- There is a need to monitor naturally occurring affordable housing and deed restricted housing that is at-risk of conversion or redevelopment.
- There is a need to prevent and reduce homelessness and its impacts in Santa Clara.
- Residents with disabilities are having trouble getting reasonable accommodations from housing providers, there is a need for more licensed care facilities, and there is a need for more housing choices in new affordable housing for persons with disabilities.
- There is a need to increase first-time homeowner opportunities and to provide more workforce housing for teachers, emergency responders, and nonprofit workers.
- Seniors and others with limited access to the internet need more assistance with searching and applying for affordable housing opportunities.
- There is a need to improve outreach about affordable housing opportunities for Hispanic/Latino, Chinese, Vietnamese, Filipino and possibly other residents who have limited English proficiency.
- There is a need for ongoing education on tenant and landlord rights given recent changes to state law.
- Access to clean air is a concern for residents living near freeways and expressways and in affordable housing without air conditioning given the increase in extreme heat and wildfire pollution.

Chapter 13.4 includes a housing needs analysis. The following summarizes key themes that were noted in that chapter:

- Since 2010, the percentage of Santa Clara's population that is White (Non-Hispanic/Latino) decreased by 4%, Hispanic/Latino decreased by 2% and Asian/Pacific Islander increased by 6%.
- Santa Clara's population is younger and higher income compared with the County
- Rents and home prices are higher in Santa Clara compared with the County

- Vacancy rates in Santa Clara are lower compared with the County, especially for larger housing units
- Santa Clara has a 1% higher rate of overcrowding compared with the County.
- Large households, Female Headed Households, and Elderly (65+ years) are three of the largest special needs groups in Santa Clara.
- Female-headed households in Santa Clara live in poverty at a much higher rate than all households living in poverty.
- The most common type of disability in Santa Clara was ambulatory followed by difficulty living independently.
- The number of residents with developmental disabilities age 62 and older is growing Countywide. As older adults live longer and as licensed care facilities close, there will be fewer care options for such adults unless new housing options are developed.
- There are insufficient shelter and transitional housing options for unhoused residents in Santa Clara and unsheltered homelessness has increased since 2019.
- Overcrowding affects renter households more.

Assessment of Fair Housing

The analysis must address patterns at a regional and local level and trends in patterns over time. This analysis compares the locality at a county level for the purposes of promoting more inclusive communities.

Sources of Information

- U.S. Department of Housing and Urban Development (HUD) Comprehensive Housing Affordability Strategy (CHAS) reports
- U.S. Census Bureau's Decennial Census (referred to as "Census") and American Community Survey (ACS)
- HCD's AFFH Data Viewer
- Local Knowledge

In addition, HCD has developed a statewide AFFH Data Viewer. The AFFH Data Viewer consists of map data layers from various data sources and provides options for addressing each of the components within the full scope of the assessment of fair housing. The data source and time frame used in the AFFH mapping tools may differ from the ACS data. While some data comparisons may have different time frames (often different by one year), the differences do not affect the identification of possible trends.

Fair Housing and Housing Resources

In addition to updating the Housing Element of the City of Santa Clara's General Plan, the jurisdiction has been participating in the regional Fair Housing Assessment being prepared for

SANTA CLARA HOUSING ELEMENT

the U.S. Department of Housing and Urban Development (HUD). The process has provided an initial framework for the local analysis of fair housing within the City and has been informed by additional demographic research and local knowledge that has supported the City's Housing Plan Goals, Policies, and Actions. Starting in the 5th cycle, the City has utilized "specific plans" as an effective means addressing housing needs within the context of fair housing, as the "specific plan" process is a public process utilizing community engagement, the City's Affordable Housing Ordinance, and increased densities to provide housing for a variety of income levels. "Specific plans" also allow for more complete communities that integrate market rate and affordable housing with park space and other amenities.

Additionally, based upon the AFFH analysis provided in this chapter, the process can be further enhanced by the application of this fair housing lens in the development of the City's Housing Plan to increase monitoring and enforcement, increased and deeper community outreach and engagement, additional attention to protected classes, and being proactive in addressing the root causes of housing disparity before they occur or become further entrenched. In light of the increased housing activity, the City has not experienced displacement as the "specific plan" areas are transitioning into mixed-use housing developments and not redeveloping existing housing stock. Nonetheless, the City has identified displacement as an issue to monitor and develop specific actions and policies in the Housing Plan, as part of the five focus areas previously mentioned in this chapter.

Even though the City relies heavily upon "specific plan" parcels to meet its RHNA, additional housing development is not exclusive to the parcels identified in the Housing Element. Additionally, engagement with the community on additional specific plan areas will continue as we prepare the jurisdiction for the 7th cycle Housing Element as the parcels identified in the Housing Element for housing development are located in or near Moderate to High Resources Areas, and not in areas of concentrated poverty. Further, the investment in and around "specific plan" areas and additional amenities in the Northern portion of the jurisdiction has resulted in a change from moderate to high resource. Additionally, the Northern portion of the jurisdiction contains approximately 74% of the units in the City's Sites Inventory. While most of these project areas are primarily in the Northern portion of the jurisdiction, housing development has taken place, and will continue to take place, throughout the jurisdiction. This is more evident in the distribution of permitted ADUs in the City, and general interest in the El Camino Real corridor, where the City is in the process of re-evaluating the proposed specific plan for that portion of the community.

Fair Housing Enforcement, Education and Outreach

Fair housing enforcement and outreach capacity refers to the ability of a locality and fair housing entities to disseminate information related to fair housing laws and rights and provide outreach and education to community members. Enforcement and outreach capacity also includes the ability to address compliance with fair housing laws, such as investigating complaints, obtaining remedies, and engaging in fair housing testing. The Fair Employment and Housing Act and the Unruh Civil Rights Act are the primary California fair housing laws. California state law extends anti-discrimination protections in housing to several classes that are not covered by the federal Fair Housing Act (FHA) of 1968, including prohibiting discrimination on the basis of sexual orientation. Table 13.3-1 below describes the Fair Housing service providers in Santa Clara County and the City of Santa Clara, including local housing, social, and legal services.

Table 13.3-1: Fair Housing Providers in Santa Clara County and Santa Clara

<i>Provider</i>	<i>Services</i>
Project Sentinel	Provides education and counseling to community members and housing providers about fair housing law. Investigates complaints and provides advocacy for those experiencing housing discrimination.
Bay Area Legal Aid	Largest civil legal aid provider serving seven Bay Area counties. Has a focus area in housing preservation and a homelessness task force to provide legal services and advocacy for those in need.
Law Foundation of Silicon Valley	Provides free legal advice and representation on housing matters to low-income families and individuals in Santa Clara County.
Senior Adults Legal Assistance	Non-profit elder law office supporting residents 60 years and older in Santa Clara County to live safely and independently. Attorneys provide legal services from advice and referrals to legal representation.
Asian Law Alliance	A non-profit providing equal access to the justice system for Asian and Pacific-Islander low-income populations in Silicon Valley. Providing legal counseling and language assistance for individuals seeking housing.

Source(s): City of Santa Clara, 2022

California's Department of Fair Employment and Housing (DFEH) has statutory mandates to protect the people of California from discrimination pursuant to the California Fair Employment and Housing Act (FEHA), Ralph Civil Rights Act, and Unruh Civil Rights Act (with regards to housing).

SANTA CLARA HOUSING ELEMENT

The FEHA prohibits discrimination and harassment on the basis of race, color, religion, sex (including pregnancy, childbirth, or related medical conditions), gender, gender identity, gender expression, sexual orientation, marital status, military or veteran status, national origin, ancestry, familial status, source of income, disability, and genetic information, or because another person perceives the tenant or applicant to have one or more of these characteristics.

The Ralph Civil Rights Act (Civ. Code, § 51.7) guarantees the right of all persons within California to be free from any violence, or intimidation by threat of violence, committed against their persons or property because of political affiliation, or on account of sex, race, color, religion, ancestry, national origin, disability, medical condition, genetic information, marital status, sexual orientation, citizenship, primary language, immigration status, or position in a labor dispute, or because another person perceives them to have one or more of these characteristics.

The Unruh Civil Rights Act (Civ. Code, § 51) prohibits business establishments in California from discriminating in the provision of services, accommodations, advantages, facilities and privileges to clients, patrons and customers because of their sex, race, color, religion, ancestry, national origin, disability, medical condition, genetic information, marital status, sexual orientation, citizenship, primary language, or immigration status.

Table 13.3-3 summarizes fair housing cases filed by the federal Office of Fair Housing and Equal Opportunity Housing in Santa Clara County. The table indicates that discrimination cases based on disability were by far the most common followed by race, and familial status (households with at least one child under 18).

Table 13.3-3: Number of FHEO Filed Cases by Protected Class in Santa Clara County (2015–2020)

<i>Year</i>	<i>Number of Filed Cases</i>	<i>Disability</i>	<i>Race</i>	<i>National Origin</i>	<i>Sex</i>	<i>Familial Status</i>

The City funds fair housing education, investigation, enforcement, and outreach annually. In program year 2020, the area non-profit Project Sentinel received \$20,000 of local funds for the provision of fair housing services. Project Sentinel provides comprehensive fair housing services including investigation, counseling, referral, and education designed to reduce the incidence of illegal discrimination in housing. In program year 2020, the agency assisted 31 individuals and conducted landlord/tenant mediation assisting 336 households, along with outreach activities to residents, service providers, and housing providers through education and information sessions on fair housing law and Project Sentinel's services.

Services that were not provided include (2.) Case tested by phone; (4.) Case referred to HUD and (8.) Case accepted for full representation. The most common action(s) taken/services provided are providing clients with counseling, followed by sending testers for investigation, and conciliation with landlords. Regardless of actions taken or services provided, almost 45% of cases are found to have insufficient evidence. Only about 12% of all cases resulted in successful mediation.

The City of Santa Clara complies with all State and federal fair housing laws and regulations and is not aware of any fair housing findings, lawsuits, enforcement actions, settlements, or judgements.

Fair Housing Testing

Fair housing testing is a randomized audit of property owners' compliance with local, state, and federal fair housing laws. Initiated by the Department of Justice's Civil Rights Division in 1991, fair housing testing involves the use of an individual or individuals who pose as prospective

SANTA CLARA HOUSING ELEMENT

renters for the purpose of determining whether a landlord is complying with local, state, and federal fair housing laws.

California Department of Fair Employment and Housing (DFEH)

Residents may submit complaints to the DFEH, which is the statewide agency that enforces fair housing laws. The DFEH will investigate and determine whether or not the complainant has a right to sue. In 2018, DFEH received over 600 complaints from residents of Santa Clara County.

Assessment of Fair Housing Issues

The following analysis will use data and maps to analyze patterns of segregation, racial or ethnic concentrations of poverty, disparities in access to opportunity, and disproportionate housing needs. The City's land use and development patterns have created three distinct areas to help focus this discussion. These areas will be referenced throughout the assessment:

Northern Santa Clara: Highway 237 south to Highway 101: Northern Santa Clara is a mix of industrial, office, residential, and has several large specific plan areas where new residential and mixed-use neighborhoods are beginning to take shape as industrial areas are converted.

Central Santa Clara: Highway 101 south to the Union Pacific railroad tracks. Central Santa Clara has been historically industrial with very few residential areas. Three large, mostly market-rate, residential projects have recently been approved in this area: Lawrence Station Area Plan, Santa Clara Square, and Gateway Crossings. In addition to these, a small pocket of older single family, duplex, and apartments is located north of the railroad tracks on the west side of Lafayette Street.

Southern Santa Clara: Union Pacific railroad tracks south to Stevens Creek Boulevard. The southern part of Santa Clara historically has been composed of older single-family neighborhoods, Santa Clara University, and the El Camino Real and Steven's Creek commercial corridors.

Race/Ethnicity

Segregation is defined as the separation or isolation of a race/ethnic group, national origin group, individuals with disabilities, or other social group by enforced or voluntary residence in a restricted area, by barriers to social connection or dealings between persons or groups, by separate educational facilities, or by other discriminatory means.

To measure segregation in a given jurisdiction, the US Department of Housing and Urban Development (HUD) provides racial or ethnic dissimilarity trends. Dissimilarity indices are used to measure the evenness with which two groups (frequently defined on racial or ethnic characteristics) are distributed across geographic units, such as block groups within a

community. The index ranges from 0 to 100, with 0 meaning no segregation and 100 indicating complete segregation between the two groups. The index score can be understood as the percentage of one of the two groups that would need to move to produce an even distribution of racial/ethnic groups within the specified area. For example, if an index score is above 60, 60 percent of people in the specified area would need to move to eliminate segregation.

The following shows how HUD views various levels of the index:

- <40: Low Segregation
- 40-54: Moderate Segregation
- >55: High Segregation

Ethnic and racial composition of a region is useful in analyzing housing demand and any related fair housing concerns as it tends to demonstrate a relationship with other characteristics such as household size, locational preferences, and mobility. Prior studies have identified socioeconomic status, generational care needs, and cultural preferences as factors associated with “doubling up”—households with extended family members and non-kin. These factors have also been associated with ethnicity and race. Other studies have also found that minorities tend to congregate in metropolitan areas, though their mobility trend predictions are complicated by economic status (minorities moving to the suburbs when they achieve middle class) or immigration status (recent immigrants tend to stay in metro areas/ports of entry).

Regional Trends

Santa Clara County is a large, diverse jurisdiction where people of color represent a majority of the population. As of the 2019 census, 36 percent of residents were Asian, 31.5 percent of residents with non-Hispanic White, followed by Hispanic or Latino residents at 25 percent. The complete racial breakdown for the County can be seen in Table 13.3-5.

While overall rates of segregation in the County are moderate, rates have been growing since the 1990s. The most segregated group has consistently been Hispanic residents with an index score of 48.57 in 2010, up from 44.97 in 1990. The next most segregated group is Black residents with a 2010 index score of 47.67 up from 43.86 in 1990. This is followed by Asian residents with a 2010 index score of 30.21 up from 25.33 in 1990. Overall, in 2010, non-white and white residents had an index score of 31.5 which is considered low segregation, although this is up from 1990 when the score was 28.67.

Figure 13.3-1 geographically displays the percentage of the non-White population in the County. The higher percentage of non-White populations are concentrated around San Jose, Milpitas, Santa Clara, and Cupertino. In these areas, the non-White population percentage is as high as 61 to 80 percent. The largest racial group in the County is made up of Asian residents (36 percent), followed by White, non-Hispanic residents (31.5 percent), and Hispanic or Latino residents (25 percent).

HOUSING ELEMENT

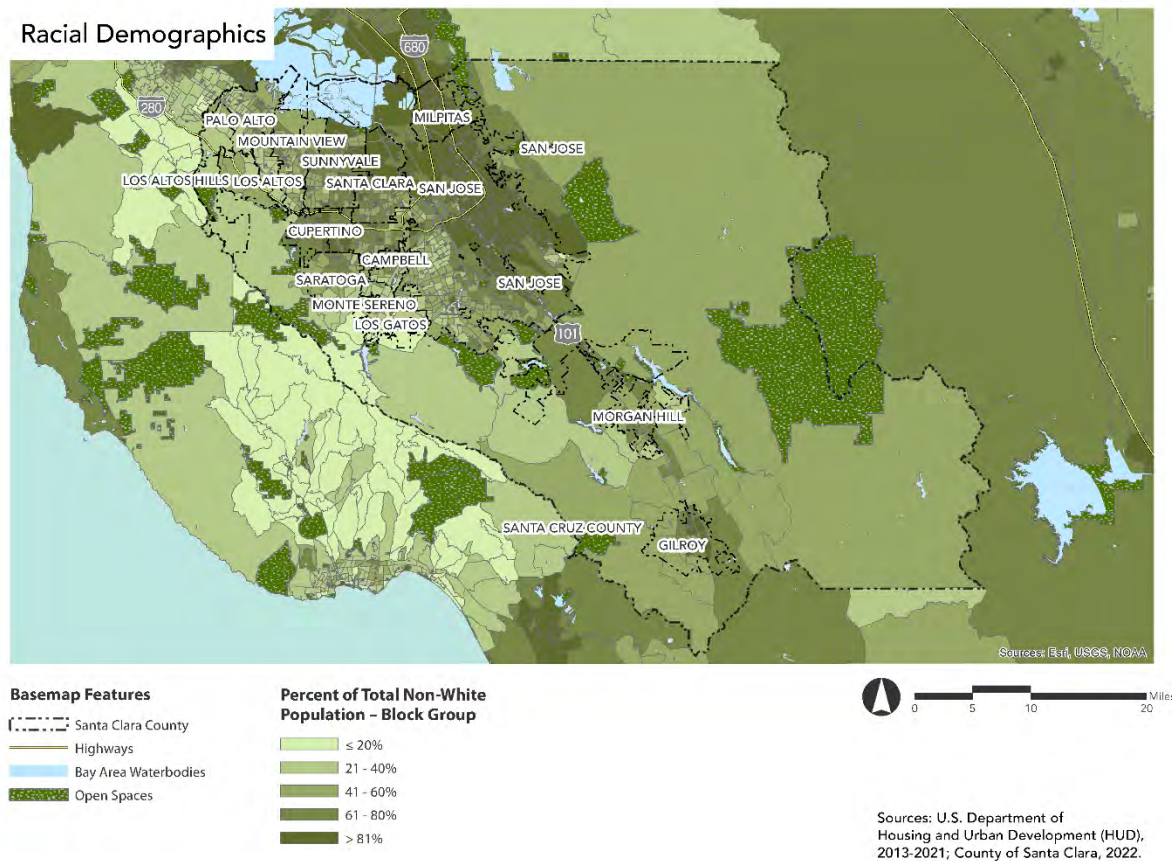

Table 13.3-4: Racial/Ethnic Dissimilarity Trends (1990–2020)

<i>Dissimilarity Index</i>	<i>Santa Clara County</i>			
	<i>1990 Trend</i>	<i>2000 Trend</i>	<i>2010 Trend</i>	<i>Current (2020 Census Block Group)</i>
Non-White/White	28.67	28.49	27.28	31.50
Black/White	43.86	41.59	41.88	47.67
Hispanic/White	44.97	46.52	46.26	48.57
Asian or Pacific Islander/White	25.33	26.68	25.6	30.21

Source(s): HUD's Affirmatively Furthering Fair Housing Tool (AFFH-T), Table 13.3-5 – Racial/Ethnic Dissimilarity Trends, Data version: AFFHT006, released July 10th, 2020.

Note: Table 13.3-4 presents Decennial Census values for 1990, 2000, 2010, all calculated by HUD using census tracts as the area of measurement. The "current" figure is calculated using block groups from the 2010 Decennial Census, because block groups can measure segregation at a finer grain than census tracts due to their smaller geographies. See https://www.hud.gov/program_offices/fair_housing_equal_oppl/affh for more information.

FIGURE 13.3-1: REGIONAL RACIAL DEMOGRAPHICS (2021)

Local Trends

The demographics of Santa Clara are somewhat reflective of the County as a whole. The largest racial group in Santa Clara is Asian, Non-Hispanic at 43 percent which is also the largest racial group in the County. White, Non-Hispanic residents make up the second largest group in both the City and County at 31.5 percent. The largest difference in racial group between Santa Clara and the County is with Hispanic residents. In the County, Hispanic residents make up 25 percent of the population, while in the City they make up 17.3 percent.

Table 13.3-5: Racial Composition Santa Clara County and Santa Clara (2019)

	<i>Santa Clara County</i>	<i>Santa Clara</i>
White, non-Hispanic	31.5%	31.5%
Black or African American, non-Hispanic	2.3%	3%
American Indian and Alaska Native, non-Hispanic	0.2%	0.1%
Asian, non-Hispanic	36%	43%

	<i>Santa Clara County</i>	<i>Santa Clara</i>
Native Hawaiian and Other Pacific Islander, non-Hispanic	0.3%	0.6%
Some other race, non-Hispanic	0.2%	0.2%
Two or more races, non-Hispanic	3.5%	4%
Hispanic or Latino	25%	17.3%

Source(s): American Community Survey, 2015-2019

Table 13.3-6 below provides the dissimilarity index values indicating the level of segregation in Santa Clara between white residents and residents who are Black, Hispanic, or Asian/Pacific Islander. The table also provides the dissimilarity index between white residents and all residents of color in the City, and all dissimilarity index values are shown across three time periods (2000, 2010, and 2020).

In the City of Santa Clara racial and ethnic integration trends are less segregated than County trends in 2020. The highest segregation in the City is between Asian or Pacific Islander and white residents. Santa Clara's Asian or Pacific Islander / white dissimilarity index means that 22.8% of Asian (or white) residents would need to move to a different neighborhood to create perfect integration between Asian or Pacific Islander residents and white residents.

For context and comparison, the Santa Clara County column provides the dissimilarity index values for these racial group pairings in 2020.

Table 13.3-6: Racial/Ethnic Dissimilarity Trends within Santa Clara

<i>Dissimilarity Index</i>	<i>Santa Clara County</i>	<i>Santa Clara</i>		
	2020	2000	2010	2020
Non-White/White	31.5	22.9	23.7	18.9
Black/White	47.67	19.9	21.0	22.3
Hispanic/White	48.57	21.2	21.1	17.7
Asian or Pacific Islander/White	30.21	27.6	28.6	22.8

Source(s): IPUMS National Historical Geographic Information System (NHGIS). U.S. Census Bureau, 2020 Census State Redistricting Data (Public Law 94-171) Summary File, 2020 Census of Population and Housing, Table P002. Data from 2010 is from U.S. Census Bureau, Census 2010, Table P4. Data for 2000 is standardized to 2010 census tract geographies and is from U.S. Census Bureau, Census 2000, Table P004.

Note: If a number is marked with an asterisk (*), it indicates that the index is based on a racial group making up less than 5 percent of the jurisdiction population, leading to unreliable numbers.

Within Santa Clara there are some notable geographic differences in racial demographics. The northern and central areas of Santa Clara have a non-white population between 61 to 80 percent.

In the northern part of the city there are a few tracts where this percentage drops to 41 to 60 percent. The southern part of the city has a patchwork pattern of tracts with non-White groups between 21 to 40 percent and 41 to 60 percent. There are a few tracts where this percentage goes as low as 20 percent and below, or as high as 61 to 80 percent, but these are just small pockets.

Figure 13.3-2 further indicates that the southern portion of the City has a lower percentage of non-white residents than the central and northern areas. Figure 13.3-3 shows more detail on how specific racial and ethnic groups are concentrated in Santa Clara. This map shows that residents that identify as Asian alone (not Hispanic/Latino) are the predominant group through most of northern, central, and southern Santa Clara with the exception of south east Santa Clara which is predominantly white alone (not Hispanic/Latino).

Central Santa Clara, has a mix of mostly Asian/Pacific Islander, White, and Hispanic/Latino residents. Upon closer analysis, census tract 5052.02 has a disproportionate number of Hispanic/Latino residents (25% Hispanic/Latino residents compared to the citywide proportion of only 17%). The area is 38.6% Asian/Pacific Islander but the citywide proportion for those groups combined is 44%. This suggests a need to conduct outreach in Spanish as well as other languages. .

FIGURE 13.3-2: RACIAL DEMOGRAPHICS OF SANTA CLARA (2021)

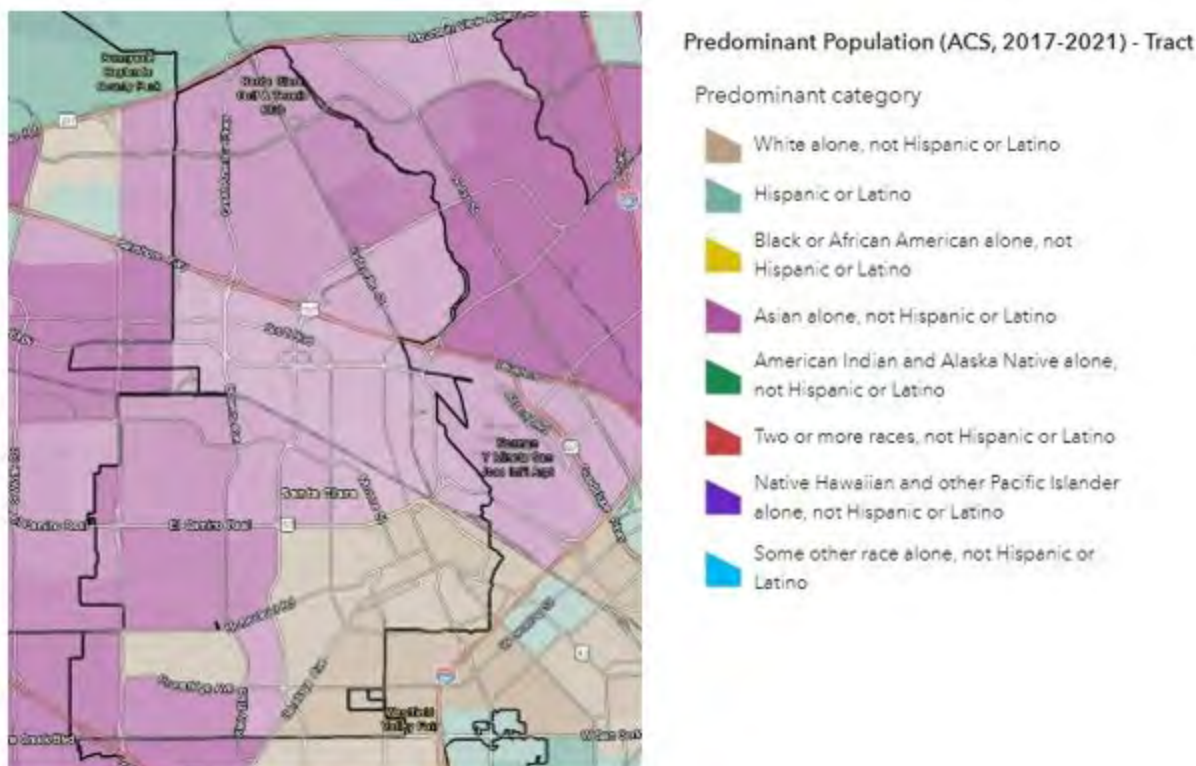

FIGURE 13.3-3: PREDOMINANT POPULATION OF SANTA CLARA (2017-2021)

Source: HCD AFFH 2.0 Data Viewer (May 2023).

Note: The intensity of the color corresponds with the percentage of the predominant population compared to the total population of the Census Tract (i.e., darker colors represent a greater percentage).

Overall, according to the 2022 ABAG isolation interactive maps and reports, racial isolation in the City is low for White, Hispanic or Latino, and non-Hispanic and Black or African American populations, and high for Asian or Pacific Islander segments (Table 13.3-7).

Table 13.3-7: Racial Isolation Index Values for Segregation within Santa Clara

Race	Santa Clara		
	2000	2010	2020
Asian/Pacific Islander	34.0	43.4	50.4
White	51.8	40.1	30.9
Hispanic/Latino	18.5	23.2	20.4
Black/African American	2.4	2.7	2.5

Source(s): IPUMS National Historical Geographic Information System (NHGIS). U.S. Census Bureau, 2020 Census State Redistricting Data (Public Law 94-171) Summary File, 2020 Census of Population and Housing, Table P002. Data from 2010 is from U.S. Census Bureau, Census 2010, Table P4. Data for 2000 is standardized to 2010 census tract geographies and is from U.S. Census Bureau, Census 2000, Table P004.

Another approach to measuring segregation employs the Divergence Index, which measures the difference between the overall population of a group in a region and the proportion of each group in a local area within that region. The Divergence Index provides a single measure of segregation for multiple racial groups. This index ranges between 0 (no segregation) to 1 (complete segregation) with low segregation (less than approximately 0.11), high segregation (above approximately 0.21), with moderate segregation levels in between.

According to a November 18, 2020 report (updated in October 11, 2021) by the Othering and Belonging Institute at UC Berkeley, the City of Santa Clara, with an inter-municipal divergence index score of 0.0592, is one of the most diverse and integrated cities in the Bay Area.

Table 13.3-8 shows the Divergence Index scores for cities/towns in Santa Clara County and their corresponding level of segregation.

Table 13.3-8: Divergence Index Scores within Santa Clara County

<i>Cities/Towns</i>	<i>Inter-Municipal Divergence</i>	<i>Level of Segregation</i>
Mountain View	0.0249	Low
Campbell	0.0467	Low
Santa Clara	0.0592	Low
San Jose	0.0676	Low
Sunnyvale	0.0923	Low
Morgan Hill	0.1054	Low
Palo Alto	0.1551	Moderate
Los Altos	0.2453	High
Saratoga	0.2573	High
Los Altos Hills	0.2632	High
Los Gatos	0.2673	High
Monte Sereno	0.2919	High
Gilroy	0.3196	High
Milpitas	0.3645	High
Cupertino	0.4294	High

Source: "The Most Segregated (and Integrated) Cities in the SF Bay Area". The Othering and Belonging Institute UC Berkeley. November 18, 2020 (updated October 11, 2021).

Central Santa Clara has higher areas of low to moderate income levels (LMI) (Figure 13.3-12). Central Santa Clara overlaps with LMI levels of 50 to 75 percent. There is a census tract in northern Santa Clara where LMI levels are between 75 to 100 percent. Central Santa Clara also overlaps with lower household incomes (\$87,000) compared to the rest of the city (Figure 13.3-20). These lower incomes likely contribute to the higher rates of overpayment by renters in central Santa

SANTA CLARA HOUSING ELEMENT

Clara (40 to 60 percent) (Figure 13.3-40). Central Santa Clara is also identified as a low resource area using the TCAC scoring system (Figure 13.3-22) which considers economic, educational, and environmental factors. Lastly, CalEnviroScreen scores in Central Santa Clara are between 50 to 74 percent which indicate less healthy conditions (Figure 13.3-36).

Historic Context

Although the City of Santa Clara is a racially diverse community with relatively low levels of segregation, there are only small numbers of African American residents, both in the City of Santa Clara and in the county as a whole. This is a result of systemic racism in private lending practices, federal loan guarantees, and local zoning and infrastructure decisions in the postwar years, as documented in the book, “The Color of Law” by Richard Rothstein. Among other examples, the book documents the efforts of Ford workers and their union to get housing built for African American workers at the Milpitas Ford Plant in the 1950s.

After the Ford workers discovered that no Milpitas-area developers would sell homes to African Americans, they enlisted the help of a Quaker service group devoted to racial equity who helped find a willing lender to fund an integrated subdivision in unincorporated Mountain View, and is described in the excerpt from Rothstein’s book below:

“But when the builder's intent to sell both to blacks and whites became known, the Santa Clara Board of Supervisors rezoned the site from residential to industrial use. When he found a second plot, Mountain View officials told him that they would never grant the necessary approvals. He next identified a third tract of land in another town near the Ford plant; when officials discovered that the project would not be segregated, the town adopted a new zoning law increasing the minimum lot size from 6,000 to 8,000 square feet, making the project unfeasible for working class buyers. After he attempted to develop a fourth site on which he had an option, the seller of the land canceled the option upon learning that the project would be integrated. At that point, the builder gave up.”
(The Color of Law, p. 117)

The effects of those discriminatory practices and decisions linger on, both in Milpitas, and in Santa Clara County generally. Additionally, Rothstein continues to describe that “Milpitas is no longer all white - it now has many Hispanic and Asian families - but the effects of its earlier segregation remain visible: African Americans make up only 2 percent of the population.” (The Color of Law, p. 121)

The City of Santa Clara has a similar history in the sense that today’s Santa Clara is well-integrated and does not include a majority of any race or ethnicity. However, during the 1960 census, when the City’s population exploded to 58,800, up from 11,702 in 1950, the City gained less than a thousand non-white residents, and remained 98% white. The City, which was

originally focused around downtown, Santa Clara University and the train station, initially added housing after World War II to the south of downtown. This was during the time that racial covenants and discriminatory lending practices were in full effect. Those neighborhoods south of downtown still have a significantly higher proportion of white residents (likely original purchasers of housing or their children) than other parts of Santa Clara.

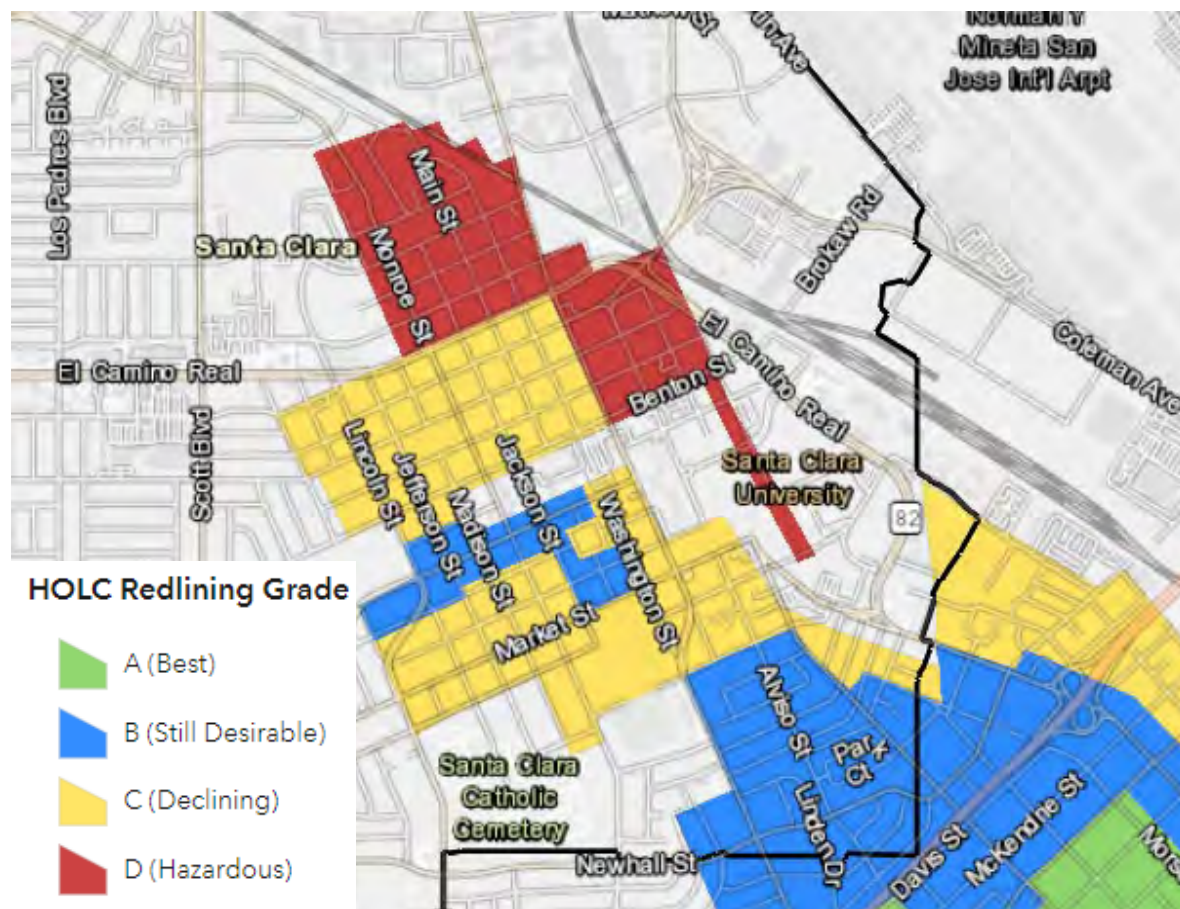

More recently developed neighborhoods have been added to the north of Highway 101 and are more reflective of the City's diversity.

In the 1930s and 1940s, a federal agency called the Home Owners' Loan Corporation (HOLC), created maps of nearly 250 American cities, grading neighborhoods on a scale of A (Best) to D (Hazardous) for purposes of providing loan officers, appraisers, and real estate professionals with a tool for evaluating mortgage lending risk. Neighborhoods of color were far more likely to receive D or C grades with A or B grades reserved for white neighborhoods. Neighborhoods with a D (Hazardous) grade were often "redlined" by lending institutions, denying them access to credit, particularly mortgages.

The following figure shows HOLC redlining grades from 1937 indicating that portions of Santa Clara's Old Quad neighborhood to the north and south of El Camino Real were assigned either "(D) Hazardous" or "(C) Declining" grades.

FIGURE 13.3-4: HOLC REDLINING MAP (1937)

Source: HCD AFFH 2.0 Data Viewer HOLC Redlining Grade (University of Richmond, 2021)

Many of the same blocks that were categorized as declining or hazardous in 1937 have elevated levels of low and moderate income (LMI) households today as shown later in this chapter in Figure 13.3-12.

Persons with Disabilities

In 1988, Congress added protections against housing discrimination for persons with disabilities through the FHA, which protects against intentional discrimination and unjustified policies and practices with disproportionate effects. The FHA also includes the following unique provisions to persons with disabilities: (1) prohibits the denial of requests for reasonable accommodations for persons with disabilities, if necessary, to afford an individual equal opportunity to use and enjoy a dwelling; and (2) prohibits the denial of reasonable modification requests. With regards to fair housing, persons with disabilities have special housing needs because of the lack of accessible and affordable housing, and the higher health costs associated with their disability. In addition, many may be on fixed incomes that further limit their housing options.

Regional Trends

According to the 2015-2019 American Community Survey (ACS) 5-year estimates, 154,212 residents (eight percent of Santa Clara County's population) report having one of six disability types listed in the ACS (hearing, cognitive, ambulatory, self-care, and independent living). The percentage of residents detailed by disability are listed in Table 13.3-9. In both Santa Clara County and the City of Santa Clara, the percentage of individuals with disabilities increases with age, with the highest percentage of individuals being those 75 years or older.

In Santa Clara, seven percent of the population experiences a disability. This rate is slightly lower than that of the County. The disability rate is highest among residents who identify as White (not Hispanic or Latino) (11.4 percent) and Hispanic or Latino (of any race) (7.7 percent). In the County, the highest percentage of disabled residents by race is among American Indian and Alaska Native residents (14.4 percent) and Black or African American residents (10.7 percent). In Santa Clara, the most common disability is an ambulatory difficulty (3.6 percent) followed by an independent living difficulty (3.3 percent). In the County the same trend follows, the most common disability is those with an independent living difficulty (4.5 percent) followed by an ambulatory difficulty (4.4 percent)

Table 13.3-9: Populations of Persons with Disabilities– Santa Clara County & Santa Clara

Source(s): 2019 ACS 5-year Estimates, Table S1810

In terms of geographic dispersal, there is a patchwork pattern of persons with a disability throughout the County. There does appear to be a concentration of persons with disabilities within San Jose and expanding out to Santa Clara and Campbell. These areas of concentration have percentages of the population experiencing disabilities at 10 to 20 percent. The cities of Milpitas, Sunnyvale, Mountain View, and Palo Alto appear to have fewer tracts where residents experience disabilities above 10 percent. Nowhere in the County does the percentage of residents experiencing a disability exceed 20 percent.

FIGURE 13.3-5: REGIONAL POPULATIONS OF PERSONS WITH DISABILITIES BY TRACT (2019)

Local Trends

Within Santa Clara there is a concentration of residents with a disability between 10 to 20 percent in the central part of the city. In the northern part of the city fewer than 10 percent of residents experience a disability. In the southern part of the city there are concentrations where the percentage of residents experiencing a disability rises above 10 percent. The higher rates of poverty in central Santa Clara overlap with higher rates of Low to Moderate Income populations (50 to 75 percent) (Figure 13.3-12). This low rate of residents with disabilities may be explained in part by the young age of Santa Clara residents. According to 2019 ACS data, only 11.4 percent of residents in Santa Clara are 65 and above while 50 percent of residents are between 15 and 44 years old. Comparing rates to the nearby cities of Mountain View, Sunnyvale, and Milpitas these cities have fewer geographic areas where the population experiencing a disability is between 10 to 20 percent.

SANTA CLARA HOUSING ELEMENT

FIGURE 13.3-6: PERCENT OF POPULATION WITH A DISABILITY – SANTA CLARA (2021)

The California Department of Developmental Services is responsible for overseeing the coordination and delivery of services to more than 330,000 Californians with developmental disabilities including cerebral palsy, intellectual disability, Down syndrome, autism, epilepsy, and related conditions. The tables below show the population in Santa Clara County and Santa Clara with developmental disabilities by age (Table 13.3-10) and the population of adults with developmental disabilities by residence (Table 13.3-11).

Table 13.3-10: Population with Developmental Disabilities by Age

Age Group	Santa Clara County	Santa Clara
Under 18	4,016 (37%)	204 (33%)
18 and Older	6,737 (63%)	408 (67%)
Total	10,753	612

Total	6,737	408

*Source: County-California Department of Developmental Services, Consumer Count by ZIP Code and Residence Type (2020)
Santa Clara-San Andreas Regional Center (November 2021).*

Approximately 67 percent of Santa Clara's population with developmental disabilities are adults.

Throughout Santa Clara County, according to California Department of Development Services estimates, there has been a 20 percent increase in the adult population with developmental disabilities between 2015-2021. For that same timeframe, the number of Santa Clara County residents with development disabilities age 62 and older grew by 35 percent.

The preferred living option for children with developmental disabilities continues to be the family home, but as those children become adults, additional residential options outside the family home will be required.

In summary, Santa Clara has a slightly lower percentage of persons with disability compared with the County. The racial and ethnic groups with the highest percentage of disability in Santa Clara are white (not Hispanic or Latino) and Hispanic/Latino. There are higher concentrations of persons with disabilities living in Central Santa Clara and selected areas in Southern Santa Clara. There is likely a need to create more supportive and accessible multifamily housing opportunities for this subpopulation as the development of single-story homes is less likely given the limited supply and high cost of land.

Familial Status

Under the Fair Housing Act, housing providers may not discriminate because of familial status. Familial status covers the presence of children under the age of 18, pregnant persons, and any person in the process of securing legal custody of a minor child (including adoptive or foster parents). Examples of familial status discrimination include refusing to rent to families with children, evicting families once a child joins the family (through, e.g., birth, adoption, custody), or requiring families with children to live on specific floors or in specific buildings or areas. Single parent households are also protected by fair housing law.

Families with children often have special housing needs due to lower per capita income, the need for affordable childcare, the need for affordable housing, or the need for larger units with three or more bedrooms. Single parent households are also protected by fair housing law. Female-headed households are of particular consideration as they may experience greater housing affordability challenges due to typically lower household incomes compared to two-parent

SANTA CLARA HOUSING ELEMENT

households. Often, sex and familial status intersect to compound the discrimination faced by single mothers.

Regional Trends

In Santa Clara County, 27 percent of households have children under the age of 18. Within the County, the cities of Sunnyvale, Palo Alto, and San Jose have the highest percentages of households with children (28.6, 27.1, and 26.2 percent, respectively). Across all the cities listed below in Santa Clara County, there are higher percentages of single-parent female households than single-parent male households. Within the County, Palo Alto and San Jose have the highest percentages of single-parent female households (both 3.8 percent). While single-parent male households have a lower percentage overall, the cities of Palo Alto, San Jose, and Santa Clara have the highest percentages of single-parent male households (1.8, 1.2, and 1.2 percent respectively).

Table 13.3-12: Households with Children in Santa Clara County and Incorporated Cities

	<i>Santa Clara County</i>	<i>Santa Clara</i>	<i>San Jose</i>	<i>Sunnyvale</i>	<i>Palo Alto</i>	<i>Mountain View</i>
Married Couple with Children	27%	26.1%	26.2%	28.6%	27.1%	20.9%
Single-Parent, Male	1.1%	1.2%	1.2%	0.8%	1.8%	0.9%
Single-Parent, Female	3.3%	2.2%	3.8%	1.8%	3.8%	2.7%

Source(s): American Community Survey, 2015-2019 (5-Year Estimates), Table DP02

Figure 13.3-7 visualizes the variety of percentages of children in Santa Clara County living in married-couple households. San Jose has the largest variety with some areas showing below 20 percent of married-couple households with children and other areas showing above 80 percent of married-couple households with children. This lower percentage is concentrated around central San Jose and gets higher as the map moves out. Cities like Palo Alto, Los Altos, Cupertino, and Saratoga along the western part of the County show some of the highest rates of married-couple households with children. Gilroy is another area showing low rates of married-couple households with children (between 21 to 40 percent).

FIGURE 13.3-7: REGIONAL PERCENTAGE OF CHILDREN IN MARRIED-COUPLE HOUSEHOLDS BY TRACTS (2019)

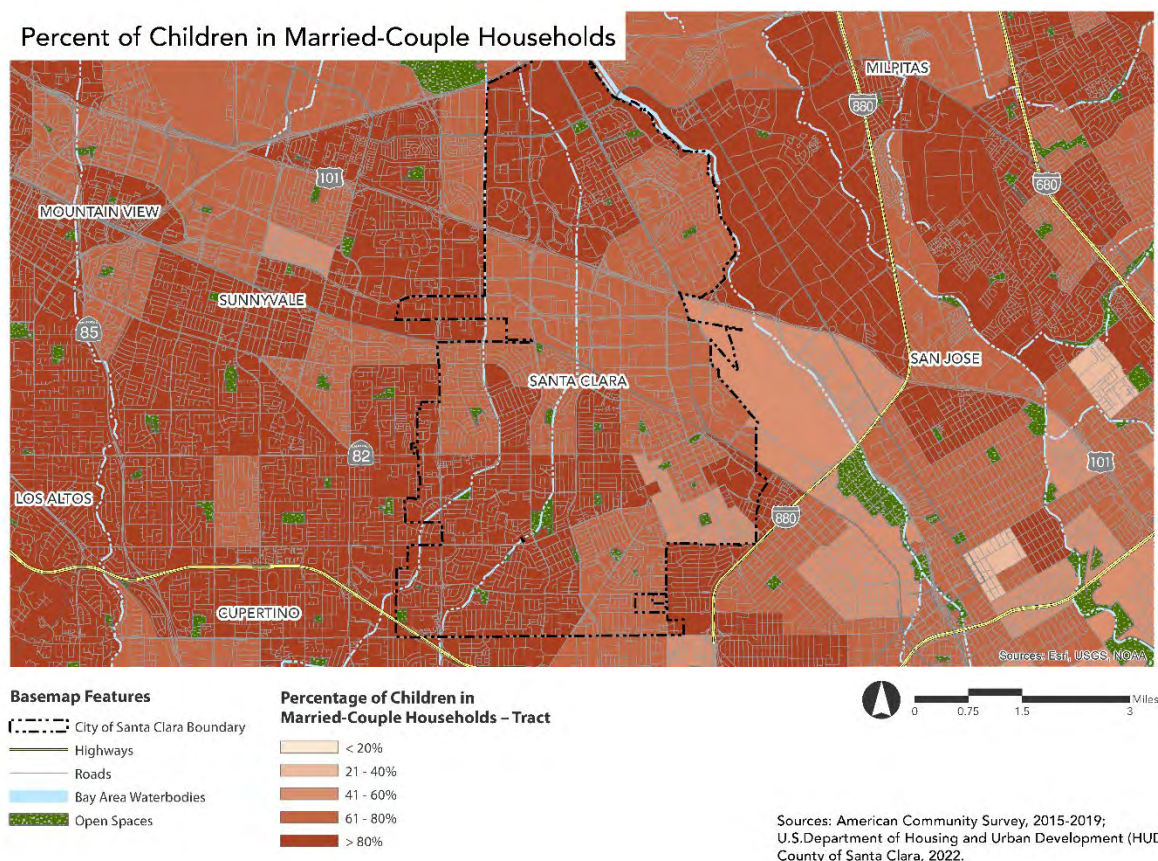

Local Trends

The northern and southern parts of Santa Clara have higher rates of married couple households (between 61 to 80 percent). The central part of Santa Clara has a lower rate of married couple households at 41 to 60 percent. Central Santa Clara also has higher rates of low to moderate income levels (50 to 75 percent), lower incomes (\$87,000) (Figure 13.3-12) and higher rates of overpayment (40 to 60 percent) (Figure 13.3-40) which may all be a factor of this lower rate of married couple and likely dual-income households. The nearby cities of Mountain View, Sunnyvale, and Milpitas have similar rates of married couple households.

SANTA CLARA HOUSING ELEMENT

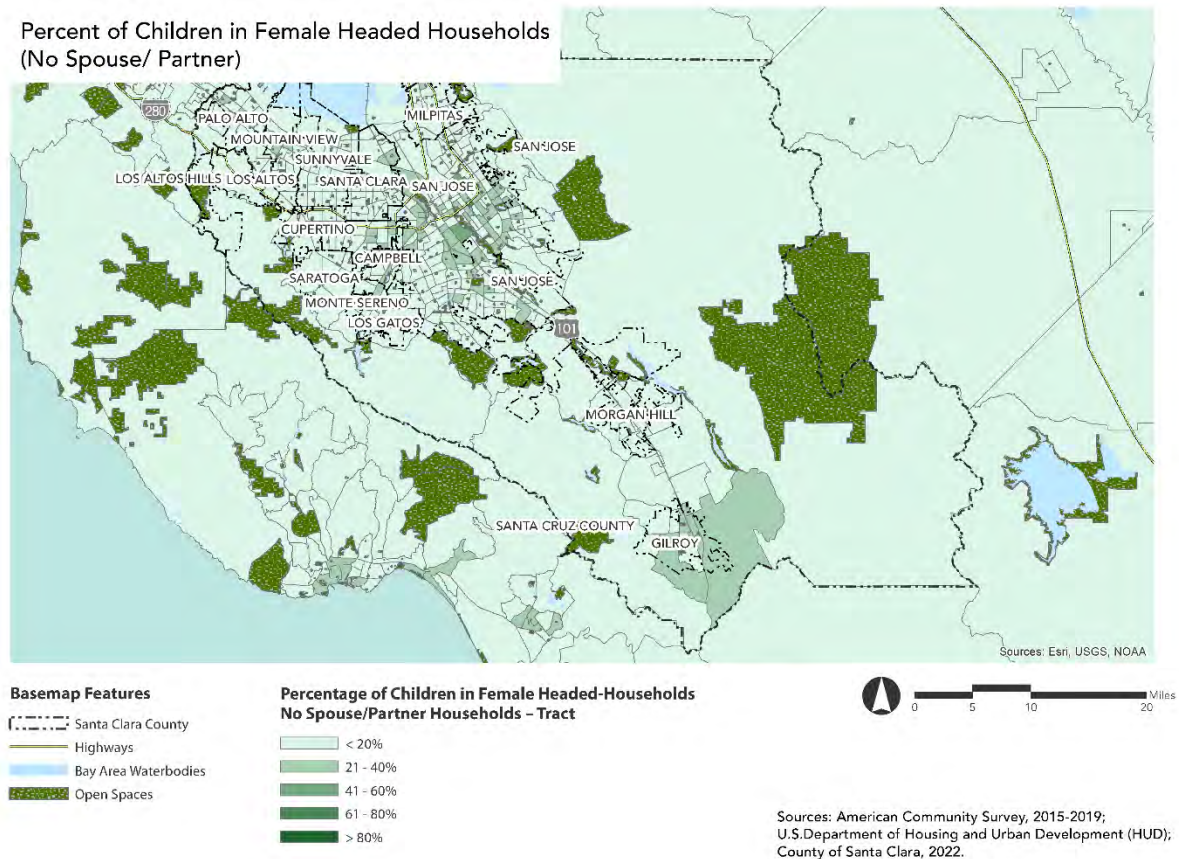

**FIGURE 13.3-8: PERCENT OF CHILDREN IN MARRIED-COUPLE HOUSEHOLDS
– SANTA CLARA (2021)**

Regional Trends

Much of Santa Clara County shows rates of children in female-headed households below 21 to 40 percent. In San Jose there are areas where this percentage rises to 41 to 60 percent. Most cities in the County have some areas where the rate is between 21 to 40 percent, however, some cities along the western part of the County like Los Altos, Cupertino, and Saratoga appear to have rates below 20 percent for the entire city. San Jose, which has the highest concentration of single mother households also has higher rates of non-White populations (61 to 80 percent).

FIGURE 13.3-9: REGIONAL PERCENT OF CHILDREN IN FEMALE-HEADED HOUSEHOLDS BY TRACT (2019)

Local Trends

The majority of Santa Clara has below 20 percent of female headed households with children. There is one small section in northeast Santa Clara where this percentage rises to 21 to 40 percent. This area also overlaps with higher rates of HCV use (5 to 15 percent), higher rates of overpayment by renters (40 to 60 percent), and higher rates of household overcrowding (above 15 percent) (Figure 13.3-40). These trends may be explained in part by the higher rate of female headed households which may only be single income households. The nearby cities of Mountain View and Milpitas have rates below 20 percent for female headed households, and Mountain View has a small section where this rate rises between 21 to 40 percent, similar to Santa Clara.

SANTA CLARA HOUSING ELEMENT

FIGURE 13.3-10: PERCENT OF CHILDREN IN FEMALE HEADED HOUSEHOLDS – SANTA CLARA (2021)

In summary, Santa Clara has a higher percentage of single parent female parent households compared with single parent male households. Most of Santa Clara has rates of female headed households with children that are below 20% which is consistent with the rest of the County. The central portion of the City has lower rates of married couples with children. Single parent households generally have lower income which suggests a need to build a variety of affordable unit sizes for singles, couples, single parents with children, and couples with children.

Income Level

Each year, the HUD receives custom tabulations of American Community Survey (ACS) data from the U.S. Census Bureau. Known as the "CHAS" data (Comprehensive Housing Affordability Strategy), it demonstrates the number of households in need of housing assistance by estimating the number of households that have certain housing problems and have incomes low enough to qualify for HUD's programs (primarily 30, 50, and 80 percent of median income). HUD defines a Low to Moderate Income (LMI) area as a census tract or block group where over 51 percent of the population is LMI (based on HUD income definition of up to 80 percent of the Area Median Income).

Regional Trends

Table 13.3-13 lists Santa Clara County households by income category and tenure. Based on the above definition, 33.5 percent of Santa Clara County households are considered LMI, as they earn less than 80 percent of the HUD Area Median Family Income (HAMFI). About 45 percent of all renter households are considered LMI, compared to about 23 percent of owner households. In Santa Clara, about 32 percent of all households are considered LMI. Similar to the County, more renter households in the city are LMI (37.5 percent) than owner households (24 percent). Overall, Santa Clara has a slightly larger percentage of owner and renter households earning above the median area income (60.2 percent) compared to the County (58 percent).

Table 13.3-13: Santa Clara County & Santa Clara Households by Income Category and Tenure

Source(s): HUD CHAS (based on 2014-2018 ACS), 2020.

Figure 13.3-12 shows the LMI areas in Santa Clara County by block group. There are drastic geographic differences in the percentage of LMI populations. The largest concentration of LMI populations is in City of San Jose, where the percentage rises to 50 to 75 percent, and 75 to 100 percent. There are also a few concentrations in Palo Alto, Santa Clara, Campbell, and Gilroy where the LMI population is between 75 to 100 percent. In general, the cities to the west and south of San Jose have lower percentages of LMI populations. This higher LMI percentage in San Jose and the western part of the County may be explained in part by the higher percentages of non-White populations in this area, ranging between 61 to 80 percent, as these populations are more likely to be economically disadvantaged and have lower incomes.

SANTA CLARA HOUSING ELEMENT

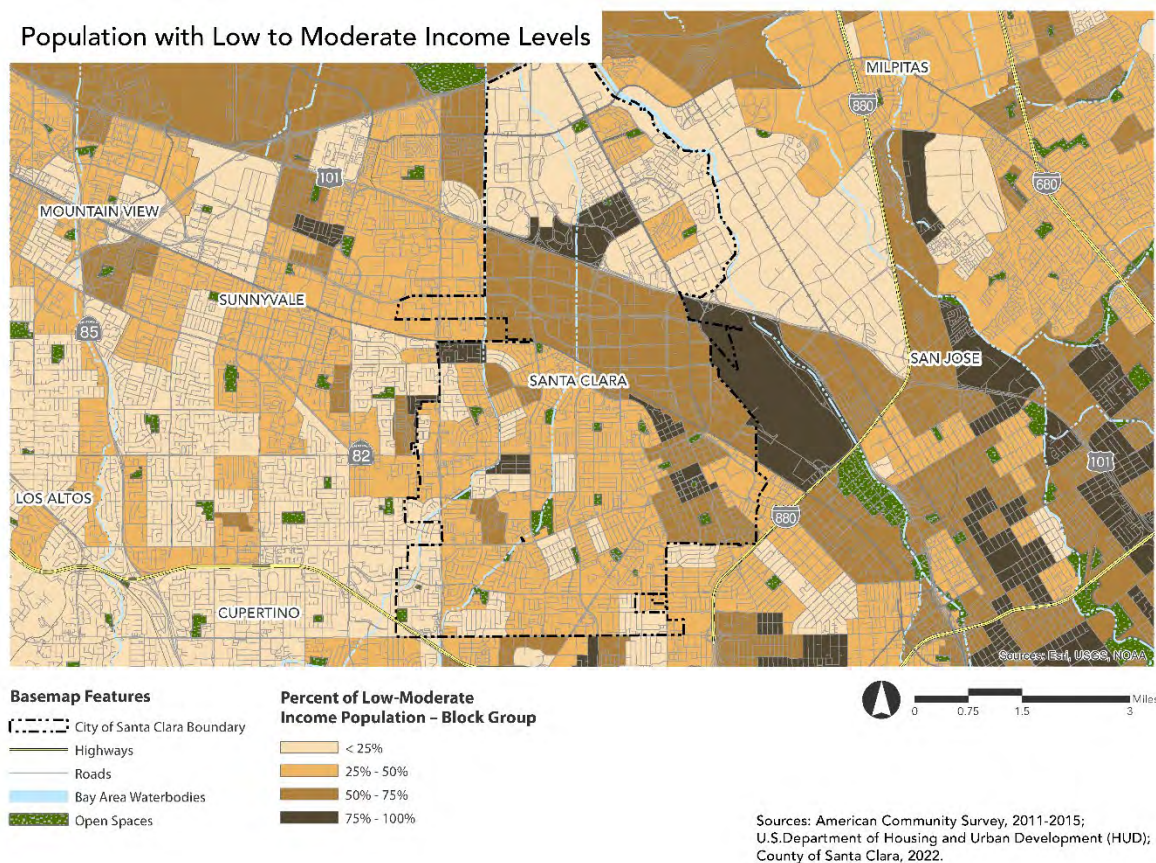

FIGURE 13.3-11: REGIONAL CONCENTRATIONS OF LMI HOUSEHOLDS BY TRACT (2015)

Local Trends

In Santa Clara there are a few concentrations where the LMI populations are between 75 to 100 percent and a large area where the LMI percentage is between 50 to 75 percent. The rest of the city has block groups with LMI populations between 25 to 50 percent and below 25 percent. The largest LMI concentration between 75 to 100 percent is in the northern part of the city, where these block groups overlap with higher percentages of non-White population block groups (61 to 80 percent) and overcrowded households (12 percent). The large area of LMI population between 50 to 75 percent overlaps with block groups that have higher non-White populations (61 to 80 percent), lower median incomes (below \$87,000), and higher rates of overpayment by renters (40 to 60 percent). All three of these factors may provide an explanation for the higher rate of LMI populations in central Santa Clara. Additionally, this area is between Highway 101 and the Union Pacific Railroad and is predominantly industrial, likely contributing to the higher LMI rates. Compared to the nearby cities of Mountain View, Sunnyvale, and Milpitas, Santa Clara has larger geographic areas with higher percentages of LMI populations.

FIGURE 13.3-12: POPULATION WITH LOW TO MODERATE INCOME LEVELS – SANTA CLARA (2021)

Housing Choice Vouchers

Housing Choice Vouchers (HCVs), a form of HUD rental subsidies, are issued to low-income households that promise to pay a certain amount of the household's rent. Prices, or payment standards, are set based on the rent in the metropolitan area, and voucher households must pay any difference between the rent and the voucher amount. Participants of the HCV program are free to choose any rental housing that meets program requirements.

An analysis of the trends in HCV concentration can be useful in examining the success of the program in improving the living conditions and quality of life of its holders. One of the objectives of the HCV program is to encourage participants to avoid high-poverty neighborhoods and encourage the recruitment of landlords with rental properties in low poverty neighborhoods. HCV programs are managed by Public Housing Agencies (PHAs), and the programs assessment structure (SEMAPS) includes an "expanding housing opportunities" indicator that shows whether the PHA has adopted and implemented a written policy to encourage participation by owners of units located outside areas of poverty or minority concentration.

SANTA CLARA HOUSING ELEMENT

A study prepared by HUD's Development Office of Policy Development and Research found a positive association between the HCV share of occupied housing and neighborhood poverty concentration and a negative association between rent and neighborhood poverty¹. This means that HCV use was concentrated in areas of high poverty where rents tend to be lower. In areas where these patterns occur, the program has not succeeded in moving holders out of areas of poverty.

Regional Trends

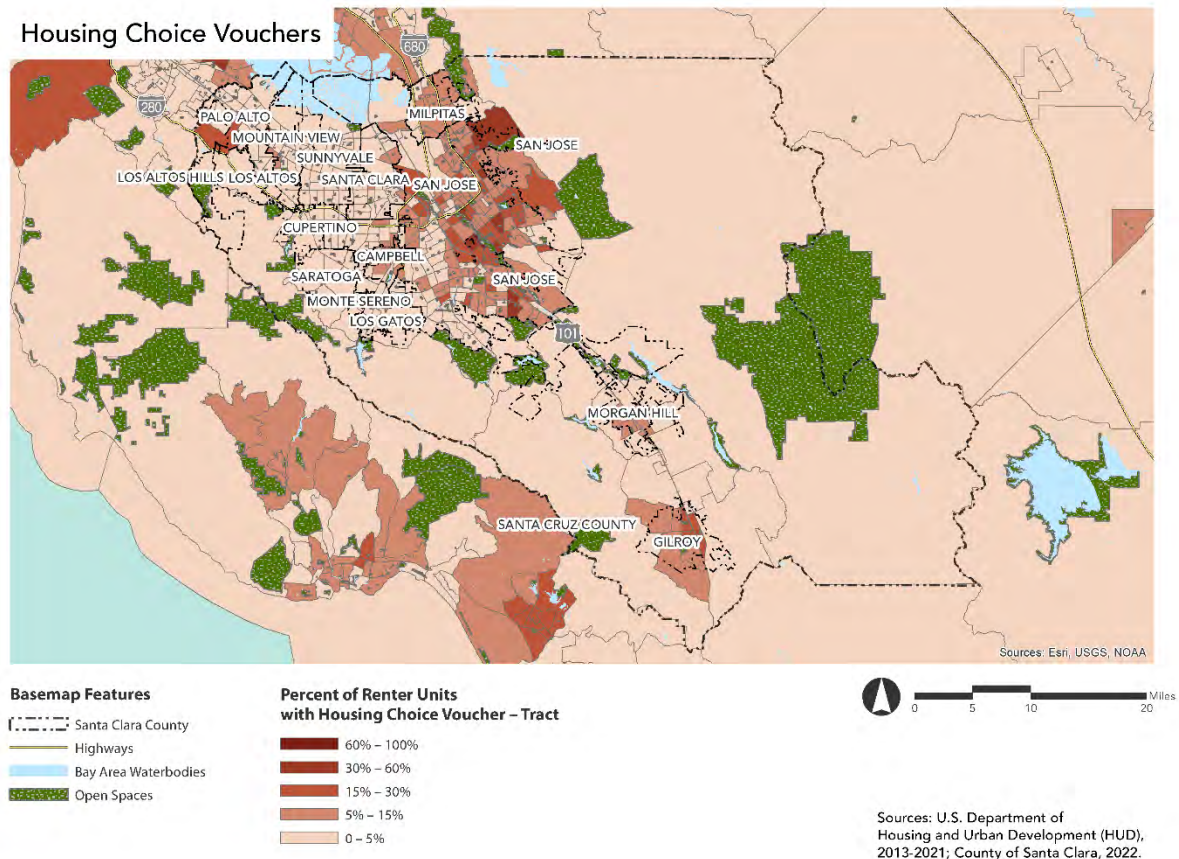

Santa Clara County Housing Authority (SCCHA) provides about 17,000 participants with housing choice vouchers, making it their largest rental assistance program. SCCHA housing choice voucher holders pay 30 percent of their monthly income toward rent. Voucher holders in the "Moving to work" program pay 32 percent of their monthly income towards rent (or a minimum of \$50, whichever is higher). SCCHA pays the balance of the rent to the landlords on behalf of the household.

In the County, the cities of Santa Clara, Cupertino, Mountain View, Palo Alto, and Sunnyvale, the vast majority of Project-Based Section 8 units are 0-1 bedrooms. SCHHA generally has a very long waiting list and the average wait for a household to receive an HCV is between eight to 10 years.

HCV concentration is highest in the eastern part of Santa Clara County in the cities of San Jose, Campbell, and Milpitas. As identified earlier, these areas of the County have higher percentages of non-White populations. HCV use in these areas is between five to 15 percent, 15 to 30 percent, and 30 to 60 percent. Palo Alto, Mountain View, Santa Clara, Morgan Hill, and Gilroy also show lower percentages for HCV use while the rest of the County has rates below five percent.

¹ Devine, D.J., Gray, R.W., Rubin, L., & Taghavi, L.B. (2003). *Housing choice voucher location patterns: Implications for participant and neighborhood welfare*. Prepared for the U.S. Department of Housing and Urban Development, Office of Policy Development and Research, Division of Program Monitoring and Research.

FIGURE 13.3-13: REGIONAL HOUSING HCV CONCENTRATION BY TRACT (2021)

Local Trends

In Santa Clara there are 650 tenant-based vouchers in use and 129 project-based vouchers. There are three concentrations of tracts with HCV use between five to 15 percent while the rest of the City's HCV use is below five percent. There are concentrations of higher HCV use in the northern and southern part of the city. The higher HCV concentration in northern Santa Clara overlaps with the only area in the City with higher rates of female headed households (21 to 40 percent), as well as higher rates of overpayment by renters (40 to 60 percent), and higher rates of overcrowded households (above 15 percent). The areas of higher HCV use in the southern part of the City overlaps with higher rates of LMI households (25 to 50 percent) and higher rates of overpayment by renters (40 to 60 percent).

The northern part of Santa Clara has tracts with median gross rents of \$2,500. The southern part of the City has a mix of rents between \$1,000 and above \$3,000. Central Santa Clara has an average median rent below \$1,000. This area is more affordable than the rest of the city and households in this area have lower median incomes (\$87,000) than the rest of the City. Santa Clara has similar rates of affordability compared to Sunnyvale, Mountain View, and Milpitas.

SANTA CLARA HOUSING ELEMENT

FIGURE 13.3-14: HOUSING CHOICE VOUCHERS – SANTA CLARA (2021)

AFFORDABILITY BY CENSUS TRACT Regional Trends

Figure 13.3-15 shows the Location Affordability Index in Santa Clara County. The index was developed by HUD in collaboration with the Department of Transportation under the federal Partnership for Sustainable Communities. One objective of the partnership is to increase public access to data on housing, transportation, and land use. Before this index was established, there was no standardized national data source on household transportation expenses, which limited the ability of homebuyers and renters to fully account for the cost of living in a particular city or neighborhood.

The prevailing standard of affordability in the United States is paying 30 percent or less of a household's income on housing. However, this prevailing standard fails to account for transportation costs, and transportation costs have grown significantly as a proportion of household income since the standard was established. According to the Bureau of Labor Statistics, in the 1930s, American households spent just eight percent of their income on transportation. Since then, as a substantial proportion of the U.S. population has migrated from center cities to surrounding suburbs and exurbs and has come to rely more heavily (or exclusively) on cars, that percentage has steadily increased, peaking at 19.1 percent in 2003. As of

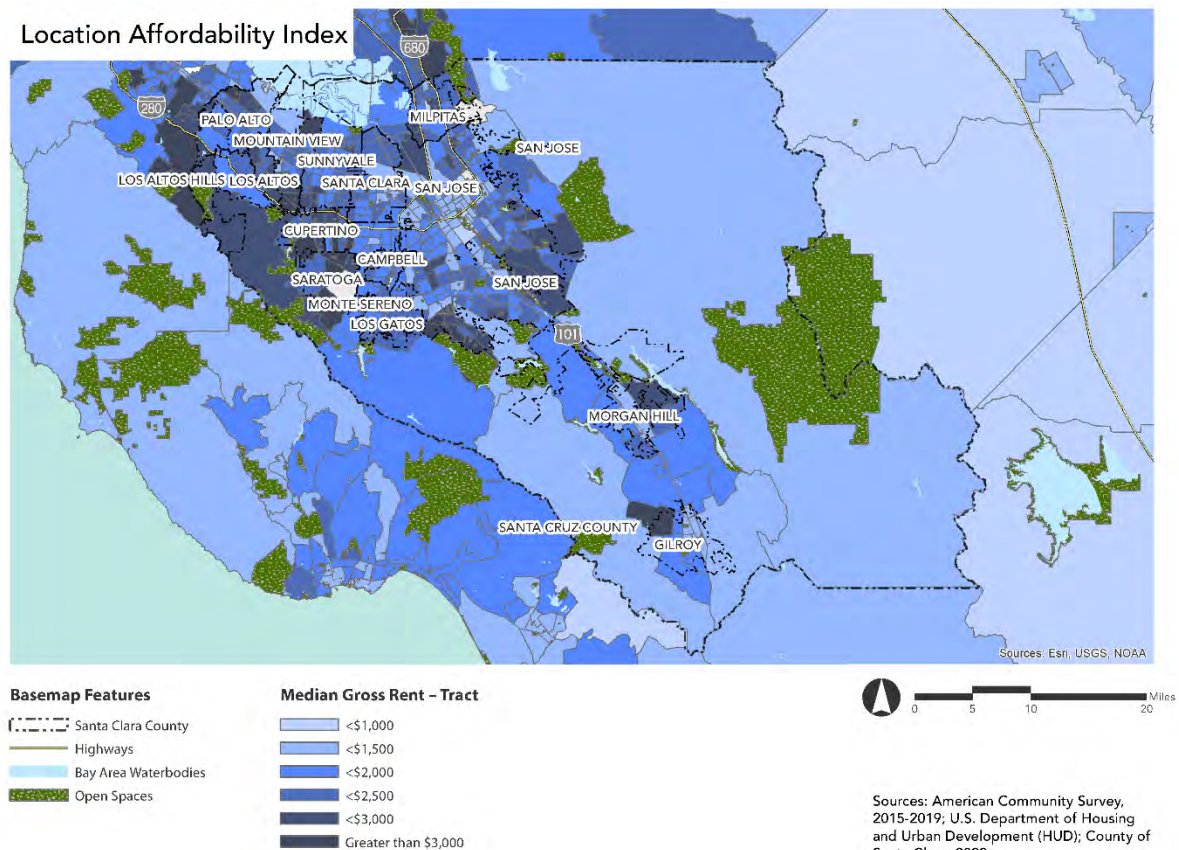

2020, households spent on average about 17.4 percent of their annual income on transportation, second only to housing costs in terms of budget impact.² And for many working-class and rural households, transportation costs exceed housing costs.

In Santa Clara County, there is a mix of median gross rents. San Jose has areas with the lowest rents below \$1,000 and areas with higher rents above \$3,000. Most cities have a mix of rents between \$2,000 to \$3,000 and above. The most affordable tracts are in San Jose while the more expensive tracts are around the perimeter of the County in cities like Palo Alto, Los Altos, Cupertino, Los Gatos, and east San Jose.

Local Trends

Figure 13.3-16 shows that median gross rents are highest in Northern Santa Clara and parts of Southern Santa Clara. The lowest rents are found in and adjacent to Central Santa Clara.

FIGURE 13.3-15: REGIONAL MEDIAN GROSS RENT/ AFFORDABILITY INDEX BY TRACT (2021)

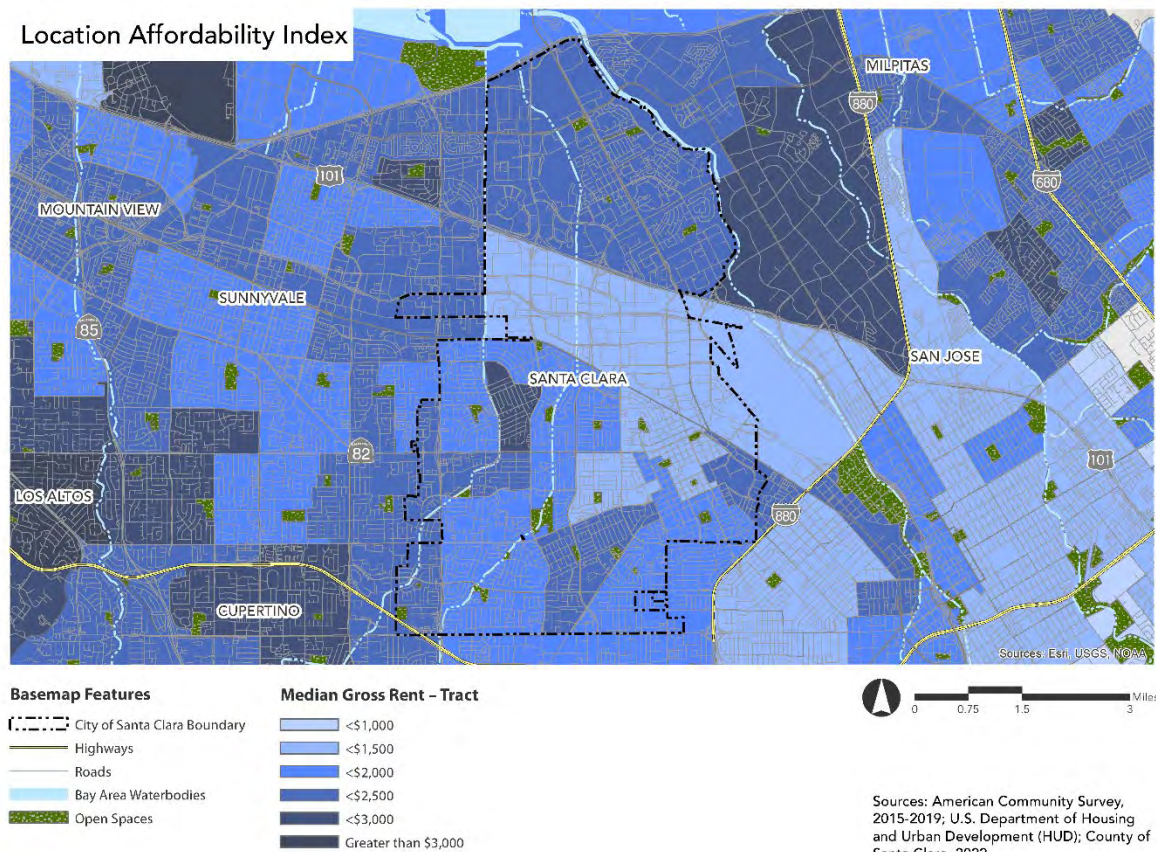

² U.S. Department of Transportation, Bureau of Transportation Statistics, <https://data.bts.gov/stories/s/ida7-k95k>, accessed 4/26/22.

SANTA CLARA HOUSING ELEMENT

FIGURE 13.3-16: LOCATION AFFORDABILITY INDEX – SANTA CLARA (2021)

Racially and Ethnically Concentrated Areas of Poverty (R/ECAP)

Racially and Ethnically Concentrated Areas of Poverty (R/ECAPs) are geographic areas with significant concentrations of poverty and minority populations. HUD developed a census-tract based definition of R/ECAP that relies on a racial and ethnic concentration threshold and a poverty test. The threshold states that an area with a non-White population of 50 percent or more would be identified as a R/ECAP; the poverty test defines areas of extreme poverty as areas where 40 percent or more of the population live below the federal poverty line or where the poverty rate is three times the average poverty rate for the metropolitan area (whichever is lower). Thus, an area that meets either the racial or ethnic concentration, and the poverty test would be classified as a R/ECAP. Identifying R/ECAPS facilitates an understanding of entrenched patterns of segregation and poverty due to the legacy effects of historically racist and discriminatory housing laws.

In Santa Clara County the only areas that meet the official definition of a R/ECAP are within San Jose and Gilroy.

Local Trends

There are no R/ECAP areas in Santa Clara nor in the nearby cities of Mountain View or Sunnyvale.

FIGURE 13.3-17: REGIONAL RACIALLY AND ETHNICALLY CONCENTRATED AREAS OF POVERTY “R/ECAPS” (2021)

SANTA CLARA HOUSING ELEMENT

FIGURE 13.3-18: RACIALLY OR ETHNICALLY CONCENTRATED AREAS OF POVERTY “R/ECAPS” – SANTA CLARA (2021)

Racially Concentrated Areas of Affluence (RCAs)

Racially Concentrated Areas of Affluence (RCAs) are defined by the HUD as communities with a large proportion of affluent and non-Hispanic White residents. According to a policy paper published by the HUD, non-Hispanic Whites are the most racially segregated group in the United States. In the same way neighborhood disadvantage is associated with concentrated poverty and high concentrations of people of color, distinct advantages are associated with residence in affluent, White communities. RCAs are currently not available for mapping on the AFFH Data Viewer. As such, an alternate definition of RCA from the University of Minnesota Humphrey School of Public Affairs is used in this analysis. RCAs are defined as census tracts where (1) 80 percent or more of the population is white, and (2) the median household income is \$125,000 or greater (slightly more than double the national median household income in 2016).

Regional Trends

Comparing Figure 13.3-1 and Figure 13.3-19 there are multiple areas where high White populations overlap with median incomes above \$125,000. These areas are mostly located along

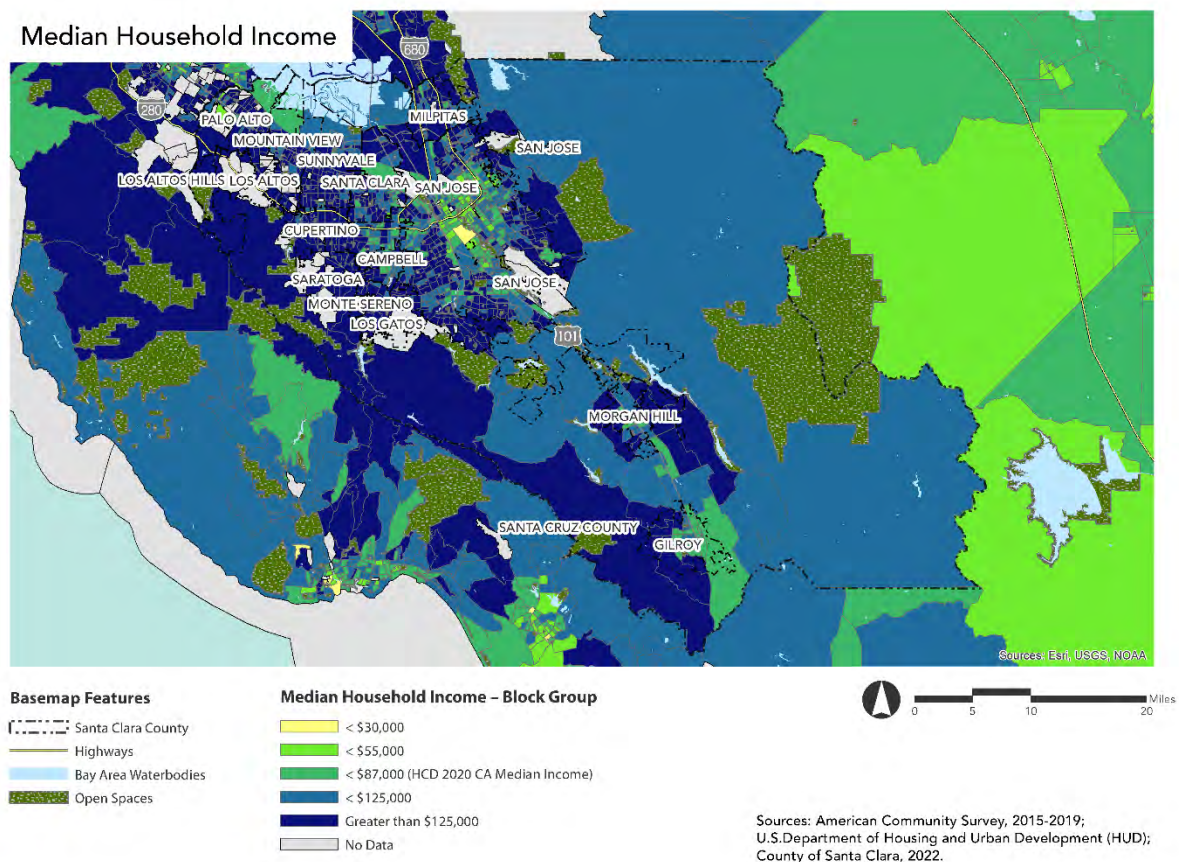

the eastern edge of the County. However, only one community qualifies as an RCAA. The unincorporated area called Lexington Hills located along the western edge of the County has a White population of 87.4 percent and a median household income of \$166,932, meeting the alternate definition of a RCAA. This unincorporated area of 4.7 square miles is home to approximately 2,500 residents.

Table 13.3-14: White Population and Median Household Income of RCAAs in Santa Clara County

City	White Population	Median Household Income (2019)
Lexington Hills	87.4%	\$166,932

Source(s): DataUSA.io (2019)

FIGURE 13.3-19: REGIONAL MEDIAN INCOME BY BLOCK GROUP (2021)

Local Trends

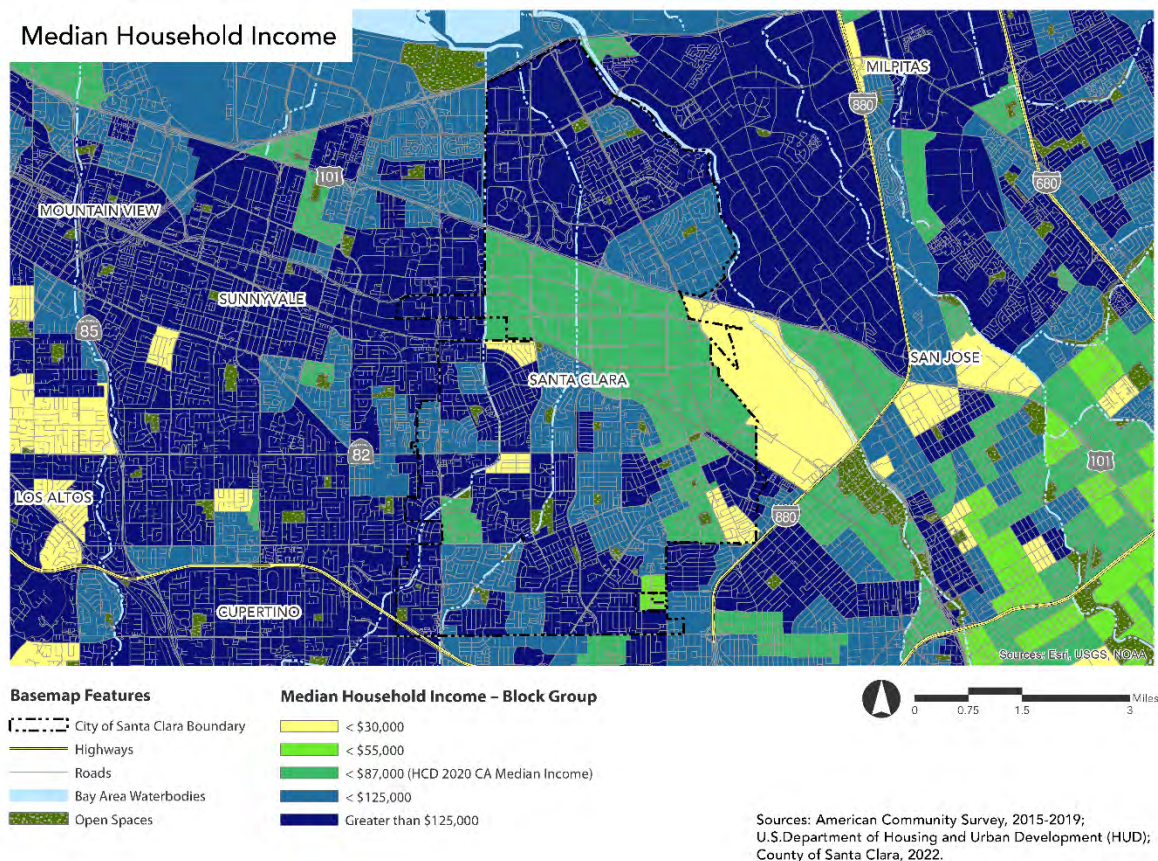

The northern part of Santa Clara has block groups that have households with a median income of \$125,000 and above. The southern part of the city has a smaller section of median household incomes at \$30,000, while most areas have incomes at \$125,000 and above. Notably, Central Santa

SANTA CLARA HOUSING ELEMENT

Clara has median household incomes at \$87,000 which is lower than the rest of the city but is the 2020 median income for California. The central part of Santa Clara also overlaps with higher rates of non-White populations, higher rates of residents with disabilities, and higher rates of overpayment for rent, all of which likely contribute to lower median incomes for households in this area. Mountain View, Sunnyvale, and Milpitas all have larger areas with higher household incomes and only a few small concentrations with lower median incomes.

FIGURE 13.3-20: MEDIAN INCOME – SANTA CLARA (2021)

In summary, Santa Clara has a lower percentage of low and moderate income (LMI) residents compared to the County, but there are several census blocks with higher concentrations of low income residents. These areas are located within or adjacent to Central Santa Clara. These small pockets of lower income residents suggest a need for proactive outreach to connect residents with new affordable housing opportunities as well as education about City services such as landlord tenant rights according to state laws as well as mediation services, home repair, and proactive code enforcement. Such outreach, education, and services could help increase mobility and improve living conditions in these areas.

Analysis above indicates that residents in Central Santa Clara include Asian/Pacific Islander, White, and Hispanic/Latino residents who are disproportionately overrepresented in this area. Proactive outreach in Central Santa Clara should be conducted in English, Spanish and other relevant languages to provide greater access to city programs and affordable housing opportunities throughout the City.

Access to Opportunities

Access to opportunity is a concept to approximate the link between place-based characteristics (e.g., education, employment, safety, and the environment) and critical life outcomes (e.g., health, wealth, and life expectancy). Ensuring access to opportunity means both improving the quality of life for residents of low-income communities, as well as supporting residents' mobility and access to 'high resource' neighborhoods.

TCAC Opportunity Maps

TCAC Maps are opportunity maps created by the California Fair Housing Task Force (a convening of the Department of Housing and Community Development (HCD) and the California Tax Credit Allocation Committee (TCAC)) to provide research and evidence-based policy recommendations to further HCD's fair housing goals of (1) avoiding further segregation and concentration of poverty and (2) encouraging access to opportunity through land use policy and affordable housing, program design, and implementation. These opportunity maps identify census tracts with highest to lowest resources, segregation, and poverty, which in turn inform the TCAC to distribute funding more equitably for affordable housing in areas with the highest opportunity through the Low-Income Housing Tax Credit (LIHTC) Program.

TCAC Opportunity Maps display areas by highest to lowest resources by assigning scores between 0–1 for each domain by census tracts where higher scores indicate higher "access" to the domain or higher "outcomes." Refer to Table 13.3-15 for a list of domains and indicators for opportunity maps. Composite scores are a combination score of the three domains that do not have a numerical value but rather rank census tracts by the level of resources (low, moderate, high, highest, and high poverty and segregation). The opportunity maps also include a measure or "filter" to identify areas with poverty and racial segregation. The criteria for these filters were:

- Poverty: Tracts with at least 30 percent of population under the federal poverty line;
- Racial Segregation: Tracts with location quotient higher than 1.25 for Blacks, Hispanics, Asians, or all people of color in comparison to the County

Table 13.3-15: Domains and List of Indicators for Opportunity Maps

<i>Domain</i>	<i>Indicator</i>
Economic	Poverty Adult Education Employment Job Proximity Median home value
Environmental	CalEnviroScreen 4.0 pollution Indicators and values
Education	Math proficiency Reading proficiency High School graduation rates Student poverty rates

Source(s): California Fair Housing Task Force, Methodology for the 2021 TCAC/ HCD Opportunity Maps, December 2020

High resource areas have high index scores for a variety of opportunity indicators such as high employment rates, low poverty rates, proximity to jobs, high educational proficiency, and limited exposure to environmental health hazards. High resource tracts are areas that offer low-income residents the best chance of a high quality of life, whether through economic advancement, high educational attainment, or clean environmental health. Moderate resource areas have access to many of the same resources as the high resource areas but may have fewer job opportunities, lower performing schools, lower median home values, or other factors that lower their indexes across the various economic, educational, and environmental indicators. Low resource areas are characterized as having fewer opportunities for employment and education, or a lower index for other economic, environmental, and educational indicators. These areas have greater quality of life needs and should be prioritized for future investment to improve opportunities for current and future residents.

Information from opportunity mapping can help highlight the need for housing element policies and programs that would help to remediate conditions in low resource areas or areas of high segregation and poverty, and to encourage better access for low and moderate income, and black, indigenous, and people of color (BIPOC) households to housing in high resource areas.

Regional Trends

Figure 13.3-21 provides a visual representation of TCAC Opportunity Areas in Santa Clara County based on a composite score, where each tract is categorized based on percentile rankings of the level of resources within the region. The western part of the County has cities with the highest resources such as Palo Alto, Cupertino, Saratoga, Monte Sereno, and Los Gatos. The central part of the County has a mix of resource scores of high, moderate, and low with the largest low resource areas in San Jose and Morgan Hill. The eastern part of San Jose has areas with both the lowest and highest resource scores.

Local Trends

Santa Clara has a mix of resource scores. The northern part of the city has moderate and high resources, the central part of the city has low resources, and the southern part of the city has a mix of low, moderate, high, and highest resources. The areas with low resources also overlap with higher CalEnviroScreen Scores (50 to 74 percent) (Figure 13.3-36), lower Healthy Places Index Scores (50 to 75) (Figure 13.3-38), higher rates of LMI households (50 to 75 percent) and areas with higher non-White populations (61 to 80 percent). The new TCAC opportunity area map below (Figure 13.3-23) shows a shift in resources in certain areas of the City. North of highway 101 and the San Tomas Freeway the northern part of the City which was previously moderate resource is now high resource. Since the advent of City Specific Plans, we see a trajectory towards higher resource areas with greater investment increasing amenities for neighborhoods. Figure 13.3-23 shows that the City's site inventory (purple shapes) are generally dispersed from existing subsidized housing (red dots).

FIGURE 13.3-21: REGIONAL TCAC COMPOSITE SCORES BY TRACT (2021)

SANTA CLARA HOUSING ELEMENT

FIGURE 13.3-22: TCAC OPPORTUNITY AREAS – COMPOSITE SCORE – SANTA CLARA (2021)

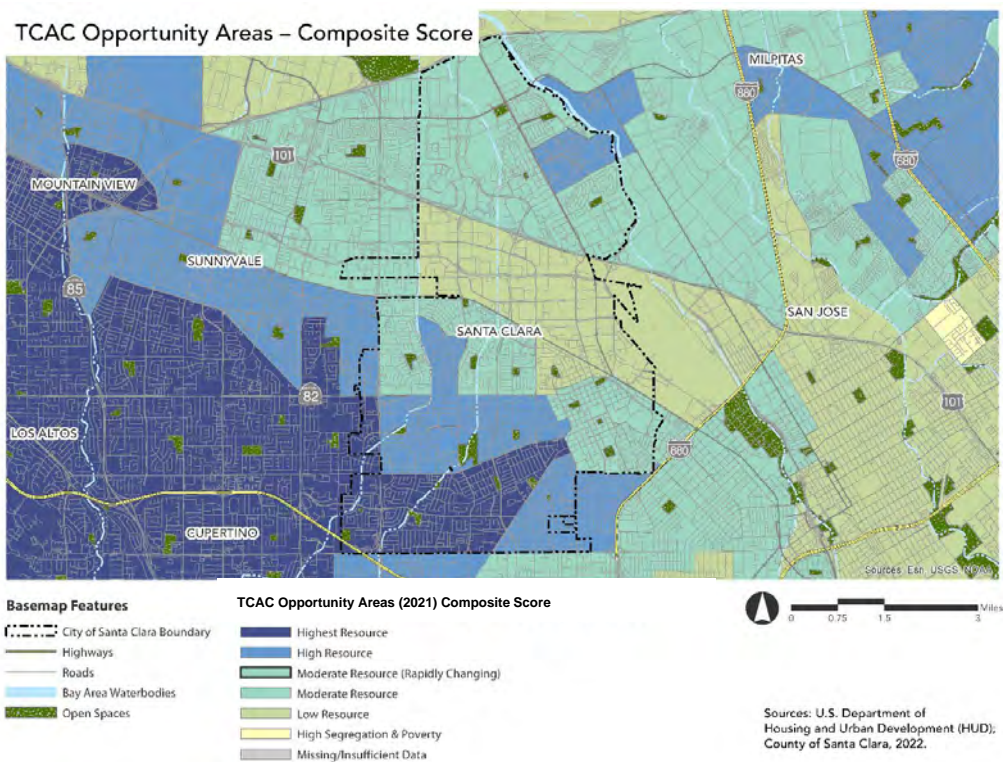

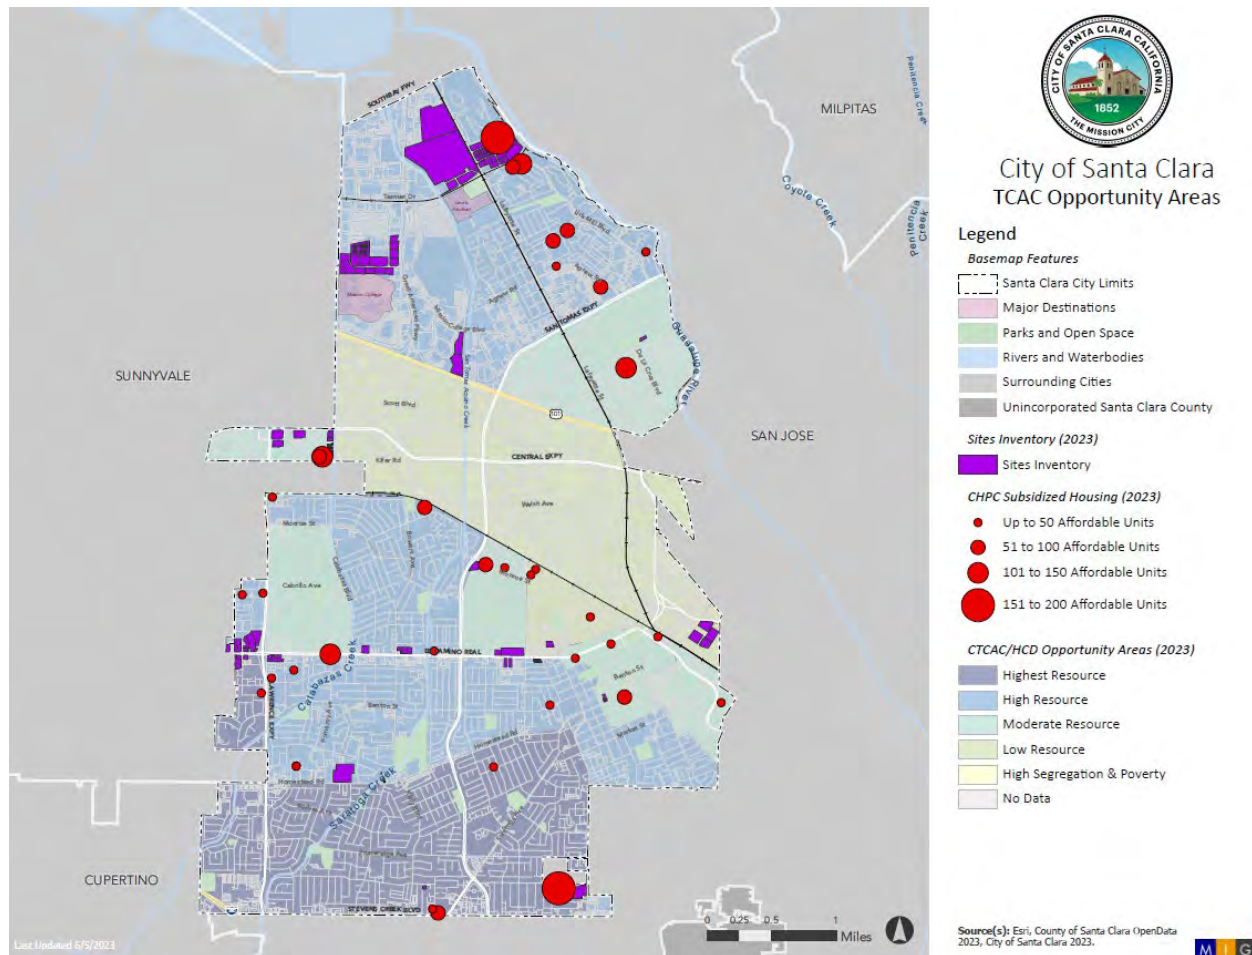

FIGURE 13.3-23: SITES INVENTORY, EXISTING AFFORDABLE HOUSING, AND TCAC OPPORTUNITY AREAS – COMPOSITE SCORE – SANTA CLARA (2023)

Opportunity Indices

This section presents the HUD-developed index scores based on nationally available data sources to assess residents' access to key opportunity assets in comparison to the County. Table 13.3-16 provides index scores or values (the values range from 0 to 100) for the following opportunity indicator indices:

- School Proficiency Index:** The school proficiency index uses school-level data on the performance of 4th grade students on state exams to describe which neighborhoods have high-performing elementary schools nearby and which are near lower performing elementary schools. The higher the index value, the higher the school system quality is in a neighborhood.
- Labor Market Engagement Index:** The labor market engagement index provides a summary description of the relative intensity of labor market engagement and human capital in a neighborhood. This is based upon the level of employment, labor force

SANTA CLARA HOUSING ELEMENT

participation, and educational attainment in a census tract. The higher the index value, the higher the labor force participation and human capital in a neighborhood.

- **Transit Trips Index:** This index is based on estimates of transit trips taken by a family that meets the following description: a 3-person single-parent family with income at 50 percent of the median income for renters for the region (i.e., the Core-Based Statistical Area (CBSA)). The higher the transit trips index value, the more likely residents in that neighborhood utilize public transit.
- **Low Transportation Cost Index:** This index is based on estimates of transportation costs for a family that meets the following description: a 3-person single-parent family with income at 50 percent of the median income for renters for the region/CBSA. The higher the index value, the lower the cost of transportation in that neighborhood.
- **Jobs Proximity Index:** The jobs proximity index quantifies the accessibility of a given residential neighborhood as a function of its distance to all job locations within a region/CBSA, with larger employment centers weighted more heavily. The higher the index value, the better the access to employment opportunities for residents in a neighborhood.
- **Environmental Health Index:** The environmental health index summarizes potential exposure to harmful toxins at a neighborhood level. The higher the index value, the less exposure to toxins harmful to human health. Therefore, the higher the index value, the better the environmental quality of a neighborhood (where a neighborhood is a census block-group).

Table 13.3-16: Opportunity Indices by Race/ Ethnicity – Santa Clara County

	<i>School Proficiency Index</i>	<i>Labor Market Index</i>	<i>Transit Trip Index</i>	<i>Low Transportation Cost Index</i>	<i>Jobs Proximity Index</i>	<i>Environmental Health Index</i>
Santa Clara County						
Total Population						
White, Non-Hispanic	81.85	82.15	68.07	91.22	52.75	58.84
Black, Non-Hispanic	74.05	74.24	73.41	93.10	57.03	53.45
Hispanic	58.86	61.91	64.53	91.30	43.19	54.62
Asian or Pacific Islander, Non-Hispanic	85.32	83.26	71.35	91.36	51.68	61.59
Native American, Non-Hispanic	69.43	68.36	67.23	91.76	50.57	56.68
Population Below Federal Poverty Line						
White, Non-Hispanic	77.47	79.47	70	92.22	52.67	56.88
Black, Non-Hispanic	55.29	63.66	64.3	90.61	41	59.89
Hispanic	50.56	54.77	64.34	92.15	43.58	53.07
Asian or Pacific Islander, Non-Hispanic	72.77	73.73	67.96	91.39	52.68	57.31
Native American, Non-Hispanic	75.1	75.82	76.71	94.47	72.22	63.36

Note: American Community Survey Data are based on a sample and are subject to sampling variability. See page 31 for index score meanings.

Education

Housing and school policies are mutually reinforcing, which is why it is important to analyze access to educational opportunities when assessing fair housing. At the most general level, school districts with the greatest amount of affordable housing tend to attract larger numbers of LMI families (largely composed of minorities). As test scores are a reflection of student demographics,

SANTA CLARA HOUSING ELEMENT

where Black/Hispanic/Latino students routinely score lower than their White peers, less diverse schools with higher test scores tend to attract higher income families to the school district. This is a fair housing issue because as higher income families move to the area, the overall cost of housing rises and an exclusionary feedback loop is created, leading to increased racial and economic segregation across districts as well as decreased access to high-performing schools for non-White students.

Regional Trends

The 2021 TCAC Opportunity Areas Education Composite Score for a census tract is based on math and reading proficiency, high school graduation rate, and student poverty rate indicators. The score is broken up by quartiles, with the highest quartile indicating more positive education outcomes and the lowest quartile signifying fewer positive outcomes.

Santa Clara County has 28 school districts. As of 2020, throughout the County there were 255 elementary schools, 61 middle schools, 55 high schools, 11 continuing education schools, 10 alternative schools, five junior high schools, four K-12 schools, two community day schools, and one special education school.³ The map below shows the TCAC education score for the County with the central and southern parts of the County including San Jose, Morgan Hill, and Gilroy showing scores between 0.25 - 0.50 which are less positive education scores. The cities on the western side of the County and Milpitas have scores above 0.75 which is the more positive education outcome score. The areas with lower scores correspond to areas with higher non-White populations and the areas with higher scores correspond to areas with lower non-White populations. Table 13.3-17 indicates that index values for school proficiency are higher for White residents, indicating a greater access to high quality schools. For populations below the federal poverty line, index values for school proficiency are highest among White, Native American (Non-Hispanic), and Asian or Pacific Islander (Non-Hispanic).

Local Trends

The northern part of Santa Clara has a TCAC education score of 0.50 to 0.75 which trend toward the more positive educational outcome score. The central part of Santa Clara has a score of between 0.25 to 0.50 which trends toward the less positive educational outcome score (note there are no public schools located in the central part of the City). The southern part of Santa Clara has a mix of scores between 0.25 to 0.50, 0.50 to 0.75 and above 0.75. The nearby cities of Mountain View and Milpitas mostly have TCAC education scores above 0.75 while the city of Sunnyvale has a mix of scores similar to Santa Clara.

³ Ed-data.org

According to the National Center for Education data from 2021, there were 23 public schools in Santa Clara (Figure 13.3-26). These public school rankings reflect the TCAC Education scores with schools in the northern part of the city receiving scores below the top 30 percent and schools in the southern part of the city receiving scores in the top 10 percent and above. There are no public schools located in the central part of the city.

FIGURE 13.3-24: REGIONAL TCAC EDUCATION SCORES (2021)

SANTA CLARA HOUSING ELEMENT

FIGURE 13.3-25: TCAC OPPORTUNITY AREAS – EDUCATION SCORE – SANTA CLARA (2021)

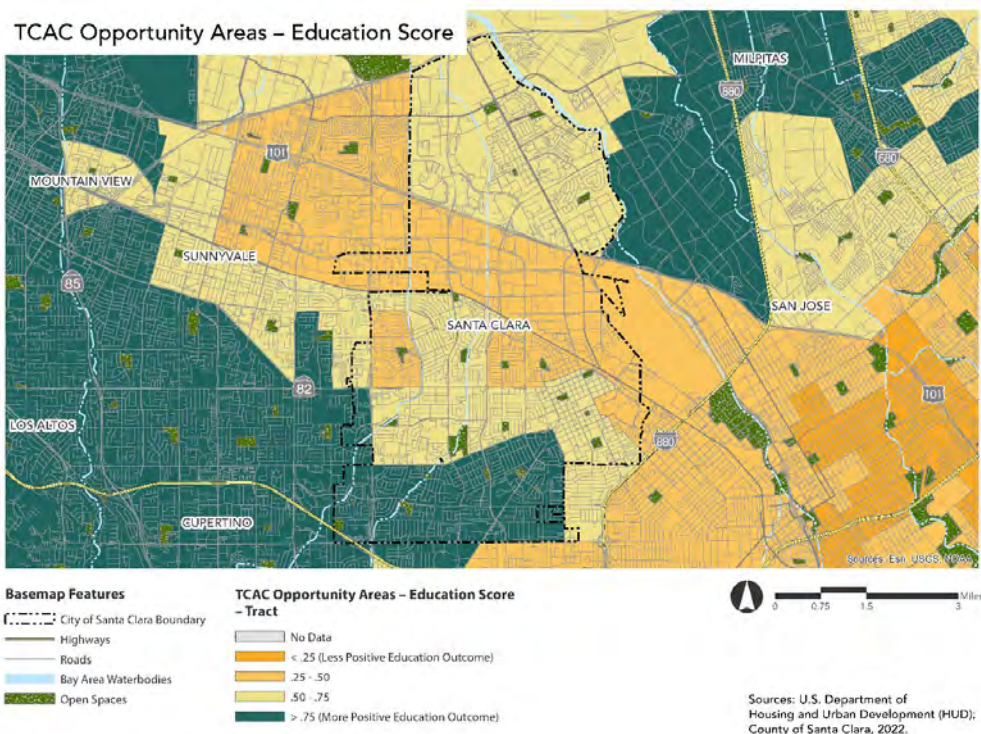

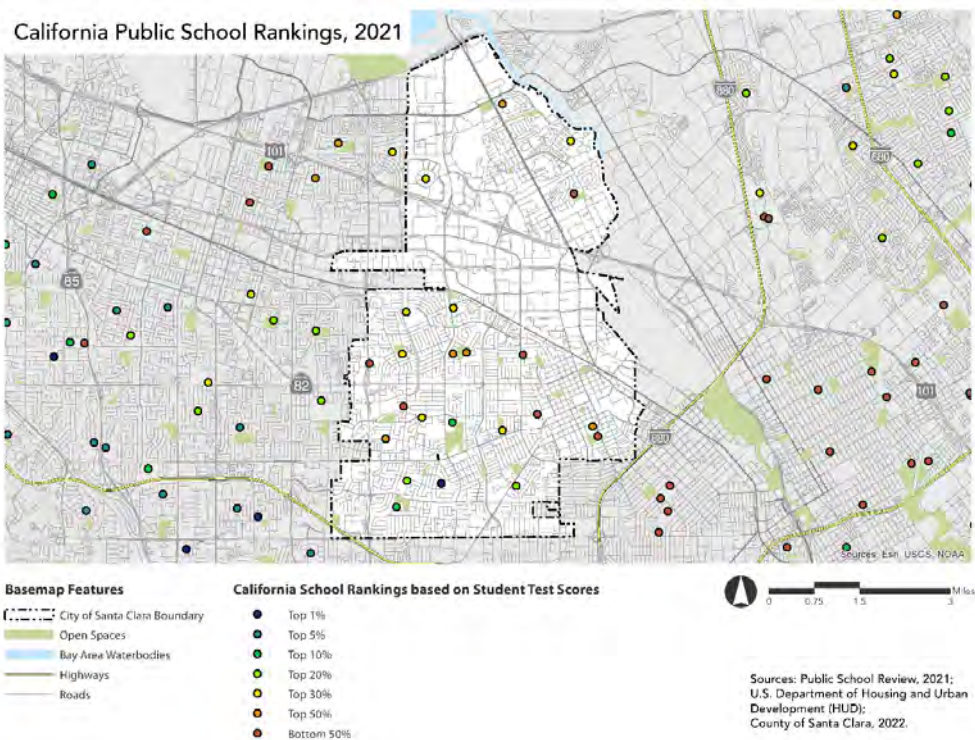

FIGURE 13.3-26: PUBLIC SCHOOL RANKINGS (2021)

Transportation

Access to public transit is of paramount importance to households affected by low incomes and rising housing prices, especially because lower income households are often transit dependent. Public transit should strive to link lower income persons, who are often transit dependent, to major employers where job opportunities exist. Access to employment via public transportation can reduce welfare usage and increase housing mobility, which enables residents to reside in housing outside of traditionally low-income neighborhoods.

Transportation opportunities are depicted by two indices: (1) the transit trips index and (2) the low transportation cost index. The transit trips index measures how often low-income families in a neighborhood use public transportation. The index ranges from 0 to 100, with higher values indicating a higher likelihood that residents in a neighborhood utilize public transit. The low transportation cost index measures cost of transportation and proximity to public transportation by neighborhood. It too varies from 0 to 100, and higher scores point to lower transportation costs in that neighborhood.

Regional Trends

In Santa Clara County, neither transit index, regardless of poverty level, varies noticeably across racial/ethnic categories. All races and ethnicities score highly on both indices, with values close in magnitude. If these indices are accurate depictions of transportation accessibility, it might be concluded that all racial and ethnic classes have high and relatively equal access to transportation at both the jurisdictional and regional levels. If anything, both indices appear to take slightly higher values for non-Hispanic Black residents and non-Hispanic Native-American residents, suggesting greater access to and lower costs for transit for these protected groups.

Santa Clara County is served by Valley Transportation Authority (VTA) which includes bus and light rail service throughout the County. VTA runs three light rail lines, 19 rapid bus lines, 24 local bus lines, four express shuttles, and nine shuttles. The County is very well connected by public transit to the larger Bay Area region. The area is also served by Amtrak with stations in Santa Clara and San Jose. The eastern part of Santa Clara County is served by Bay Area Rapid Transit (BART). Both San Jose and Milpitas have BART stops and are served by the Green and Orange lines. The Orange line connects to Richmond and the Green line connects to San Francisco.

SANTA CLARA HOUSING ELEMENT

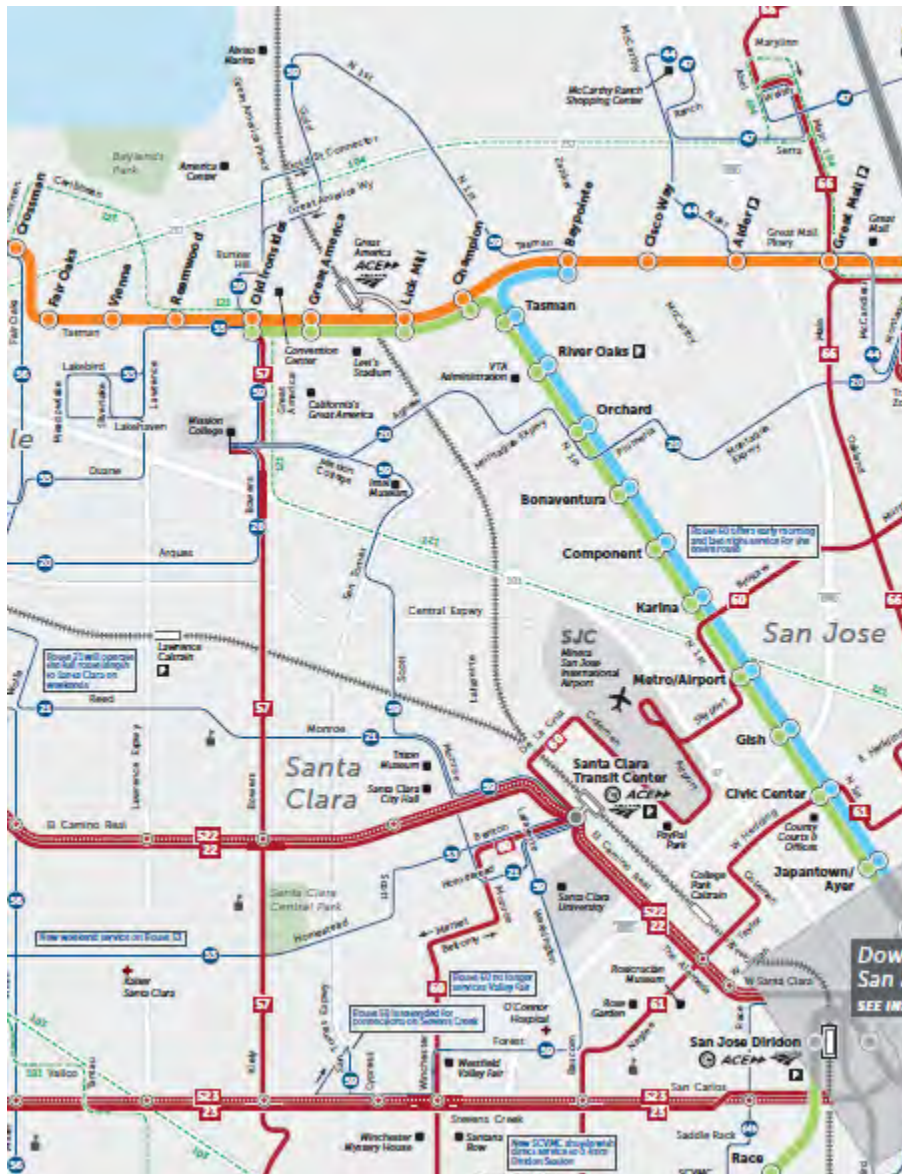

FIGURE 13.3-27: REGIONAL PUBLIC TRANSIT ACCESS (2021)

Local Trends

The City of Santa Clara is serviced by Valley Transportation Authority (VTA) including both bus and light rail service. The City of Santa Clara is serviced by two rapid bus lines, three local bus lines, two light rail line, the Altamont Corridor Express (ACE) and Amtrak rail. According to the website alltransit.cnt.org, Santa Clara has a transit performance score of seven (out of 10). This score is determined by the number of transit trips per week a household takes and the number of jobs accessible by transit for a geographic area. Nearby cities of Mountain View and Sunnyvale have higher transit scores of 7.7 and 7.2 respectively, while Milpitas has a lower score of 6.7. Transit access is significantly better in South Santa Clara where there are two rapid bus lines, three frequent bus lines, and the Santa Clara Caltrain Station which will be expanded to also accommodate a BART station connecting to San Jose and the East Bay. Central Santa Clara has a few local bus routes and the Lawrence Caltrain Station while North Santa Clara has several light rail stations with a less robust network of local bus routes. Figure 13.3-28 shows the VTA transit map.

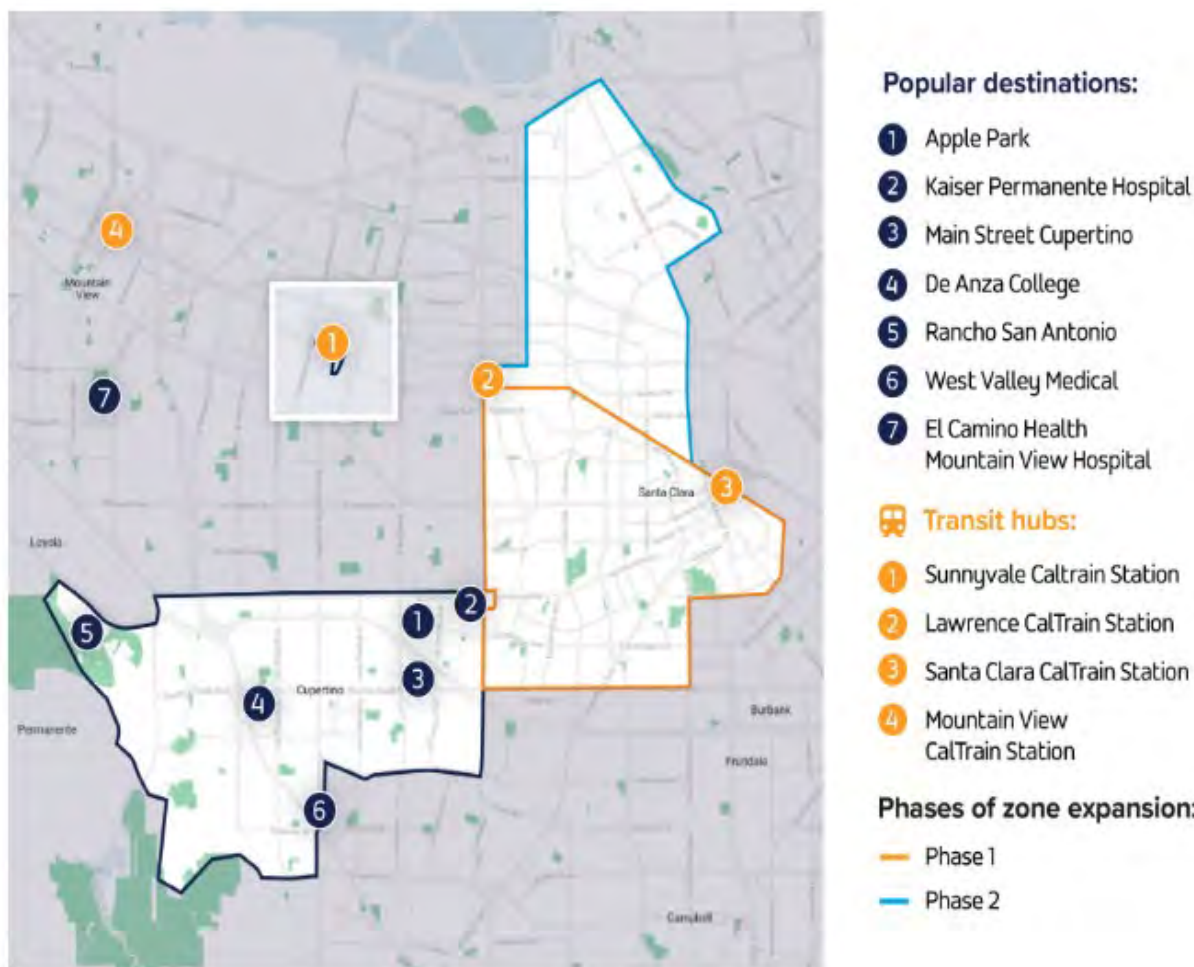

FIGURE 13.3-28: VTA TRANSIT MAP (2023)

The cities of Cupertino and Santa Clara have partnered on the Silicon Valley Hopper app-based ride-share program. The program will provide seamless EV ride share services with a \$3.50 fare between any two points within the service zone. The service will help residents get to major employment centers, hospitals, and rail transit stations. Phase I will serve South Santa Clara and Phase II will serve Central and North Santa Clara starting in 2027. Figure 13.3-29 shows a map of the Valley Hopper service area.

FIGURE 13.3-29: VALLEY HOPPER SERVICE AREA (2023)

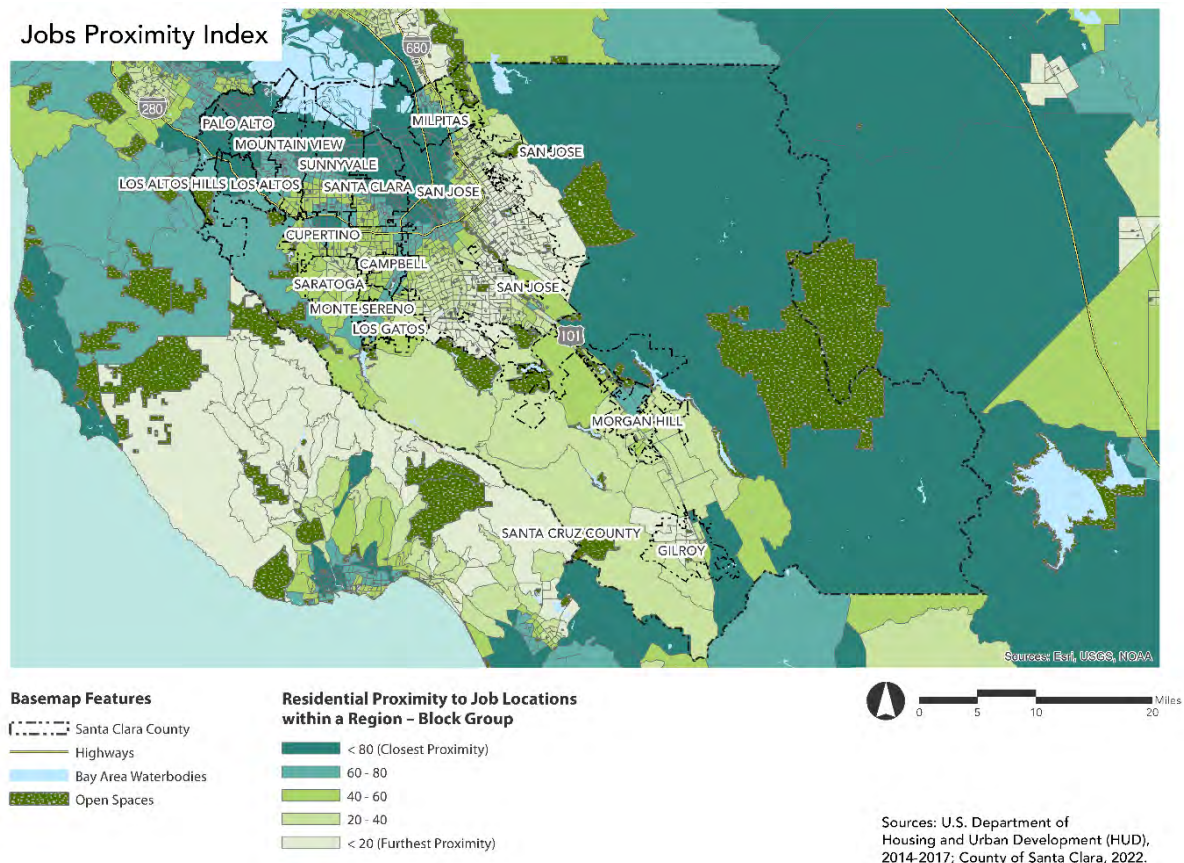

Economic Development

Employment opportunities are depicted by two indices: (1) the labor market engagement index and (2) the jobs proximity index. The labor market engagement index provides a summary description of the relative intensity of labor market engagement and human capital in a neighborhood, taking into account the unemployment rate, labor-force participation rate, and percent with a bachelor's degree or higher. The index ranges from 0 to 100, with higher values indicating higher labor force participation and human capital. The jobs proximity index quantifies the accessibility of a neighborhood to jobs in the region by measuring the physical distances between jobs and places of residence. It too varies from 0 to 100, and higher scores point to better accessibility to employment opportunities.

Regional Trends

In Santa Clara County, Black Non-Hispanic, White Non-Hispanic, Native American Non-Hispanic, and Asian or Pacific Islander residents all have similar index scores around 50, while Hispanic residents have an index score of 43.19. The map below shows the spatial variability of jobs proximity in Santa Clara County. Cities in northern Santa Clara County along the southern part of San Francisco bay have the highest jobs proximity index of 60 to 80 and 80 and above. This likely reflects the fact that these cities are closer to major economic regions of Silicon Valley and San Francisco. Southern and eastern San Jose have lower jobs proximity index scores (between 40 to 60, 20 to 40, and below 20) as these areas are further away from the economic hubs to the west. The cities of Saratoga, Los Gatos, Morgan Hill, and Gilroy have lower jobs proximity index scores as they are more residential than the surrounding cities. Morgan Hill and Gilroy are also in the southern part of the County, geographically further away from economic hubs. The TCAC scores for the region have some overlap with jobs proximity index scores. The northern and western parts of the County have the highest TCAC scores (above 75) which is the most positive economic outcome, while the eastern, central, and southern parts of the County have scores between 50 to 75, 25 to 50 and below 25 which is the least positive economic outcome. Again, eastern San Jose, Morgan Hill, and Gilroy have lower TCAC scores than other cities in the County.

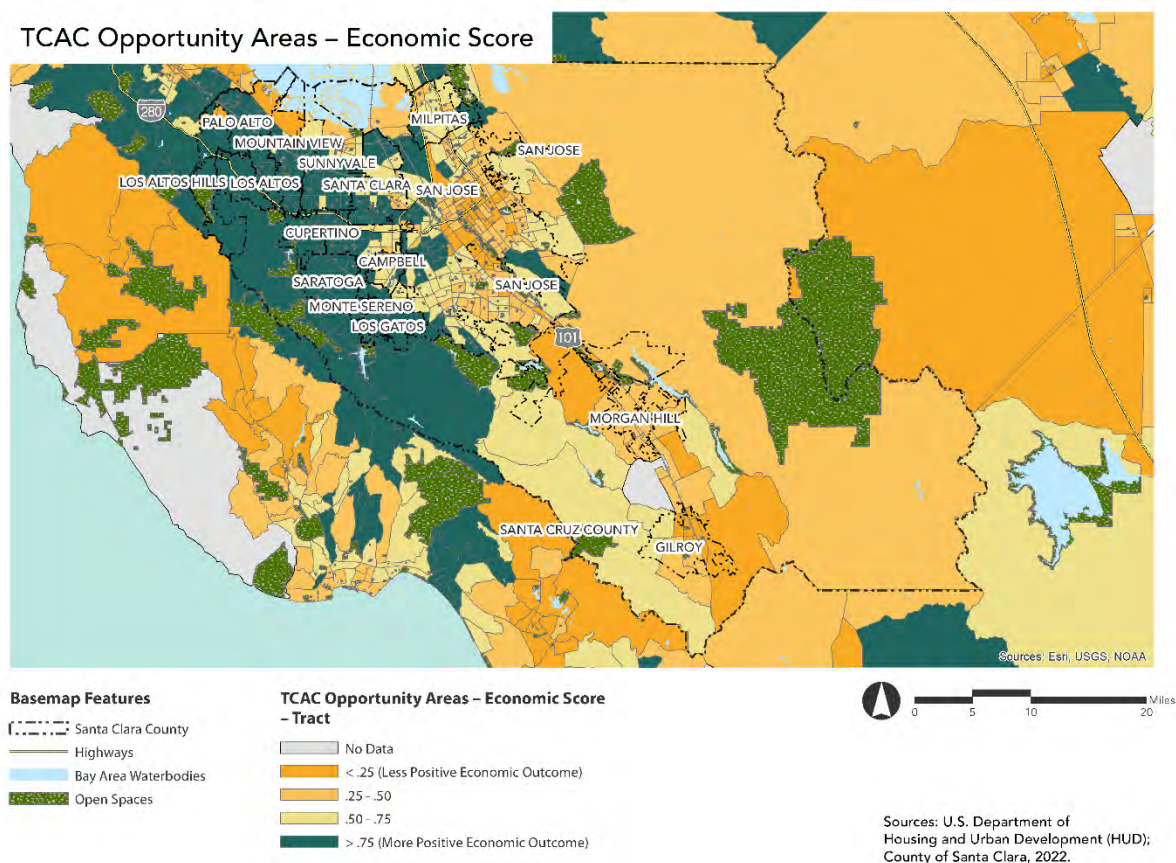

FIGURE 13.3-30: REGIONAL JOBS PROXIMITY INDEX (2021)

SANTA CLARA HOUSING ELEMENT

FIGURE 13.3-31: REGIONAL TCAC OPPORTUNITY AREAS – ECONOMIC SCORE (2021)

Local Trends

The northern and central parts of Santa Clara have the highest jobs proximity index scores (above 80) which indicates closest proximity. The southern part of the city has a mix of scores between 60 to 80 and 40 to 60, as they are further away from economic hubs in the northern and eastern parts of the County. The TCAC scores are more variable within the central part of the city with scores between 50 to 75, nearing the more positive economic outcome. Areas in the southern part of the City have scores as low as 25 to 50. The economic score takes into account levels of poverty, adult education, employment, job proximity, and median home value for the area. While job proximity is high for most of the city, income, education, and home values are more variable. Central Santa Clara has more LMI households and lower household median incomes, likely influencing this score. Nearby cities of Mountain, Sunnyvale, and Milpitas have similar jobs proximity index scores, while Milpitas has lower TCAC scores than the three other cities.

FIGURE 13.3-32: JOBS PROXIMITY INDEX – SANTA CLARA (2021)

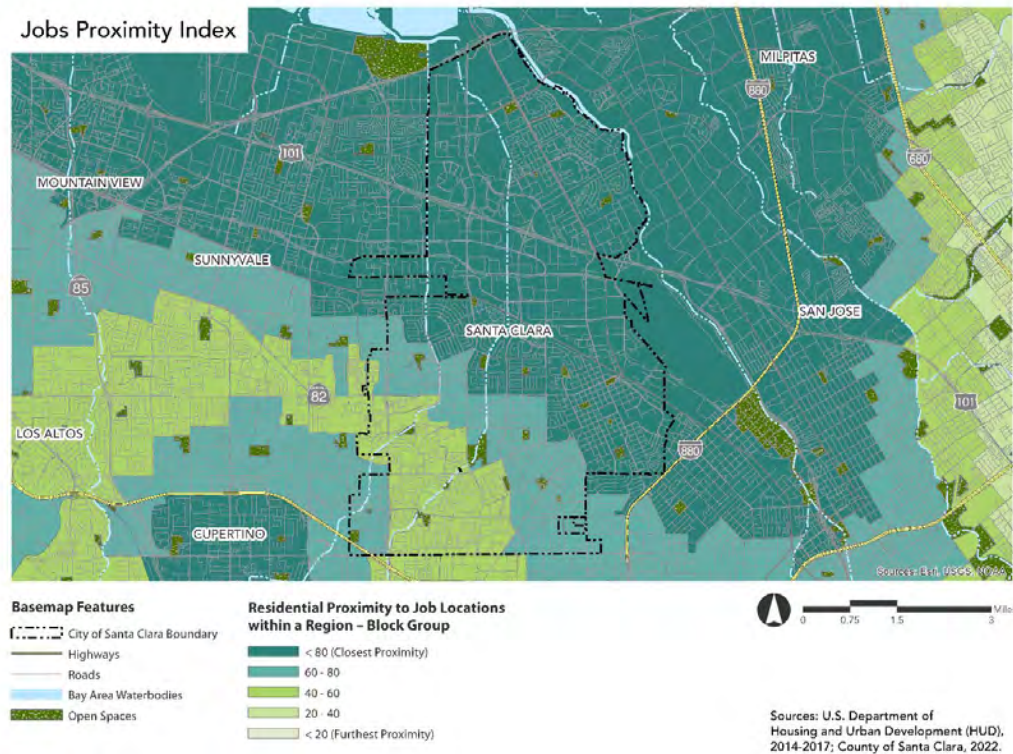

FIGURE 13.3-33: TCAC OPPORTUNITY AREA – ECONOMIC SCORE – SANTA CLARA (2021)

Environment

The Environmental Health Index summarizes potential exposure to harmful toxins at a neighborhood level. Index values range from 0 to 100 and the higher the index value, the less exposure to toxins harmful to human health. Therefore, the higher the value, the better the environmental quality of a neighborhood (where a neighborhood is a census block-group). Environmental health index scores are similar across all races, with scores in the mid-50s to 60. For populations below the poverty line, Native American Non-Hispanic residents have the highest score, of 63.36, while other groups have scores in the mid-50s.

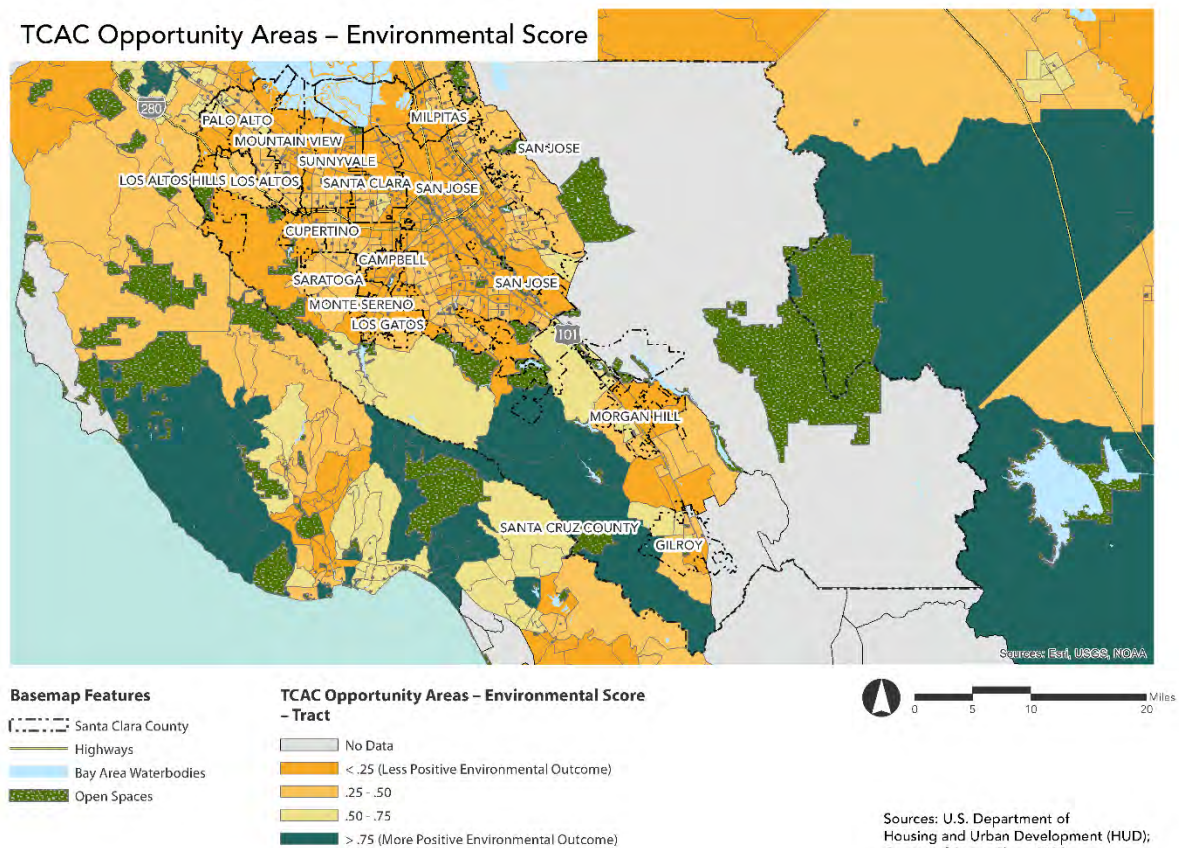

CalEnviroScreen was developed by the California Environmental Protection Agency (CalEPA) to evaluate pollution sources in a community while accounting for a community's vulnerability to the adverse effects of pollution. Measures of pollution burden and population characteristics are combined into a single composite score that is mapped and analyzed. Higher valued scores indicate higher cumulative environmental burden and population impacts.

The California Office of Environmental Health Hazard Assessment (OEHHA) compiles these scores to help identify California communities disproportionately burdened by multiple sources of pollution. In addition to environmental factors (pollutant exposure, groundwater threats, toxic sites, and hazardous materials exposure) and sensitive receptors (seniors, children, persons with asthma, and low birth weight infants), CalEnviroScreen also considers socioeconomic factors such as educational attainment, linguistic isolation, poverty, and unemployment.

Regional Trends

The map below displays the Environmental Score for Santa Clara County based on CalEnviroScreen 3.0 Pollution Indicators and Values that identify communities in California disproportionately burdened by multiple sources of pollution and that face vulnerability due to socioeconomic factors. Much of the County received scores below 25 to 50 percent, indicating a less positive environmental outlook. While these scores suggest high levels of vulnerable communities, the data has limitations. From the CalEnviroScreen website: "Opportunity mapping also has limitations. For example, maps' accuracy is dependent on the accuracy of the data behind them. Data may be derived from self-reported surveys of subsets of an area's population, and sometimes may not be recorded or reliable in some areas. Further, even the most recent publicly available datasets typically lag by two years, meaning they may not adequately capture conditions in areas undergoing rapid change. The methodology described in this document attempts to address each of these limitations to the degree possible."

FIGURE 13.3-34: REGIONAL TCAC OPPORTUNITY AREAS – ENVIRONMENTAL SCORE (2021)

The map below displays updated scores for CalEnviroScreen 4.0 released by the California Office of Environmental Health Hazard Assessment, suggesting a more positive environmental outlook for the area. Much of the county has scores below 25 to 49 percent suggesting fewer adverse environmental impacts. There is a concentration in and around San Jose where scores are between 50 to 74 percent and 75 percent and higher indicating high levels of adverse environmental impacts. The eastern edge of Gilroy also reports scores of 75 percent or higher.

SANTA CLARA HOUSING ELEMENT

FIGURE 13.3-35: REGIONAL CALENVIROSCREEN 4.0 (2021)

Local Trends

The City of Santa Clara has the most positive CalEnviroScreen scores in the northern and southern parts of the city (25 to 49 percent and below 24 percent) while the central part of the city has scores between 50 to 74 percent. The central part of Santa Clara with less positive environmental scores is likely due to the fact that the area is predominantly industrial and is located between Highway 101 to the north, the Union Pacific Railroad Corridor to the south, and the San Jose International Airport to the east. The nearby cities of Mountain View, Sunnyvale, and Milpitas have CalEnviroScreen scores between 50 and 74 percent.

FIGURE 13.3-36: CALENVIROSCREEN 4.0 – SANTA CLARA (2021)

Health and Recreation

Residents should have the opportunity to live = in healthy communities. The Healthy Places Index (HPI) is a new tool that allows local officials to diagnose and change community conditions that affect health outcomes and the wellbeing of residents. The HPI tool was developed by the Public Health Alliance of Southern California to assist in comparing community conditions across the state, and combines 25 community characteristics such as housing, education, economic, and social factors into a single indexed HPI Percentile Score, where lower percentiles indicate less healthy conditions and higher scores indicate healthier conditions.

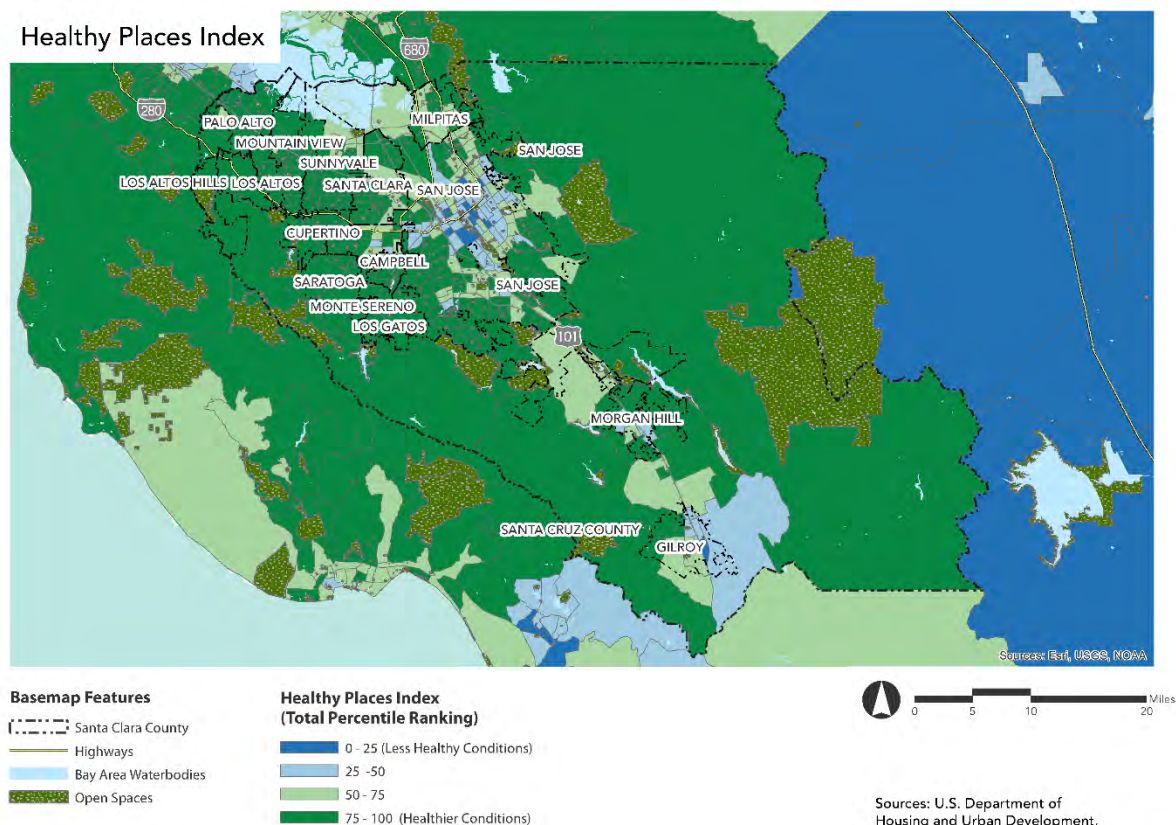

Regional Trends

The entire County has Healthy Places Index (HPI) scores between 50 to 75 and 75 to 100, indicating healthier conditions. The areas with the slightly lower scores of 50 to 75 are in Santa Clara, Milpitas, San Jose, Morgan Hill, and Gilroy.

SANTA CLARA HOUSING ELEMENT

FIGURE 13.3-37: REGIONAL HEALTHY PLACES INDEX (2021)

Local Trends

Northern and southern parts of Santa Clara have HPI scores between 75 to 100 while central Santa Clara has scores between 50 to 75, reflecting the CalEnviroScreen scores. Mountain View and Sunnyvale have scores between 75 to 100 while Milpitas has more areas with scores between 50 to 75.

FIGURE 13.3-38: HEALTHY PLACES INDEX – SANTA CLARA (2021)

In summary Santa Clara has a mix of CTCAC opportunity area scores. The northern part of the city has moderate and high resources, the central part of the city has low resources, and the southern part of the city has a mix of low, moderate, high, and highest resources. The area with low resources also overlap with higher CalEnviroScreen Scores (more pollution), lower Healthy Places Index Scores, lower educational outcome scores, higher rates of LMI households, and areas with larger non-White populations. Job proximity is high for most of the city.

Disproportionate Needs

Disproportionate housing needs generally refers to a condition in which there are significant disparities in the proportion of members of a protected class experiencing a category of housing need when compared to the proportion of members of any other relevant groups, or the total population experiencing that category of housing need in the applicable geographic area. The Comprehensive Housing Affordability Strategy (CHAS) developed by the Census for HUD provides detailed information on housing needs by income level for different types of households in Contra Costa County. Housing problems considered by CHAS include:

- Housing cost burden, including utilities, exceeding 30 percent of gross income;
- Severe housing cost burden, including utilities, exceeding 50 percent of gross income;

SANTA CLARA HOUSING ELEMENT

- Overcrowded conditions (housing units with more than one person per room); and
- Units with physical defects (lacking complete kitchen or bathroom)

According to the Santa Clara AFH, a total of 252,622 households (34.5 percent) in the County experience any one of the above housing problems; and 144,306 households (19.7 percent) experience severe housing problems. Based on relative percentage, Hispanic and Black households experience the highest rate of housing problems regardless of severity. Table 13.3-17 lists the demographics of households with housing problems in the County.

Table 13.3-17: Demographics of Households with Housing Problems in Santa Clara County

	<i>Total Number of Households</i>	<i>Households with Housing Problems</i>		<i>Households with Severe Housing Problems</i>	
White	88,554	329,170	26.9%	43,381	13%
Black	8,376	16,756	49.9%	4,813	28.7%
Asian/Pacific Islander	77,787	213,541	36.4%	44,730	20.9%
Native American	477	3,026	15.7%	286	9.4%
Other	6,137	48,509	12.65%	3,210	6.6%
Hispanic	71,291	213,541	36.4%	47,886	39.9%
Total	252,622	731,019	34.5%	144,306	19.7%

Family Households (> 5 people)	78,571
Non-family Households	171,734

Source(s): Contra Costa County AI (2020)

Cost Burden (Overpayment)

Housing cost burden, or overpayment, is defined as households paying 30 percent or more of their gross income on housing expenses, including rent or mortgage payments and utilities. Renters are more likely to overpay for housing costs than homeowners. Housing cost burden is considered a housing need because households that overpay for housing costs may have difficulty affording other necessary expenses, such as childcare, transportation, and medical costs.

Regional Trends

The map below identifies concentrations of cost-burdened renters in Mountain View, San Jose, and Morgan Hill. These cities have areas with renters experiencing overpayment above 80 percent. The rest of the County mostly has rates between 20 to 40 percent, 40 to 60 percent, and 60 to 80 percent. Areas along the eastern part of the County have lower overpayment rates below 20 percent.

FIGURE 13.3-39: REGIONAL OVERPAYMENT BY RENTERS (2021)

Local Trends

As presented in Table 13.3-19, 50.7 percent of all households in Santa Clara experience cost burdens. This rate is much higher for renters than owners (63 and 34.4 percent, respectively). The rate of cost burden for all households in the County is slightly lower at 49.7 percent, but the trend still stands with 64.2 percent of renters experiencing cost burden versus 38.6 percent of owners.

FIGURE 13.3-40: OVERPAYMENT BY RENTERS – SANTA CLARA (2021)

Overcrowded Households

Overcrowding is defined as housing units with more than one person per room (including dining and living rooms but excluding bathrooms and kitchen).

Regional Trends

Figure 13.3-41 indicates that most of the County has low rates of overcrowded households. San Jose has a concentration of overcrowded homes with percentages between 8.2 percent and as high as 70 percent. The rest of the County mostly has overcrowding rates below 12 percent.

FIGURE 13.3-41: REGIONAL OVERCROWDED HOUSEHOLDS BY TRACT (2015)

Local Trends

According to the 2019 five-year ACS estimates displayed in Table 13.3-20, 5.2 percent of County households are overcrowded, and 2.9 percent of households are severely overcrowded. These rates are higher for the City of Santa Clara with 6.2 percent of households experiencing overcrowding and 3.4 percent experiencing severe overcrowding. Across both the County and City, overcrowding and severe overcrowding rates are higher for renters than owners.

SANTA CLARA
HOUSING ELEMENT

Table 13.3-20: Overcrowded Households – Santa Clara County and Santa Clara

	<i>Santa Clara County</i>		<i>Santa Clara</i>	
	<i>Overcrowded (>1.0 to 1.5 persons per room)</i>	<i>Severely Overcrowded (>1.5 persons per room)</i>	<i>Overcrowded (>1.0 to 1.5 persons per room)</i>	<i>Severely Overcrowded (>1.5 persons per room)</i>
Owner-Occupied	1.4%	0.4%	0.9%	0.3%
Renter-Occupied	3.7%	2.4%	5.2%	3.1%
All HH	5.2%	2.9%	6.2%	3.4%

Source(s): American Community Survey, 2015-2019. Table B25014

The map below shows areas where overcrowding rates are higher in Santa Clara. The northern part of the city has overcrowding rates of 12 and 15 percent, with a small concentration in the southern part of the city with the same rates. The rest of the city has overcrowding rates below 8.2 percent. The northern part of the city has overcrowding rates of 12 and 15 percent and Asian residents are disproportionately concentrated in 3 out of 4 census tracts in this area. Hispanic and Latino residents are disproportionally concentrated in the census tract adjacent to De La Cruz Blvd. and Highway 101 with overcrowding rates at 15 percent. This census tract also overlaps with higher rates of HCV use (5 to 15 percent). The rest of the city has overcrowding rates below 8.2 percent.

In South Santa Clara the census tract north of El Camino Real bordered by San Tomas and Scott Blvd has an overcrowding rate of 15% and also has a disproportionately high number of Hispanic/Latino residents (24.5%). The census tract South of El Camino Real bounded by Kiely and San Tomas Expressway has an overcrowding rate of 12% and has a disproportionately high number of Asian residents (54%). The City's highest rates of overcrowding (15%) are impacting areas that are disproportionally populated by Hispanic/Latino residents.

The nearby city of Mountain View has overcrowding rates below 8.2 percent, while both Sunnyvale and Milpitas have overcrowding rates at 12 percent. Sunnyvale also has a few areas where the rate rises to 20 percent.

FIGURE 13.3-42: CONCENTRATION OF OVERCROWDED HOUSEHOLDS – SANTA CLARA (2021)

Substandard Conditions

Incomplete plumbing or kitchen facilities can be used to measure substandard housing conditions.

Regional Trends

According to 2015-2019 ACS estimates, 0.2 percent of households in Santa Clara County lack complete kitchen facilities and 0.2 percent of households lack complete plumbing facilities. Renter households are more likely to lack complete facilities compared to owner households.

Local Trends

In Santa Clara, 1.3 percent of households lack complete kitchen facilities and 0.2 percent lack complete plumbing facilities. Renter households are more likely to lack complete facilities compared to owner households. The City does not have recent citywide data on substandard conditions, however older lower rent apartment complexes are generally found along the west side of Lafayette north of Hwy 101, within the central city's industrial belt, and in the southeastern Old Quad area south of El Camino Real. These areas may experience a higher need for rehabilitation than other parts of the City that are predominantly single-family or newer multi-family homes. The City intends to gather more consistent data on substandard conditions

SANTA CLARA
HOUSING ELEMENT

through a new proactive multifamily code enforcement program. Although Santa Clara does have an aging housing stock with 21 percent of homes built between 1950 and 1959, 19 percent built between 1960 and 1969, and 17 percent built between 1970 to 1979⁴, rehabilitation programs have not been widely subscribed to. This may be due in part to the fact that housing stock is well maintained due to the high value of homes based on market conditions in the area. The City does recognize that housing stock continues to age therefore monitoring and enforcement will continue to be an ongoing operation as addressed by Action 4 of the Housing Plan which aims to maintain housing stock and specifically focus on rehabilitation for households with a gross income at or below 80 percent of the County median income.

Table 13.3-21: Substandard Housing Conditions – Santa Clara County and Santa Clara

	<i>Santa Clara County</i>			<i>Santa Clara</i>		
	<i>Owner</i>	<i>Renter</i>	<i>All HHs</i>	<i>Owner</i>	<i>Renter</i>	<i>All HHs</i>
Lacking complete kitchen facilities	0.2%	0.7%	0.9%	0.3%	1%	1.3%
Lacking complete plumbing facilities	0.1%	0.1%	0.2%	0.2%	.05%	0.2%

Source(s): American Community Survey, 2015-2019, Table B25053, B25049

In summary, by percentage Hispanic and Black households experience the highest rate of housing problems regardless of severity across Santa Clara County. Based on absolute numbers, Hispanic/Latino, Asian and Pacific Islander, and White households have the largest number of people with severe housing problems in the County. Overcrowding rates in the City of Santa Clara are higher than the County rates with 6.2 percent of households experiencing overcrowding and 3.4 percent experiencing severe overcrowding. The northern part of the city and a few areas in Southern Santa Clara have overcrowding rates of 12 and 15 percent. Overcrowding is occurring in areas that are disproportionately populated by Asian and Hispanic/Latino residents.

⁴ Towncharts.com

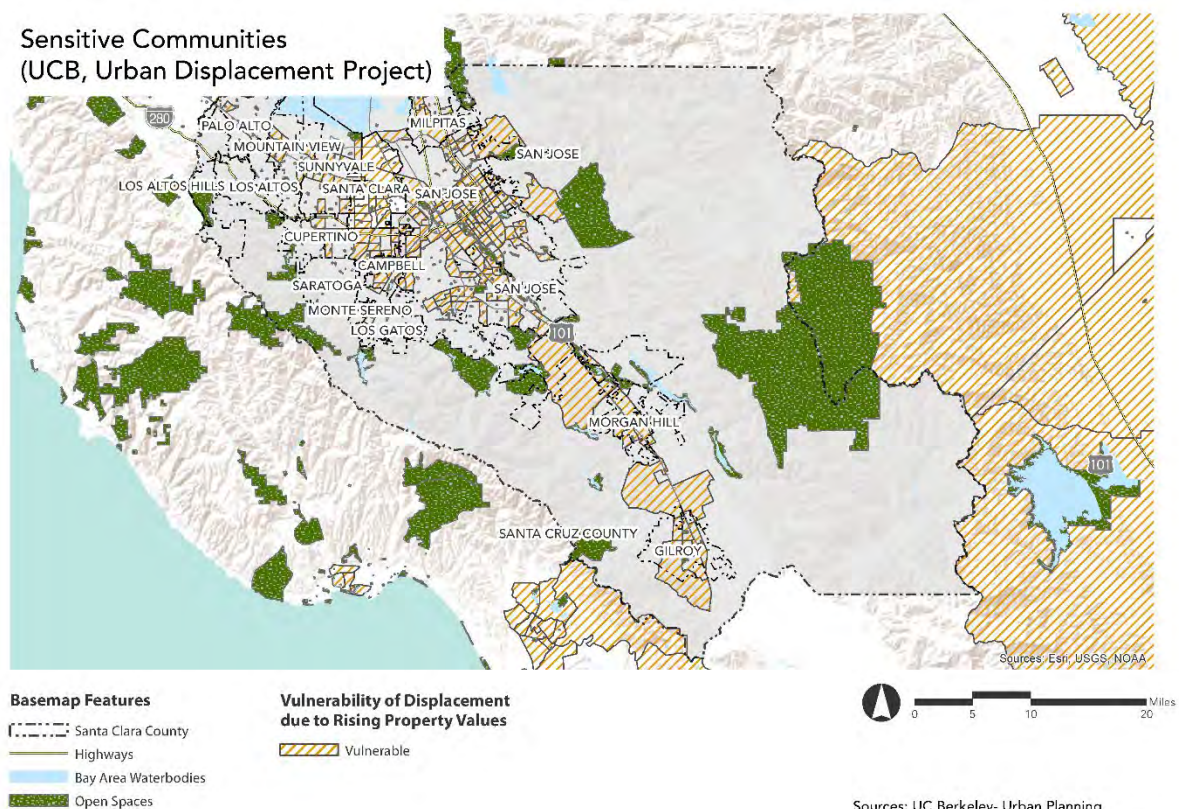

Displacement Risk

Displacement occurs when housing costs or neighboring conditions force current residents out and rents become so high that lower-income people are excluded from moving in. UC Berkeley's Urban Displacement Project states that a census tract is a sensitive community if the proportion of very low income residents was above 20 percent in 2017 and the census tracts meets two of the following criteria: (1) Share of renters above 40 percent in 2017; (2) Share of Non-White population above 50 percent in 2017; (3) Share of very low-income households (50 percent AMI or below) that are also severely rent burdened households above the county median in 2017; or (4) Nearby areas have been experiencing displacement pressures.

Regional Trends

Using this methodology, there are a number of areas in Santa Clara County identified as sensitive communities. Sensitive communities primarily lie along the Highway 101 corridor ranging from Sunnyvale to Gilroy and extend out to Cupertino in the west and east San Jose in the east. Housing prices in this area have continued to rise as the technology industries boom in Silicon Valley, explaining the high percentage of areas in the County identified as sensitive communities.

FIGURE 13.3-43: REGIONAL SENSITIVE COMMUNITIES AT RISK OF DISPLACEMENT BY TRACT (2021)

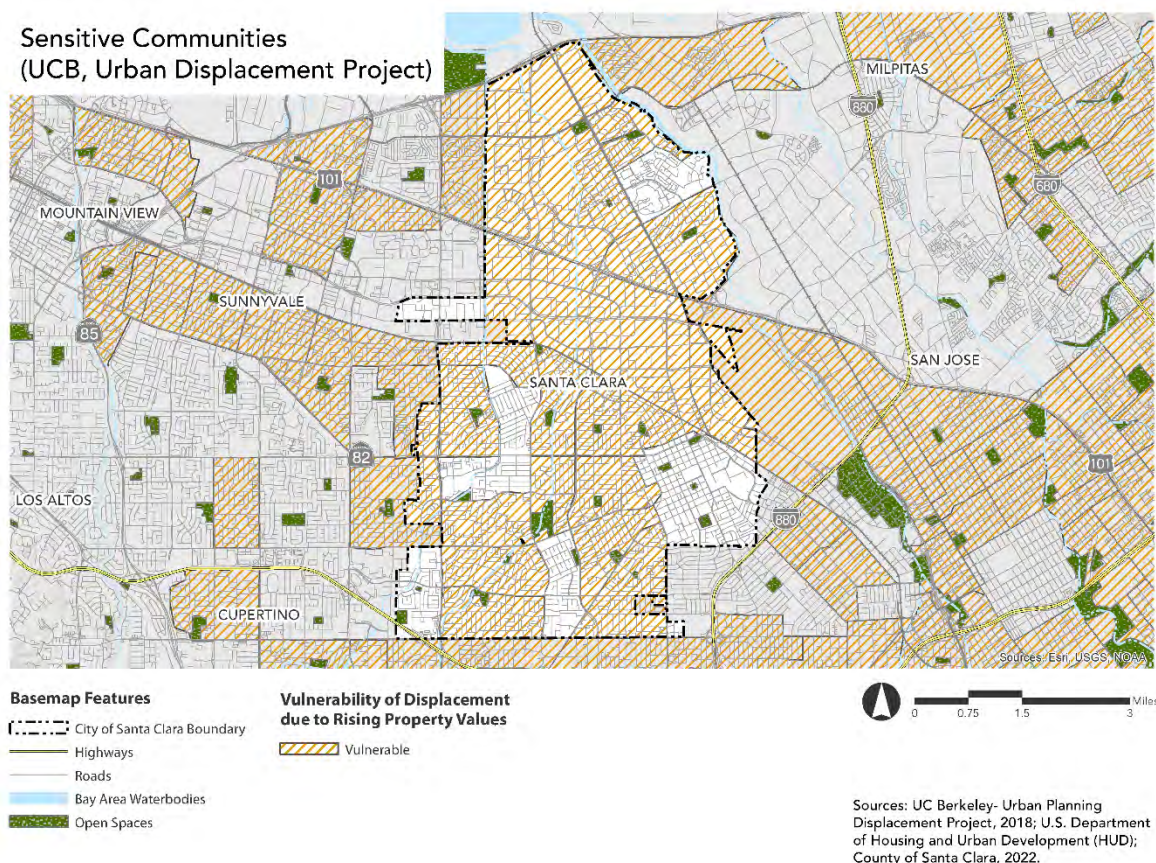

SANTA CLARA HOUSING ELEMENT

Local Trends

Most of Santa Clara was identified as a sensitive community, with only a few tracts in the south not identified as sensitive communities. Mountain View, Sunnyvale, and Milpitas also have areas identified as sensitive communities, albeit fewer than Santa Clara. Despite much of the City being identified as a sensitive community, the City has not yet seen much direct displacement of current residents as a result of redevelopment. Development in the City has primarily occurred with the rezoning of existing commercial and industrial properties into higher density multi-family housing. Despite the low current rate of displacement, the City has proactively developed actions to address the potential for future displacement. Both action 6 and action 13, outlined in Table 13.3-23 below actively work to mitigate residential displacement by exploring funding to support affordable housing acquisition and rehabilitation and program and policy development to prevent displacement.

FIGURE 13.3-44: SENSITIVE COMMUNITIES (UCB, URBAN DISPLACEMENT PROJECT) – SANTA CLARA (2021)

In summary while direct displacement due to redevelopment has not occurred often in recent years, it is likely that indirect displacement due to high rents and home prices across the Bay

Area is contributing to overcrowding and is forcing people to move away from Santa Clara. It is possible that development pressure has been focused on the City's specific plan areas and that once these areas are built out, developers may look to redevelop older lower density buildings that are naturally occurring affordable housing. This indicates a need to build more affordable housing, and policies that prevent a net loss of affordability if older market rate buildings are redeveloped, and to potentially require relocation assistance for displaced residents.

AFFH Analysis of the Sites Inventory

An important part of the AFFH analysis is looking at where the site inventory is directing housing growth and how that will replace segregated living patterns with integrated and balanced living patterns and convert any racially or ethnically concentrated areas that may exist into areas of opportunity for households at all income levels. The site inventory in chapter 13.3 places 82% of the City's housing growth over the next 8 years into in HCD/TCAC Opportunity Map High or Highest Resource areas. The site inventory includes a buffer of additional units above the required RHNA so the following figures exceed 100%.

- 101 percent of the City's Very Low Income RHNA units are located in High or Highest Resource areas.
 - VLI RHNA = 2,872 units.
 - VLI Units in Sites Inventory: 251 in Highest Resource Areas (9% of VLI RHNA) and 2,640 in High Resource Areas (92% of VLI RHNA).
- 147 percent of the City's Low Income RHNA units located in High or Highest Resource areas.
 - LI RHNA = 1,653 units.
 - LI Units in Sites Inventory: 361 in Highest Resource Areas (22% of LI RHNA) and 2,075 in High Resource Areas (126% of LI RHNA).
- 124 percent of the City's Moderate RHNA units located in High or Highest Resource areas.
 - Moderate RHNA = 1,981 units.
 - Moderate Units in Sites Inventory: 108 in Highest Resource Areas (5% of Moderate RHNA) and 2,349 in High Resource Areas (119% of Moderate RHNA).
- 165 percent of the City's Above Moderate RHNA units located in High or Highest Resource areas.
 - Above Moderate RHNA = 5,126 units.
 - Above Moderate Units in Sites Inventory: 161 in Highest Resource Areas (3% of Above Moderate RHNA) and 8,294 in High Resource Areas (162% of Above Moderate RHNA).

The following table provides additional details on which types of units are located in different HCD/TCAC opportunity Map Areas:

SANTA CLARA HOUSING ELEMENT

Northern and Central Santa Clara

As shown in Figure 13.3-45, this area has large amounts of industrial, office and commercially designated land in the western portion of this area with existing neighborhoods to the east. The site inventory includes multifamily opportunities mostly in the Lawrence Station Area, Patrick Henry Drive Specific Plan Area, and the Tasman East Specific Plan Area where industrial and commercial land is being converted into mixed use residential areas near transit. The City assumes that accessory dwelling units (ADUs) will continue current trends and develop in single family areas throughout Northern Santa Clara. ADUs are an effective way to add lower income housing opportunities in existing single-family neighborhoods. ADUs will also help respond to higher rates of overcrowding in Northern Santa Clara. Figure 13.3-46 shows that the site inventory is mostly distributed in TCAC High Opportunity Areas.

FIGURE 13.3-45: NORTHERN AND CENTRAL SANTA CLARA SITES INVENTORY AND LAND USE

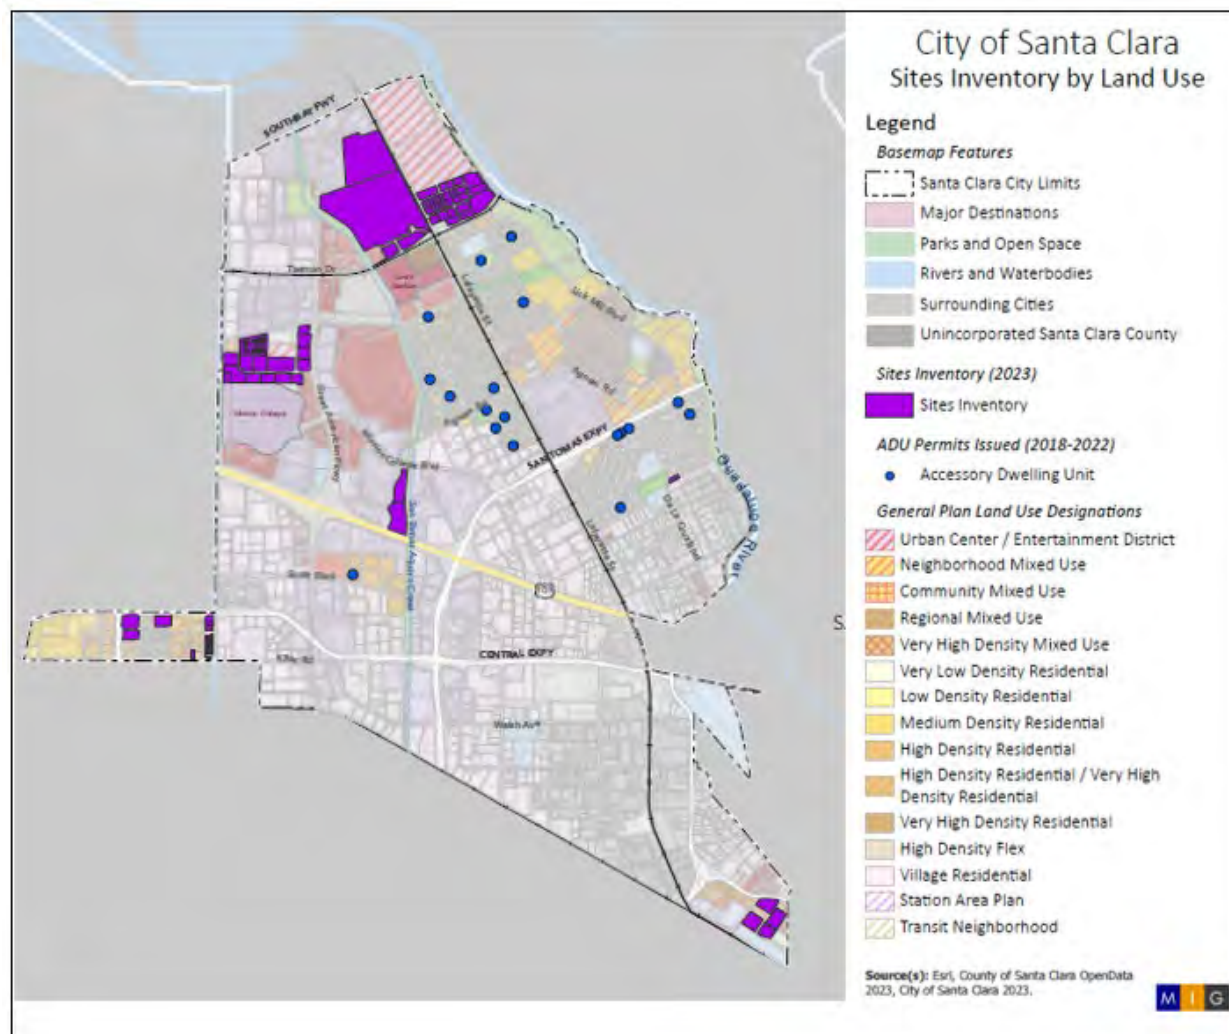

FIGURE 13.3-46: NORTHERN AND CENTRAL SANTA CLARA SITES INVENTORY AND TCAC OPPORTUNITY AREAS

SANTA CLARA HOUSING ELEMENT

Southern Santa Clara

The site inventory includes multifamily opportunities near transit, including along the El Camino Real corridor, and near the Santa Clara Station Area, and Downtown Santa Clara Precise Plan Area. The City assumes that accessory dwelling units (ADUs) will continue current trends and develop in single family areas throughout Southern Santa Clara. ADUs are an effective way to add lower income housing opportunities in existing single-family neighborhoods which are among the highest opportunity areas in the City. Figure 13.3-48 shows that the sites inventory is distributed across highest, high, and moderate resource TCAC High Opportunity Areas.

FIGURE 13.3-47: SOUTHERN SANTA CLARA SITE INVENTORY AND LAND USE

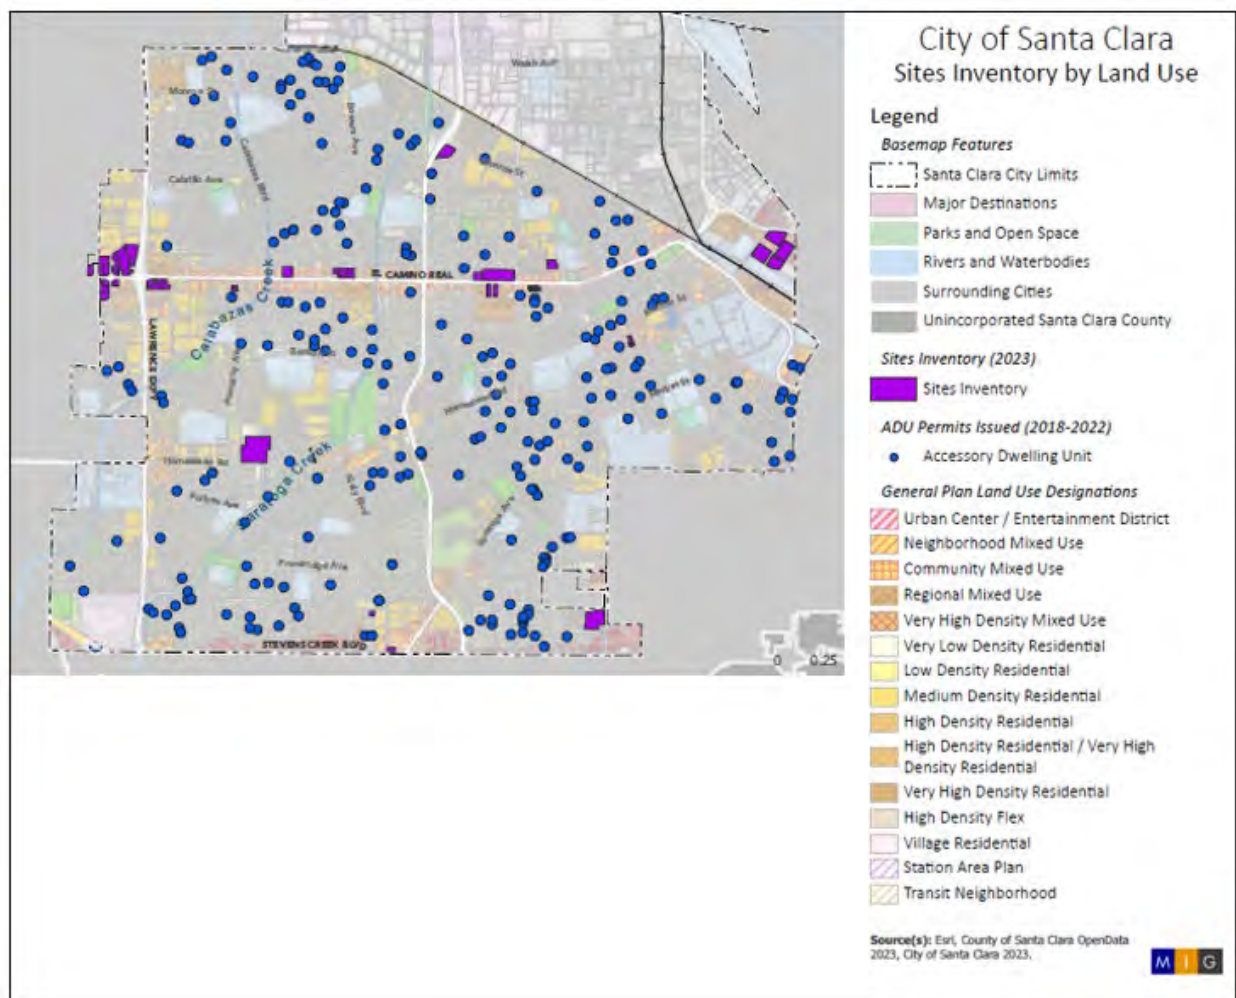

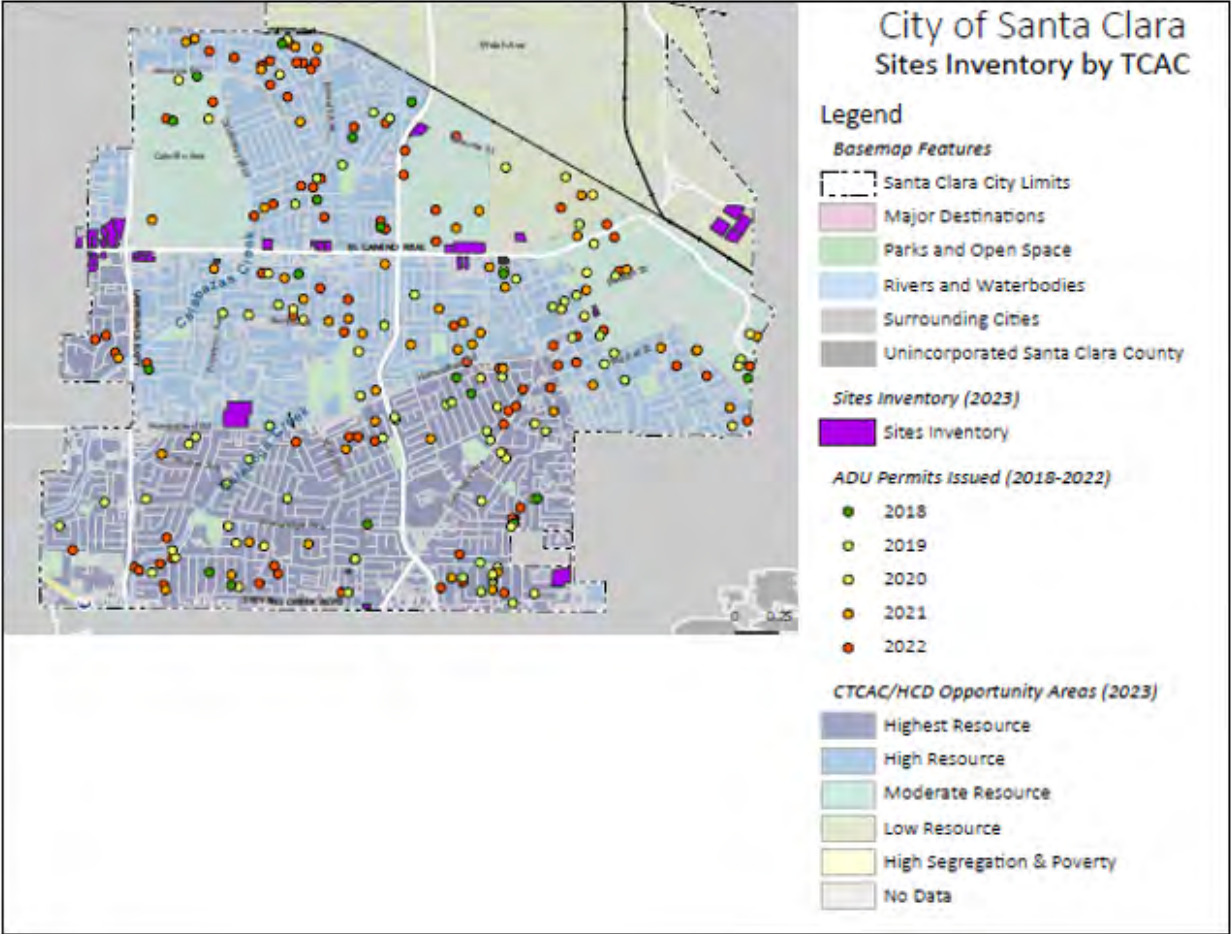

FIGURE 13.3-48: SOUTHERN SANTA CLARA SITES INVENTORY AND TCAC OPPORTUNITY AREAS

CONTRIBUTING FACTORS

Based on stakeholder outreach and the above analysis, the City has identified the following contributing factors to housing issues in Santa Clara. Table 13.3-23, prioritizes these contributing factors according to what would most limit or deny fair housing choice or access to opportunity. Meaningful actions listed in Chapter 13.2 that affirmatively further fair housing, promote housing opportunities throughout the community for protected classes, and address contributing factors are also included in the table.

Table 13.3-23: AFFH Meaningful Actions Matrix

Issues	Contributing Factors	Actions / Objectives (Specific Commitments)	Timeline / Metrics	Geographic Targeting	Priority (Low, Medium, High)
Segregation/Integration Patterns and Disparities in Access to Opportunity					
It can still be difficult to find sites for single room occupancy, emergency shelter, low barrier navigation centers, permanent supportive housing, and residential care facilities.	Zoning requirements that make developing a diversity of housing types difficult. Type and size of affordable housing units	Action 1: Provision of Variety of Housing Types Adopt the comprehensive Zoning Ordinance Update with revised provisions to allow a variety of housing types by right. Annually explore regional and state funding sources to build more housing opportunities for persons with disabilities and extremely low-income households. And through the provisions of a notice of funding availability (NOFA), prioritize loans for the development of extremely low and very low-income housing alternatives.	November 2023 and 2026	Citywide with additional funding prioritized in high and highest opportunity areas within a half mile of high frequency bus and rail corridors.	HIGH
It is difficult to find low- and moderate-income rental housing in the City’s highest opportunity areas.	South Santa Clara includes established single-family neighborhoods where home prices are out of reach for low- and moderate-income residents.	Action 7: Monitor ADU activity and report on the production of ADUs through the City’s Annual Progress Report (APR). If the pace of ADU production falls below the level necessary to achieve 392 ADUs during the 2023-2031 planning period, present a plan to City Council to remove barriers and/or further incentivize ADU production (e.g., through additional Zoning changes). Continue participating in the development and implementation of the Santa Clara County Planning Collaborative ADU Program, which will include a central online resource for making it easier to build ADUs, including an ADU Guidebook, gallery of ADU plans,	Annually and by end of 2025	South Santa Clara and Citywide	HIGH

Issues	Contributing Factors	Actions / Objectives (Specific Commitments)	Timeline / Metrics	Geographic Targeting	Priority (Low, Medium, High)
		examples/stories of real ADUs that have been built, and an ADU cost calculator. Action 5: Monitor preservation and conservation opportunities in and adjacent to South Santa Clara's high and highest TCAC opportunity areas.			
When housing is in short supply, tenants often do not report code violations for fear of retaliation and no cause eviction.	Private discrimination Code enforcement violations can arise when housing stock is not appropriately conserved and rehabilitated in a timely manner.	Action 7: Code Enforcement Program Establish multi-family residential housing inspection and educational programs that are self-funded and proactively respond to housing code violations. The City will also provide special attention to maintaining the stability of residential neighborhoods through development of minimum standards of allowed use of the City's streets, as well as maintenance of front and other yard areas visible from the public right-of-way.	By second half of 2024	Citywide	MEDIUM
Not all tenants and landlords are aware of their rights and responsibilities under state and local law which can result in the displacement of low-income tenants.	Fair housing issues exist everywhere but disproportionately impact low income households who may not have the resources to dispute unfair housing conditions or housing discrimination.	Action 16: Fair Housing Program Continue to provide fair housing services to residents including referrals, mediation, investigation of claims of discrimination, outreach and translated education materials, open house events to distribute information, and potentially setting a rent deposit limit Work with Project Sentinel to host two open house events per year and to distribute translated collateral in lower income census tracts explaining key landlord and tenant rights under current law	Ongoing and annually.	Citywide with proactive focus in census tracts with concentrations of persons with disabilities, disproportionate housing needs, and overcrowding.	HIGH
Transit station access is less robust in North and Central Santa Clara.	Industrial and commercial land uses in Central and North Santa Clara	Action 16: Fair Housing Program Market the Silicon Valley Hopper ride share service Citywide in Central and North Santa Clara once it becomes available in 2027 or later. This service will help connect lower income residents to major employment	2027	Citywide and Central and North Santa Clara	LOW

Issues	Contributing Factors	Actions / Objectives (Specific Commitments)	Timeline / Metrics	Geographic Targeting	Priority (Low, Medium, High)
		centers, VTA Light Rail, Caltrain and the future BART station.			
Place based investment is needed in lower income neighborhoods to increase access to opportunity.	Low income neighborhoods may require additional infrastructure to improve quality of life, access to transit, employment, health food, parks, and other resources.	<p>Action 16: Fair Housing Program</p> <p>By June 2027, complete bike and pedestrian improvements at various locations along Cabrillo Ave, Lafayette St, Monroe St, Royal Dr, Scott Blvd, and Warburton Ave in Central Santa Clara to improve safety and mobility. This area overlaps with an MTC Equity Priority Community and is considered a Low Opportunity Area by TCAC.</p> <p>By fall 2028, develop a CDBG Notice of Funding Availability that awards additional points to capital projects that improve quality of life and access to opportunities in HUD designated low-income and distressed areas of the City.</p>	June 2027 for bike pedestrian improvements. Fall 2028 for 2029 NOFA	MTC Equity Priority Communities, and HUD designated low-income and distressed areas of the City.	MEDIUM
Disproportionate Housing Needs					
Residents in Central Santa Clara and areas adjacent to central Santa Clara have lower income, lower access to opportunity, less access to parks, higher pollution, lower educational outcomes. Central Santa Clara has a mix of residents, but Hispanic/Latino residents are disproportionately concentrated in this area.	<p>Older residential development is surrounded by industrial uses</p> <p>Lack of place-based outreach about affordable housing opportunities elsewhere in the City</p> <p>Possible need for better language access</p>	<p>Actions 2 and 16;</p> <p>Increase mobility by conducting proactive in person outreach in relevant languages once per year about the City's affordable housing opportunities and resources such as landlord and tenant rights under state law and mediation services.</p>	Annually	Central Santa Clara and adjacent areas	HIGH
There are not enough licensed residential care facilities and shared housing sites to meet future demand for residents with developmental disabilities and seniors.	<p>Family members cannot care for adult children with developmental disabilities once caregivers are elderly.</p> <p>Funding is needed to acquire and maintain single family homes as licensed care facilities.</p>	<p>Action 1: Provision of Variety of Housing Types</p> <p>Increase the stock of extremely low and very low-income rental housing designed for persons with developmental disabilities by 35% from 56 in 2023 to 76 in 2030.</p> <p>Action 18: Shared Housing</p> <p>Evaluate the need for shared housing as part of the HUD Consolidated Plan Process.</p>	2025 Ongoing Prior to 2026	Citywide	MEDIUM

Issues	Contributing Factors	Actions / Objectives (Specific Commitments)	Timeline / Metrics	Geographic Targeting	Priority (Low, Medium, High)
	Multifamily development is not always designed to accommodate the needs of developmentally disabled tenants.	Continue to support the creation of new shared housing for lower income residents with developmental disabilities by including those project types in future Notices of Funding Availability.			
Displacement Risk					
Some landlords set very high deposits making it difficult for lower income tenants to secure housing or to relocate.	<p>Landlords seek to manage financial risk.</p> <p>Low income tenants are rent burdened in this high cost market making it hard to save and give up a large amount of money for a deposit.</p> <p>Deposits are sometimes not returned to tenants even if the unit is left in good condition.</p>	<p>Action 13: Residential Displacement</p> <p>By the end of 2025 analyze the feasibility of setting a rent deposit limit and present findings from that analysis to the Housing Commission and City Council.</p>	December 2025	Citywide	MEDIUM
Naturally occurring affordable housing stock is at risk of acquisition by for profit investors. Such acquisitions often result in direct displacement once rents are increased.	<p>As Santa Clara builds out and land values increase, there will be increasing pressure to reposition or redevelop older residential buildings.</p> <p>Rehabilitation can sometimes be more profitable than new construction.</p> <p>Nonprofit developers don't always have a fair chance to make offers to purchase such properties.</p>	<p>Action 6: Acquisition of Multi-Family Housing</p> <p>Create a database of naturally occurring affordable housing and annually monitor property sales and/or permit applications to identify conversion trends early.</p> <p>Present the findings on resources required to implement a Community Opportunity Purchase Act (COPA).</p> <p>Explore funding sources available at the regional, state, and federal levels to support affordable housing developers with acquisition/rehabilitation opportunities.</p> <p>Work with nonprofit entities to acquire properties and rehabilitate existing multi-family structures to be maintained as or converted into affordable rental housing. Prioritize assistance for housing that is within one half mile of rail transit stations or that is in a high or highest opportunity area according to TCAC.</p>	Early 2027 and annually	South Santa Clara and Citywide	MEDIUM

Issues	Contributing Factors	Actions / Objectives (Specific Commitments)	Timeline / Metrics	Geographic Targeting	Priority (Low, Medium, High)
Direct and indirect displacement can increase overcrowding, displacement, longer commutes and homelessness.	<p>Lower income households can experience displacement when new developments are built that are not affordable to existing residents and when regional housing prices rise faster than incomes.</p> <p>High security deposits can create barriers for lower income tenants moving between apartments.</p> <p>Landlords and Tenants may not be aware of their rights under state law.</p>	<p>Action 13: Residential Displacement</p> <p>Evaluate and provide recommendations to the City council on new programs and policies that prevent displacement such as no net loss, one year notification, and relocation benefits.</p> <p>Continue funding for dispute resolution services, the regional Homelessness Prevention System, and marketing below market rate rental and ownership opportunities.</p>	2025-2027	Citywide	HIGH
Cost Burden					
Affordable housing is not affordable enough. The City needs more extremely low and very low-income units to house low wage workers, seniors, persons with disabilities and a variety of unit sizes to accommodate singles, couples, single parent households, and large families.	<p>Market rate housing is out of reach for lower income residents.</p> <p>Seniors and households on fixed incomes cannot afford rent increases that are based on escalating HCD Income Limits.</p> <p>The City has limited funds for deep subsidies.</p> <p>Apartments for large families are less common than studios, one bedroom and two-bedroom apartments.</p>	<p>Action 1: Provision of Variety of Housing Types</p> <p>Increase the stock of income restricted three and four bedroom affordable rental housing units to serve large households in Santa Clara by 20% from 107 units in 2023 to 129 units in 2030.</p> <p>Increase the stock of extremely low and very low income rental housing designed for persons with developmental disabilities by 35% from 56 in 2023 to 76 in 2030.</p> <p>Action 2: Affordable Housing Ordinance</p> <p>Reassess the potential of updating the Citywide affordable ordinance to support deeper affordability requirements (5% very low income, 5% low income, and 5% moderate income) for rental and ownership projects. The City will also look into updating the definition of "moderate income" units from 120% AMI to 100% AMI or a percentage of market rents.</p> <p>Action 15: Homeownership for First-Time Homebuyers</p> <p>Determine the feasibility of keeping new Below Market Purchase homes deed restricted for 20-30 years vs. 5 years.</p>	By the end of 2024 and annually	Citywide with a proactive focus on landlords with multifamily sites located in high and highest opportunity census tracts.	HIGH

Issues	Contributing Factors	Actions / Objectives (Specific Commitments)	Timeline / Metrics	Geographic Targeting	Priority (Low, Medium, High)
		Action 14: Housing Choice Voucher Program Advocate for additional project and person-based vouchers for seniors and other special needs groups through partnerships with affordable housing developers and local and County housing authorities. Promote incentives that encourage landlords to accept Housing Choice Vouchers (HCV) and continue to refer households in need to the Housing Authority’s Housing Choice Voucher Application Portal.			
It is costly to build and operate affordable housing in Santa Clara County which limits the supply.	Affordable housing requires many sources of subsidies and coordination and partnership with local governments. High land costs make development more challenging.	Action 3: Affordable Housing Incentives and Facilitation Create an SB 35 Streamlining checklist, procedures Proactively encourage and facilitate development efforts and identify funding sources for developers and organizations in constructing affordable housing for lower income households particularly special needs groups. Conduct public outreach and issue a request for proposals to develop mixed income or 100% affordable housing on the vacant former site of the King’s Highway Motel on El Camino Real.	June 2022 March 2024, , and Annually December 2024	Citywide and proactive outreach in the neighborhood surrounding the King’s Highway Motel on El Camino Real.	HIGH
It is costly to build and operate affordable housing in Santa Clara County which limits the supply.	Much more funding is needed to realize the City’s RHNA goals for lower income units.	Action 12: Affordable Housing Funding Explore additional funding sources for the development of affordable housing and annually evaluate Notices of Funding Availability (NOFA) from state, federal, and regional programs.	End of 2025, and Annually	Citywide	MEDIUM

Issues	Contributing Factors	Actions / Objectives (Specific Commitments)	Timeline / Metrics	Geographic Targeting	Priority (Low, Medium, High)
It is difficult for low- and moderate-income households to buy a home or condo in Santa Clara	<p>Homeownership is cost prohibitive in much of the Bay Area including Santa Clara. Low- and moderate-income households are often shut out of the home ownership market.</p> <p>Below Market Purchase homes can be resold to market rate buyers after 5 years.</p>	<p>Action 15: Homeownership for First-Time Buyers</p> <p>Explore and present changes to the BMP program to keep homes affordable for longer than 5 years by requiring resale to income eligible homeowners. Promote homeownership for first time buyers through units that are income restricted, encourage program participation for households at all levels of income, and continue to promote homebuyers assistance programs through local and regional organizations.</p>	By the end of 2024	Citywide	MEDIUM
Substandard Conditions					
As housing stock ages, it requires maintenance, repairs, and upgrades to remain safe, healthy, cost efficient to operate, and to conserve water and energy.	Lower income households and affordable housing operators may not have the necessary funds to rehabilitate or upgrade housing to meet current needs.	<p>Action 4: Maintenance of Housing Stock</p> <p>Conduct outreach to single-family home residential care facilities to determine interest in and feasibility of including these properties in future CDBG/HOME Notices of Funding Availability to address rehabilitation and emergency repairs.</p> <p>Assist approximately 200 low, very low, and extremely low-income homeowners with rehabilitation and emergency repair assistance through loans and grants. Promote NOFA process for installation of HVAC improvements for sensitive populations especially seniors.</p>	2024	Citywide	MEDIUM
Income restricted housing can be at-risk of converting to market rate when subsidies or affordability requirements expire leaving less affordable housing options available.	Rising inflation, labor and material costs are making income restricted housing more costly to maintain and operate.	<p>Action 5: Preservation of Assisted and N.O.A.H. Rental Housing</p> <p>Extend the affordability of at risk low income housing units when funding is available by assisting with capital improvements to the property, establishing and maintaining contact with public and nonprofit agencies who may acquire at-risk units, and working with owners of at-risk housing to restructure loans to extend affordability restrictions.</p>	Annually	Citywide	MEDIUM

Issues	Contributing Factors	Actions / Objectives (Specific Commitments)	Timeline / Metrics	Geographic Targeting	Priority (Low, Medium, High)
When housing is in short supply, tenants are less likely to report code violations for fear of retaliation and eviction.	<p>Some property owners choose to defer maintenance costs to increase financial gain.</p> <p>Code enforcement violations can arise when housing stock is not appropriately conserved and rehabilitated in a timely manner.</p>	<p>Action 7: Code Enforcement Program</p> <p>Establish multi-family residential housing inspection and educational programs that are self-funded and proactively respond to housing code violations. The City will also provide special attention to maintaining the stability of residential neighborhoods through development of minimum standards of allowed use of the City’s streets, as well as maintenance of front and other yard areas visible from the public right-of-way.</p>	By second half of 2024	Citywide with a proactive focus in census tracts with concentrations of persons with disabilities, disproportionate housing needs, and overcrowding.	MEDIUM
Targeted Fair Housing Outreach					
A forum is needed to gather community input on challenges and solutions relating to fair housing, CDBD/HOME investments, homelessness, and neighborhood issues.	<p>Homelessness is caused by a complex set of factors and affects a wide variety of community members and requires coordination among a wide range of service providers.</p> <p>University students can have specific housing needs or living arrangements which are not always in line with existing neighborhood development.</p>	<p>Action 8: Neighborhood Relations Programs</p> <p>Form a Housing Commission to advise on CDBG and HOME grant administration for capital projects and community services, and on the City’s homelessness response efforts.</p> <p>Improve the maintenance of student-occupied homes to minimize impacts on neighborhoods surrounding Santa Clara University. As well as hold meetings with student tenants, landlords the University, and the City to address neighborhood issues and concerns. And ensure that student housing development is compatible with existing neighborhoods.</p>	Early 2023	Citywide and in neighborhoods surrounding Santa Clara University.	MEDIUM
Homelessness in Santa Clara has increased in recent years creating hardship for unhoused residents and quality of life impacts for the broader community.	<p>Insufficient affordable rental housing</p> <p>Insufficient interim and supportive housing</p> <p>Insufficient access to health care, behavioral health care, substance abuse programs, and other safety net social services.</p>	<p>Action 1: Provision of a Variety of Housing Types</p> <p>Increase access to interim housing units, rapid rehousing, and emergency shelter beds by 30% from 453 in 2023 to 589 in 2030.</p> <p>Action 17: Homeless Services</p> <p>Adopt and begin implementation of the City's Homelessness Response Plan. Continue to provide street outreach especially to at-risk youth, seniors, and persons with disabilities to connect residents with VISPDAT</p>	Late 2023	Citywide with proactive outreach at tent and RV/vehicle encampments	HIGH

Issues	Contributing Factors	Actions / Objectives (Specific Commitments)	Timeline / Metrics	Geographic Targeting	Priority (Low, Medium, High)
		assessment, emergency shelter, case management, and basic needs services			
Landlords and tenants are not always aware of recent state law changes related to source of income discrimination, no cause eviction, noticing and more.	Landlord tenant laws have changed in recent years. Landlords and tenants are not always educated about changes or know when they apply.	Action 16: Fair Housing Program Bring forward a proposal for City Council consideration to write an ordinance that requires landlords to provide a City approved multilingual brochure to all tenants with every lease signing that summarizes landlord and tenant rights under state law. If the ordinance is approved, conduct a series of educational workshops with local landlords and tenants.	December 2025	Citywide	MEDIUM
It is difficult for special needs residents to find and apply for affordable housing.	A regional “universal housing application” system is still under development. Housing applications are increasingly online, but a digital divide persists. Language access barriers, Nonprofit staff and social workers may require additional training to help clients navigate the complex web of housing providers.	Action 2 and 16: Plan in-person events to educate and assist seniors and special needs groups (including persons with limited English proficiency) on using the City’s housing application system and/or BAHFA’s regional housing portal once it is available in Santa Clara County Work with Project Sentinel to improve the City’s webpage to include more landlord/tenant rights, reasonable accommodation rights, resources and contact information in a format that is easily translatable using a web browser. Explore the creation of an ordinance that requires landlords to provide a City approved multilingual brochure to all tenants with every lease signing that summarizes landlord and tenant rights under state law. Plan outreach to help Evaluate the need for shared housing services, explore ways to increase access to senior housing, improve staff capacity to help seniors and special needs groups navigate the housing market and find subsidized housing, evaluate the need for shared housing services, and continue to support the creation of	Two times per year	Citywide	MEDIUM

Chapter 13.4

Housing Needs Assessment

Population and Employment Trends

Housing needs are influenced by population and employment trends. This section provides a summary of changes to the population size, age, and racial/ethnic composition of the City of Santa Clara. Moreover, to gain a deeper understanding of the housing needs in the City, an evaluation of the intersection of these demographic characteristics with housing statistics such as housing type and tenure, condition, cost, and vacancy provides the necessary bases for a proper housing needs assessment.

Current Population and Population Growth

Santa Clara, incorporated in 1852, is known as “The Mission City”, reflecting its place as an early California settlement dating to 1777. Santa Clara has a rich agricultural past that extends from that early settlement period almost two centuries forward. However, the post-World War II housing boom and just as significantly, the emergence of the electronics industry in the early 1950s, rapidly transformed the community. Between 1950 to 1990, the population of Santa Clara ballooned from 11,702 to 93,000. Today, Santa Clara lies in the heart of the Silicon Valley and continues to grow as the technology industry continues to expand.

From 2010 to 2020, Santa Clara’s population grew by approximately nine percent, from 116,468 to 127,000 residents. During the same period, Santa Clara County as a whole grew by 10 percent. The Association of Bay Area Governments (ABAG) growth forecasts predict a steady increase in population through 2040. From 2020 to 2040, ABAG estimates that the City’s population will grow by 25.6 percent, staying relatively on track with the countywide projected growth of 31.09 percent (Table 13.4-1).

Table 13.4-1: Population Growth and Projected Growth

	2010	2020	2040	% Change	% Change
				2010-2020	2020-2040

Source(s): US Census Bureau 2010, American Community Survey 2014-2019 5-year estimate

Age

Population age distribution serves as an important indicator of housing needs because housing needs and preferences change as individuals or households grow older. Young families tend to focus more on cost and the ability to become first-time homebuyers. Table 13.4-2 shows the age groups of Santa Clara residents. The largest age group in 2010 was residents aged 25 to 34 at 20 percent. In 2010, the second largest age group was residents aged 35 to 44, at 16 percent. This trend stayed consistent in 2019, with the largest percentage of residents falling in the 25 to 34 age group, at 21 percent. The second largest age group in 2019 was residents aged 35 to 44, at 16 percent.

The median age in Santa Clara is 33.9 years. Compared with the County (37.4 years) and the state (36.5 years), the City's population is younger. The large population of young adults means that demand for larger homes for families will likely continue to grow as residents move out of smaller homes and apartments and raise families.

Race and Ethnicity

Table 13.4-2 shows the racial/ethnic distribution of population in Santa Clara. Asian (43.2 percent) and White (non-Hispanic) (31.5 percent) residents make up most of the population. This breakdown is reflective of Santa Clara County, which is mostly Asian (36.5 percent) and White (31.5 percent) residents. The racial makeup of Santa Clara has stayed mostly consistent since 2010. The two largest racial groups in 2010 were Asian (38 percent) and White (36 percent). From 2010 to 2019, the White and Hispanic populations decreased while the Asian population increased, and the other racial groups stayed consistent. For example, the City of Santa Clara's Black or African American residents makes up 3 percent of the population, just over Santa Clara County's Black or African American population of 2.5 percent.

Employment

Santa Clara has 13,420 workers living within its borders who work across 13 major industrial sectors. Table 13.4-2 provides detailed employment information. Many Santa Clara residents work in professional, scientific, and management, and administrative and waste management services (19,573, 28 percent of total), reflects the predominant technology industry of Silicon Valley. The second largest industries are educational services, and health care and social assistance (19 percent) and manufacturing (19 percent). Between 2010 to 2019 the number of residents employed in educational services, health care, and social assistance and professional, scientific, and management, and administrative and waste management services increased, while the number of residents employed in manufacturing decreased.

These trends are important to understand, as certain industries are generally associated with lower median earnings. In the City, the median income for professional, scientific, and management, and administrative and waste management services is \$100,235. The median income for manufacturing is \$103,951, while the median income for educational services, health care, and social assistance is considerably lower at \$45,931. The 10 principal employers in Santa Clara are presented in Table 13.4-3.

Table 13.4-3: 10 Principal Employers, 2020

Employer	Number of Employees	Percentage
Applied Materials, Inc.	8,500	22.8%

Household Characteristics

The characteristics of a community's households impact the type and tenure of housing needed in that community. Household type, income levels, the presence of special needs populations, and other household traits are all factors that affect the housing needs of a community and the strategies that the community must deploy to meet those needs.

Characteristics for Santa Clara households are summarized in Table 13.4-4. The number of households in Santa Clara have increased by 2,346 from 42,323 in 2010 to 44,669 in 2019. Renter-

occupied households increased by 2,566 from 22,960 households in 2010 to 25,525 in 2019. Owner-occupied households decreased by 220 from 19,363 households in 2010 to 19,143 in 2019.

Source(s):

1 US Census Bureau, American Community Survey 2014-2019 5-year estimates

2 U.S. Department of Housing and Urban Development Comprehensive Housing Affordability Strategy (CHAS) Tables 2013-2017

Income

According to the 2019 American Community Survey (ACS), the median household income for the City of Santa Clara was \$126,006, which is slightly higher than the Santa Clara County median household income of \$124,055. Median household income differs by tenure; in the City, owner households have a significantly higher median income than renter households (a difference of \$47,283).

Census data estimates that 6.7 percent of the Santa Clara population lives in poverty, as defined by federal guidelines. This proportion is lower than in Santa Clara County, where 7.5 percent of residents live in poverty. Poverty thresholds vary by household type. In Santa Clara, the percentage of persons living in poverty is higher for Black residents, with 9.3 percent living in poverty, and much higher for female householders with no spouse present, at 16.7 percent.

SANTA CLARA HOUSING ELEMENT

Because poverty thresholds do not differ based on geographic differences, a better measure to understand income disparities can be to identify various percentages compared to the median income for a particular area. For housing planning and funding purposes, the Department of Housing and Urban Development (HUD) uses five income categories to evaluate housing need based on the Area Median Income (AMI) for the county:

- Extremely Low-Income Households earn 0-30 percent of AMI
- Very Low-Income Households earn 30-50 percent of AMI
- Low-Income Households earn 50-80 percent of AMI
- Moderate-Income Households earn 80-100 percent of AMI (HCD uses 120%)
- Above Moderate-Income Households earn over 100 percent of AMI (HCD uses 120%+)

Comprehensive Housing Affordability Strategy (CHAS) data provides special Census tabulations (developed for HUD) and calculates household income adjusted for family size and tenure. As shown in Table 13.4-4, in Santa Clara above moderate-income households make up the largest share of all households (57 percent), and extremely low-income households represent the second largest category (12.5 percent). Income also differs by tenure; as indicated in Table 13.4-4, more renter households are in the lower-income categories (0-80 percent AMI) than owner households.

Housing Overpayment

State and federal standards specify that households spending more than 30 percent of gross annual income on housing experience a housing cost burden. Housing cost burdens occur when housing costs increase faster than household income. When a household spends more than 30 percent of its income on housing costs, it has less disposable income for other necessities such as health care, child-care, and food. In the event of unexpected circumstances such as loss of employment or health problems, lower-income households with a housing cost burden are more likely to become homeless or double up with other households. In Santa Clara, 16.4 percent of households are overpaying for housing, with owner households and renter households overpaying 10 percent and 21 percent, respectively. Lower-income households have a much higher rate of overpayment at 49 percent whether it is an owner household or a renter household.

Extremely Low Income (ELI) Households

HCD defines ELI households as “a subset of very low income households. . . defined as 30 percent (or less) of the area median income”. As stated above, ELI households make up 12.5 percent of all households in Santa Clara with more renter households than owner households (16% and 7% respectively). Lower income households experience overpayment at a much higher rate compared to all households. While 16 percent of all households in Santa Clara experience overpayment, lower income households experience overpayment by almost 50 percent. Lower income owner households are overpaying by 36 percent while lower income renter households

are overpayment by 55 percent. Stakeholder outreach for the Housing Element and the City's Homelessness Taskforce in 2022 indicated that ELI housing is sorely needed by a wide variety of groups including persons with disabilities, elderly adults, and persons who are at risk of becoming homeless. Many stakeholders shared that "low-income housing" isn't affordable anymore as income limits continue to increase with area median income. More ELI and VLI units are needed to assist residents whose income is not keeping pace with HCD income limits and inflation.

The City of Santa Clara adopted the Affordable Housing Ordinance in 2018 which required rental projects of 10 or more units to provide at least 15 percent of the units at affordable rental prices to extremely low, very low, and low income households. These units must also remain a part of the affordable rental program for fifty-five years. The distribution of affordable units must average to a maximum of one hundred percent (100%) area median income so the number of ELI units that are produced through inclusionary housing is limited.

In 2019 the City selected HouseKeys, Inc. as the City's affordable housing administrator, to create a "one stop shop" for new affordable rental and ownership opportunities in Santa Clara and to help with compliance monitoring. The City also updates an Affordable Housing Resource Guide twice per year which provides resources for emergency housing support, organizations that provide rental assistance, homeowner programs, and a list of affordable housing properties throughout the City. A list of existing properties with ELI units is included below in Table 5. The 233 existing ELI income restricted units is far lower than the 5,462 ELI households in Santa Clara.

The City has also worked to develop actions that specifically address extremely low and very low-income households which may experience greater cost burden. Action 2 in the housing plan will look at updating the Citywide affordable ordinance to support deeper affordability requirements. Action 3 facilitates the development efforts for constructing affordable housing for lower income households particularly special needs groups. Action 6 explores funding sources to support affordable housing developers with acquiring and rehabilitating multi-family structures. Action 12 explores additional resources for providing funding for affordable housing. And Action 14 advocates for additional project and person-based vouchers for seniors and other special needs groups.

Table 13.4-5: Existing Properties with Extremely Low-Income Housing Units

Supportive and transitional housing types which often serve extremely low income households are both permitted within R1-8L single family zones, R1-6L single family zones, duplex zones, low density multiple-dwelling zones, moderate density multiple-dwelling zones, and medium density multiple-dwelling zones.

Housing Stock Characteristics

Housing Stock

In 2022, the State Department of Finance estimated that in 2020 there were 47,004 occupied housing units in the City. Compared to 2010, the City's housing stock has increased by 3,983 units. Most of the City's housing stock is made up of multi-family units (55 percent) followed by single family units (40 percent). Census data indicates that 0.2 percent of owner units and four percent (see Table 13.4-6) of rental units are vacant, suggesting that the City should continue to increase housing construction to accommodate residents.

Construction of both single family homes (attached and detached) and multi-family homes has grown in Santa Clara since 2010. However, while single family homes have only grown by 125 units between 2010 and 2019, multi-family homes have grown by 2,641 units, likely due to the technology industry boom and the influx of younger adults moving to the area for jobs.

Table 13.4-6: Housing Stock Characteristics by Tenure – 2020

<i>Housing Characteristic</i>	<i>Owner Households</i>	<i>Renter Households</i>	<i>All Households</i>
Total Housing Units	19,271 (41%)	26,792 (57%)	47,004
Single Family Detached	No data	No data	19,543 (42%)

California Department of Finance E-5 Population and Housing Estimates, 2021*

Overcrowding

In response to a mismatch between household income and housing costs in a community, some households may not be able to buy or rent housing that provides a reasonable level of privacy and space. According to both California and federal standards, a housing unit is considered overcrowded if it is occupied by more than one person per room (excluding kitchens, bathrooms, and halls). In Santa Clara, 6.2 percent of housing units are overcrowded, compared to 5.2 percent in the County. Overcrowding is much more prevalent in renter households (5.2 percent) than owner households (0.9 percent).

Housing Condition

The condition of housing stock can be an indicator of potential rehabilitation needs. Based upon observations and experiences of the Housing & Community Services Division, the City estimates that on average fewer than 10 housing units per year are in severe need of substantial rehabilitation due to housing conditions.

Housing Cost

The cost of housing in a community is directly correlated to the number of housing problems and affordability issues. High housing costs can price low-income families out of the market, cause extreme cost burdens, or force households into overcrowded or substandard conditions. The Santa Clara median home price according to 2019 ACS data is \$1,034,000. The median home price in Santa Clara County according to ACS data is \$984,000, \$50,00 lower than in the City.

According to the 2019 ACS, 57 percent of Santa Clara households are living in rental housing. Census data shows that the average rent in Santa Clara is \$2,396 per month, with most (25.7 percent) paying between \$2,000 and \$2,499 in rent. Table 13.4-6 shows that the HUD-determined fair market rents for the City of Santa Clara fall within the range of the rents within the County. Therefore, the rental rates in Santa Clara generally are less than the HUD-determined fair market rents, indicating that certain parts of Santa Clara County are potentially more expensive than local rents.

Table 13.4-7: Fair Market Rents in Santa Clara County

<i>Year</i>	<i>Efficiency</i>	<i>One-Bedroom</i>	<i>Two-Bedroom</i>	<i>Three-Bedroom</i>	<i>Four-Bedroom</i>
FY 2020 FMR	\$2,103	\$2,458	\$2,970	\$3,943	\$4,525

Source(s): FY2020 Fair Market Rents. U.S. Department of Housing and Urban Development (HUD)

According to Costar, the vacancy rate in Santa Clara in Q3 2022 was lower at 3.5% while the larger San Jose metro area's vacancy was 4.9%. In Q3 2022, vacancy for 3-bedroom units was much lower at 2.9% while vacancy for smaller unit types was closer to the overall average at 3.5%. Average effective rent per unit in Santa Clara trend higher at \$3,094 compared with \$2,880 for the larger San Jose metro area.

Special Housing Needs

Housing-element law requires local governments to include an analysis of housing needs for residents in specific special needs groups and to address resources available to address these needs. The following analysis confirms public comments received indicating a particular need for more extremely low and very low income rental housing options for persons with disabilities, large families, seniors, and people experiencing homelessness. Based on the scale of this identified need, additional resources, beyond those currently available, will be required to realize meaningful increases in housing for people with special needs. The City's Housing Plan (Chapter 2), includes actions and objectives that will help address the gaps in resources to meet these needs.

Table 13.4-9: Special Needs Groups

<i>Special Needs Category</i>	<i>Count</i>	<i>Percent</i>
Persons with Disabilities ¹	8,966	7% of residents
Persons with Developmental Disabilities ²	3,246	2.7% of residents

1. US Census Bureau, American Community Survey 2015-2019 5-year estimates. There is no Census occupation or industry that discretely identifies an estimate for the number of farmworkers in the City of Santa Clara. This figure comes from the civilian employed population (16 years and over) in the industry that includes: agriculture, forestry, fishing and hunting, and mining.

2. California Department of Developmental Services, 2020, reflects the DDS consumer count by CA ZIP Codes 95050, 95051, 95052, 95053, 95054, 95055, 95056

3. Santa Clara County: Annual Point in Time Count Report

Persons with Disabilities including persons with Developmental Disabilities

Disabled residents face housing access and safety challenges. Disabled people, in many cases, are of limited incomes and often receive Social Security income only. As such, most of their monthly income is often devoted to housing costs. In addition, disabled persons may face difficulty finding accessible housing (housing that is made accessible to people with disabilities through the positioning of appliances and fixtures, the heights of installations and cabinets, layout of unit to facilitate wheelchair movement, etc.) because of the limited number of such units.

The following is a summary of the number of people in Santa Clara with different types of disabilities according to the 2019 ACS:

Ambulatory Difficulty	4,234
Independent Living Difficulty	3,372
Cognitive Difficulty	3,246
Self-care difficulty	1,885
Vision Difficulty	1,557

According to the 2019 ACS there are 8,966 residents with one or more of the above listed types of disabilities in Santa Clara, representing seven percent of residents. Most residents with a disability are 75 and older (47.1 percent), followed by those 65 to 74 years old (18 percent). The most commonly occurring disability amongst seniors 65 and older was an independent living difficulty, experienced by 14.5 percent of Santa Clara's seniors. The most common disabilities for people 35-64 years old was ambulatory difficulty followed by cognitive difficulty.

SANTA CLARA HOUSING ELEMENT

For those with a developmental disability, the majority reside in the home of a parent, guardian, or family member (78 percent). The second most common living situation for individuals with a developmental disability is a community care facility (9.6 percent).

Housing Choices is a local nonprofit focused on enhancing the lives of people with developmental and other disabilities and their families by creating and supporting quality, affordable housing opportunities. Housing Choices provided the following comments relating to the needs of developmentally disabled residents in Santa Clara County:

- Between September 2015 and June 2021, the Department of Developmental Services reported that the number of Santa Clara County residents with developmental disabilities age 62 and older grew by 35 percent. This increase is generally attributable to gains in life span which likely means that more adults with developmental disabilities will outlive their parents and family members who are by far the single largest source of housing for people with developmental disabilities in the City of Santa Clara.
- Because older adults currently occupying a licensed facility in Santa Clara County are living longer, this reduced rate of occupant turnover, coupled with closing facilities, will make it more difficult for middle-aged and senior adults who have been living with aging parents in the City of Santa Clara to transition to licensed care when their parents pass away. Notwithstanding 20 percent growth in Santa Clara County's total population of adults with developmental disabilities, the Department of Developmental Services has documented a 15 percent decline in the age group 42 to 51 in Santa Clara County between September 2015 and June 2021. In light of gains in life expectancy, this loss can reasonably be attributed to displacement from the county because of the lack of residential living options (either licensed facilities or affordable housing) when an elderly family caregiver passes away or becomes unable to house and care for the adult. Displacement takes a particular toll on adults with developmental disabilities who depend on familiarity with transit routes and shopping and services, as well as support from community-based services and informal networks built up over years of living in Santa Clara.

Santa Clara has responded to the need for community care facilities and there are several group homes and independent living options for Santa Clara residents with disabilities, shown in table 10 below. Action 18 in the housing plan will explore ways to increase special needs housing and support the creation of new shared housing options for residents with disabilities. Table 13.3-10 indicates there are only 56 units of income restricted housing set aside for persons with developmental disabilities in the Santa Clara area. This represents approximately 1.7% of the 3,246 people who have cognitive disabilities in Santa Clara. To meet rising demand, a 35% increase would require the construction of 76 new housing units for this special needs group. Given the scale of this need, multifamily housing options would be needed.

Source: City of Santa Clara:

Elderly (65+ years)

Many senior-headed households have special needs due to their relatively low incomes, disabilities or limitations, and dependency needs. Specifically, many people aged 65 years and older live alone and may have difficulty maintaining their homes, are usually retired, and living on a limited income, and are more likely to have high health care costs and rely on public transportation, especially those with disabilities. The limited income of many elderly persons often makes it difficult for them to find affordable housing. There are 3,249 households headed by elderly residents, representing 7.2 percent of total households in Santa Clara. Of all the age groups in Santa Clara, elderly residents experience poverty at a lower rate (7.8 percent) than those aged 18 to 34 (8.8 percent) which is counter to trends in other cities where elderly residents are more likely to be low income. Seniors may experience specific housing needs and require special assistance in their living situations. The City of Santa Clara has several housing properties dedicated to seniors, including options for seniors who are more active and those who require assisted living. These properties are detailed in Table 13.4-11 below. Table 13.4-11 indicates that there are only 736 housing units for lower income seniors in Santa Clara. This represents approximately 13% of the 5,645 extremely low and very low-income seniors in Santa Clara as summarized in Table 13.4-13. The scale of need for senior housing indicates that more multifamily affordable rental housing with varying levels of support services will be needed. A twenty percent increase would translate into 148 new affordable units for seniors. To create

SANTA CLARA
HOUSING ELEMENT

deeply affordable service enriched senior housing, additional sources of federal funding and vouchers will be needed.

Source: U.S. Department of Housing and Urban Development (HUD), Comprehensive Housing Affordability Strategy (CHAS) ACS tabulation, 2013-2017 release

Notes: For this table, senior households are those with a householder who is aged 62 or older. Cost burden is the ratio of housing costs to household income. For renters, housing cost is gross rent (contract rent plus utilities). For owners, housing cost is “select monthly owner costs”, which includes mortgage payment, utilities, association fees, insurance, and real estate taxes. HUD defines cost-burdened households as those whose monthly housing costs exceed 30% of monthly income, while severely cost-burdened households are those whose monthly housing costs exceed 50% of monthly income.

Large Households (5+ members)

Large households, defined by HCD as households containing five or more persons, have special housing needs due to the limited availability of adequately sized, affordable housing units. Larger units can be very expensive; as such, large households are often forced to reside in smaller, less expensive units or double-up with other families or extended families to save on housing costs, both of which may result in unit overcrowding. There are 4,253 large households in Santa Clara representing 9.5 percent of all households. A larger percentage of renter households (5 percent) are defined as large households as compared to owner households (4.5 percent).

In Santa Clara, 3.2 percent of families are living in poverty. For large households with five or six family members 2.7 percent live in poverty, this rate goes up drastically for families with seven or more people (7.1 percent). Table 12 below shows household size by tenure in Santa Clara. Two-person households make up the largest number of households with 32.5% being owner households and 34% being renter households.

The City's affordable rental housing portfolio contains 99 three-bedroom units and 8 four-bedroom units for larger households with five or more persons in Santa Clara. This represents approximately 4.7% of the 2,257 large families who rent in Santa Clara as summarized in Table 13.4-14. Data is not available on how many of these large households are lower income, but community outreach has indicated there is a need for larger affordable housing units in Santa Clara as most developments tend to build studios, one- and two-bedroom units. A twenty percent increase would translate into 21 new three- or four-bedroom units.

Table 13.4-14: Household Size by Tenure

<i>Household Size</i>	<i>Owners</i>		<i>Renters</i>		<i>Total</i>

Farmworkers

Farmworkers are considered a special housing needs group due to their limited income and the often-unstable nature of their employment. While many traditional affordable housing programs and policies will assist farmworkers, the unique needs and circumstances for agricultural workers need to be considered and explored in the City's Housing Element.

Although maps from the State of California Department of Conservation Farmland Mapping and Monitoring Program show no farmland in Santa Clara, agriculture continues to play a role in the regional economy, including in parts of Santa Clara County.

There is no Census occupation or industry category that discretely identifies an estimated number of farmworkers in the City of Santa Clara. However, the Census does estimate that there are 122 residents working in the industry category that includes agriculture, forestry, fishing and hunting, and mining. Assuming all those residents are farmworkers, that represents approximately 0.2 percent of the City's working population.

Since 2002, there has been a decline in the total number of farmworkers in Santa Clara County and there has also been a shift to a more permanent workforce for many farms in Santa Clara County, which has shifted the bulk of need from seasonal housing for migrant workers to permanently affordable housing for lower income working families.

Table 13.4-15: Farm Operations and Farm Labor in Santa Clara County

<i>Hired Farmworker</i>	<i>2002</i>	<i>2007</i>	<i>2012</i>	<i>2017</i>
Permanent	1,696	2,842	2,243	2,418
Seasonal	3,760	2,747	1,994	1,757
Total	5,456	5,589	4,237	4,175

Source: U.S. Department of Agriculture, Census of Farmworkers (2002, 2007, 2012, 2017), Table 7: Hired Farm Labor

Note: farmworkers are considered seasonal if they work on a farm less than 150 days in a year, while farm workers who work on a farm more than 150 days in a year are considered to be permanent workers for that farm.

Farmworkers in the Bay Area are generally categorized as either:

1. **Permanent Residents.** The majority of farmworkers in Santa Clara County are permanent residents. Depending on their work and family circumstances, they may require housing which can accommodate families.
2. **Migrant Farmworkers.** Migrant farmworkers perform agricultural labor on a seasonal basis and tend to need housing in the form of single occupancy rooms, bunkhouses, or dormitory style living.
3. **H-2A Visa Workers.** These are farmworkers who enter under a federal guest worker program for limited number of months (no more than 10) before they return to their

SANTA CLARA HOUSING ELEMENT

country of origin. H-2A visa workers require a sponsoring employer, who provides housing, meals, and transportation to the job site. H-2A visa workers can share homes, apartments, or be housed in bunkhouses, dormitories, or single occupancy rooms. Since very few bunkhouses exist, the employers of H-2A workers compete with permanent farmworkers for scarce affordable homes and apartments.

In Santa Clara, for the 2019-20 school year, there were 46 reported students of migrant workers. Since the 2016-17 school year, the trend for Santa Clara, the County, and the Bay Area shows a decline in the number of students of migrant workers.

Table 13.4-16: Migrant Worker Student Population

<i>Geography</i>	<i>2016-17</i>	<i>2017-18</i>	<i>2018-19</i>	<i>2019-20</i>
Santa Clara	109	90	91	46
Santa Clara County	978	732	645	492
Bay Area	4,630	4,607	4,075	3,976

Note: Data used for this table was obtained at the school site level, matched to a file containing school locations, geocoded and assigned to jurisdiction, and finally summarized by geography.

Due to the low number of agricultural workers in the City, the housing needs of migrant workers and/or farmworkers can be met through the City's general affordable housing programs. The City conducted specific focus group outreach to farmworker advocate groups in the City who identified that there may be a need for multi-generational housing options.

Female-Headed Households

Single-parent households require special consideration and assistance because of the greater need for day care, health care, and other services. In particular, female-headed households with children tend to have lower incomes and a greater need for affordable housing and accessible daycare and other supportive services. The relatively low incomes earned by female-headed households, combined with the increased need for supportive services, severely limit the housing options available to them. There are 3,571 female-headed households in Santa Clara, representing 7.9 percent of households. A total of 16.7 percent of female-headed households live in poverty, a much higher percentage than all households living in poverty at 6.7 percent. The largest household type in Santa Clara is married couple household (55 percent), followed by householders living alone (22 percent), and male-headed households (4.3 percent).

People Experiencing Homelessness

Population estimates for people experiencing homelessness is very difficult to quantify. Census information is often unreliable due to the difficulty of completely counting a population without

permanent residences. Given this impediment, local estimates of the homeless and anecdotal information are often the sources of population numbers. In 2022, the regional point in time count identified a total of 440 people who were unsheltered or living in emergency shelters in the City of Santa Clara. Data from Santa Clara County Office of Supportive Housing identified 769 clients in 2021. These individuals are affiliated with the City of Santa Clara, had an emergency shelter, transitional housing, or outreach enrollment during, or took a Vulnerability Index Service Prioritization Decision Assistance Tool in 2021. Of these identified clients, 58 percent were male, 42 percent were female. The most individuals indicated they were between 55 to 64 years old followed by those 25 to 44 years old. Over half of individuals (52%) identified as non-Hispanic White and 46 percent identified as Hispanic/Latinx. Of these 769 homeless clients, 43 indicated they were veterans, 453 reported to have a disabling condition, 384 had a chronically homeless status, 264 had a self-reported domestic violence background, and 82 clients self-reported currently fleeing domestic violence. In 2019 there were 326 people counted. During this same time period, Santa Clara County's point in time count increased by 3 percent. Comparing point in time count between 2019 and 2022, the number of unsheltered individuals in the City of Santa Clara rose from 264 to 375 and the number of sheltered individuals rose from 62 to 65. This suggests that the City of Santa Clara's overall increase in homelessness was due primarily to the growth in unsheltered homeless. Housing types for sheltered homeless individuals from 2021 can be found in table 13 below.

Table 13.4-17: Housing Inventory Count for Sheltered Individuals

<i>Project Type</i>	<i>2021 Housing Inventory Count</i>
Emergency Shelter	10
Transitional Housing	65
Rapid Rehousing	151
Permanent Supportive Housing	101
Other Permanent Housing	126
Grand Total	453

Source: 2021 Housing Inventory Count (HIC) Data for City of Santa Clara

The location of homeless encampments and RV parking shifts regularly. There are concentrations of overnight RV parking in the northern part of the City near Bassett Street, Hope Drive, Memorex Drive, and Richard Avenue. There are smaller concentrations in other parts of the City near De La Cruz Boulevard and Martin Avenue, Saratoga Avenue and Los Padres Boulevard, and certain portions of Stevens Creek Boulevard.

For encampments, there are concentrations on Saratoga Creek from Forbes Avenue, north along the creek to El Camino Real. Several segments of El Camino Real include unhoused residents camping near vacant buildings. On the north side of the City, the Guadalupe River trail from Highway 237 down to Trimble Road has a concentration of homeless encampments. Lastly, Calabazas Creek from Tasman Drive to Highway 101 has historically had several encampments.

SANTA CLARA HOUSING ELEMENT

Generally, encampments are located in areas adjacent to waterways or near unoccupied/vacant buildings. Action 17 in the housing plan chapter ensures that the City adopts and implements the Homelessness Response Plan by early 2023.

Table 13.4-18 lists nine sites in the City where persons in need of emergency shelter can seek shelter and other assistance.

Table 13.4-18: Emergency Housing Providers in the City of Santa Clara

<i>Provider</i>	<i>Target Population</i>	<i>Capacity/ Housing Type</i>
Bill Wilson Center, Bill Wilson House	Homeless teenagers	Six-person group home
Bill Wilson Center, Homeless Teen Parent Project	Homeless teen mothers and dependent children	Six-person group home and four transitional apartments
Bill Wilson Center, Runaway Youth Shelter	Runaway, homeless and other troubled youth	Short-term transitional
Bill Wilson Center, Transitional Housing for Foster Home Teenage Girls	Teenage girls	Six-person group home
Bill Wilson Center, Transitional Housing for Homeless Teens	Homeless teenagers	Six-person group home
HomeFirst, Sobrato Family Living Center	Homeless families	33-unit transitional
HomeFirst, Sobrato Family Living Center II	Homeless families	10-unit transitional and eight-unit permanent
Charities Housing Homesafe Santa Clara	Survivors of domestic violence	24-unit transitional
Silicon Valley Independence Living Center	Persons with disabilities	Four-bedroom transitional

Emergency Shelters are currently a permitted use in the ML Light Industrial district, allowed without discretionary review, provided that the existing number of shelter beds is less than required in the most recent annual count of homeless persons residing within the city. If there are more beds that required by the most recent annual count of homeless persons, then Emergency Shelters are a conditional use.

The total acreage in the ML – Light Industrial district is 1,413 acres, with parcel sizes averaging 2.24 acres in size. Vacancy rates for R&D buildings in Santa Clara currently stand at 10%, and a number of industrial buildings are available for re-use as emergency shelters.

Frequent transportation options (15 minute headways) within the industrial areas of Santa Clara include the Route 57 bus that runs up Bowers Avenue, which connects to the goods and services of El Camino Real, and the VTA light rail, with connections to amenities and services in North Sunnyvale, downtown Mountain View and downtown San Jose.

Portions of the area zoned ML Light Industrial are located within the Airport Influence Area of the San Jose International Airport and are subject to noise from aircraft overflights.

Existing constraints to the permitting of emergency shelters are proposed to be removed as part of the Zoning Ordinance update with emergency shelters permitted by-right subject to the following objective development standards:

1. A minimum distance of three hundred (300) feet shall be maintained from any other emergency shelter.
2. The maximum stay at the facility shall not exceed one hundred eighty (180) total days in a three hundred sixty-five (365)-day period.
3. On-site client waiting and intake areas shall be located inside the building and shall be screened from public and private property where feasible. If not feasible, an exterior waiting area shall be provided which:
 - (A) Contains a minimum of ten square feet per bed provided at the facility; and
 - (B) Shall be in a location not adjacent to the public right-of-way; and
 - (C) Shall be visibly separated from public view by a minimum six-foot tall visual screening.
4. Hours of intake shall be between the hours of 5:00 P.M. to 9:00 P.M. Overnight occupants shall not be permitted to leave the facility on foot before 7:00 A.M. the following morning.
6. A minimum of one employee per fifteen (15) beds, in addition to security personnel, shall be on duty and remain on site during operational hours whenever occupants are on the site.
7. Security personnel shall be provided during operational hours whenever clients are on the site or when people are waiting outside the facility.
8. Exterior lighting shall be provided for the entire outdoor area of the site. Exterior lighting shall be stationary, directed away from adjacent properties and public rights-of-way, and be of an intensity compatible with the neighborhood.
9. Off-street parking shall be provided at the rate of one parking space per emergency shelter employee or as set forth in Chapter [18.74](#) SCCC, whichever is least restrictive.
10. The shelter may provide the following services and facilities to occupants in a designated area separate from the sleeping areas:
 - (A) A recreation area either inside or outside the shelter. If located outside, the area shall be screened from public view.

SANTA CLARA HOUSING ELEMENT

- (B) A counseling center for job placement, educational, health care, legal, or mental health services.
 - (C) Laundry facilities to serve the number of occupants at the shelter.
 - (D) One or more kitchens for the preparation of meals.
 - (E) Dining hall.
 - (F) Client storage areas (i.e., for the overnight storage of bicycles and personal items).
 - (G) Similar services supporting the needs of homeless occupants.
11. The operator of the facility shall provide, at the City's request, an annual report of the use of the facility that demonstrates that the facility is in compliance with the requirements of this chapter and the development standards for the use.
 12. Deliveries of goods to the shelter shall only be made within hours that are allowed by this Code.
 13. The facility shall not generate lighting at levels adversely affecting surrounding properties.
 14. Professional and on-site management, with experience managing emergency shelters, shall be provided at all times.
 15. The facility shall develop and implement an emergency preparedness plan, including a shelter-in-place plan.

These objective standards are consistent with the allowable objective development standards as indicated in HCDs Zoning for a Variety of Housing Types guidance document.

The key constraint is the current permitting process, which limits the number of beds that can be permitted by right in the City of Santa Clara based on the prior year's count of people experiencing homelessness. That constraint is proposed to be removed as a part of the Zoning Ordinance Update, and the availability of potential locations for emergency shelters will be expanded with Emergency Shelters allowed by right in the As a part of the Zoning Code Update (Action 9), the City is proposing to allow Emergency Shelters by right in the R-3 and R-4 Residential districts, the C-C and C-R Commercial districts, and the MU-VHD Mixed Use district. This would expand the total acreage available for emergency shelters to 1,599 acres and would potentially allow emergency shelters along commercial corridors such as Stevens Creek Boulevard, proximate to amenities and transit.

Additionally, Emergency Shelters would be allowed in the LI – Light Industrial and PQP – Public/Quasi-Public districts, subject to the approval of a Minor Use Permit heard by the Director of Community Development.

In addition to the various local resources for people experiencing homelessness and on the verge of experiencing homelessness there is a County wide Emergency Assistance Network available to anyone living in Santa Clara County. Organizations through this network offer one-time rent and mortgage payment assistance, -move -in costs for rental deposits, -information and referrals, food distributions, case management, job training, employment assistance, low-income utility programs, after school care, Veterans assistance, temporary shelter, and housing search assistance.

Energy Conservation Opportunities

The Housing Element should analyze opportunities for energy conservation in residential development. Energy-related housing costs can directly impact the affordability of housing. While State building code standards contain mandatory energy efficiency requirements for new development, the City and utility providers are also important resources to encourage and facilitate energy conservation and to help residents minimize energy-related expenses. Policies addressing climate change and energy conservation are integrated into the Santa Clara General Plan.

Santa Clara has two solar systems at City facilities, which have capacity to produce up to 500 kilowatts (kW) of energy combined. Pursuant to the City's Climate Action Plan (CAP), five more solar photovoltaic (PV) projects will be installed with a total capacity of three to five megawatts (MW). To encourage residential PV units, Silicon Valley Power (SVP) offers a Neighborhood Solar Program which matches resident and business contributions to the fund for nonprofit solar facilities in the City. SVP also provides rebates for local businesses and residents for solar electric system installation and expedited solar system permitting. SVP offers free home energy audits to

SANTA CLARA HOUSING ELEMENT

residents to help identify energy efficiency improvements, and rebates, including energy efficient appliances, insulation, lighting, cooling, and process changes. The City is also working with the regional energy supplier PG&E to encourage residents and businesses to retrofit their natural gas systems.

At-Risk Housing Analyses

State housing law requires an inventory and analysis of government-assisted dwelling units eligible for conversion from lower income housing to market rate housing during the next 10 years. Reasons for this conversion may include expiration of subsidies, mortgage pre-payments or pay-offs, and concurrent expiration of affordability restrictions. Currently, four affordable housing properties in Santa Clara are at risk of converting to market rate housing in the next 10 years as shown in table 15 below.

Table 13.4-20: At-Risk Housing

Source(s): At Risk-Housing Report for City of Santa Clara, CHPC 2022

* zoned as single family residences

**Currently being refinanced with a possible extension of the affordability period

Transferring ownership of the affordable units to a nonprofit housing organization is a viable way to preserve affordable housing for the long term and increase the number of government resources available to the project. The City will seek to establish deeper relationships with non-profit affordable housing developers and supportive services providers (qualified entities) to identify and preserve at risk properties for preservation. Several qualified entities, including the Sobrato Family Foundation, BRIDGE Housing, and MidPen Housing have shared their interest with the City in acquisition and/or preservation of properties for affordable housing.

In Santa Clara, the estimated market value for the affordable units in the two multi-family at-risk projects is evaluated in Table 13.4-21 below. The current total market value for the 34 at-risk units in Casa del Maestro Apartments (2)and Sobrato Family Living Center (32) is estimated to be \$11,313,922. The estimated replacement cost for the same units is approximately \$13,005,000, with

additional rent subsidies of \$147,242 per year of deed restricted affordability, or \$8,098,306 for the typical 55-year affordability requirement.

In order to assess the level of risk of a project converting to market rate, the expiration date of affordability covenants and the ownership structure of the project is considered. Nonprofit ownership generally indicates a lower likelihood of conversion than for-profit ownership.

Because Casa del Maestro Apartments and Sobrato Family Living Center are both owned/operated by nonprofit organizations and the expiration date of affordability covenants for both projects are at or toward the end of the 6th Housing Element Cycle, they are considered to be at low risk for conversion to market rate.

The two at-risk units at Casa del Maestro are part of a larger development that includes 20 other affordable units that will remain restricted until June 25, 2057.

The risk of the Sobrato Family Living Center’s 32 affordable units converting to market rate is further reduced because there are provisions in their affordability agreement that would continue to require income limitations and rent restrictions beyond the end of their current 30-year affordability term unless the owner was able to demonstrate that the project was no longer economically feasible (revenue equal to or exceeds operating expenses) or if they provided an equal number of equivalent units off-site without public financial assistance. In addition to receiving local funding (HomeFirst), this project has received federal funding that also requires the project to remain affordable.

Additionally, Sobrato Family Living Center is currently seeking to rehabilitate its units. Any local contribution to their proposed rehabilitation work would include a requirement for modification of their agreement to extend the affordability period of their project. Other properties with affordable units seeking similar assistance would be required to do the same. HCD administers programs to finance the acquisition of at-risk projects, and there are low-income housing tax credits, and bond financing. Locally, there are HUD CDBG rehabilitation funds.

Two small at-risk properties owned by Momentum for Mental Health are operated as supportive housing for people dealing with mental health concerns, and as a smaller operation valuation comparable would be similar to a single-family residence, and the replacement cost would mirror the cost of single-family construction. However, the replacement strategy for the smaller projects would most likely be a purchase and rehabilitation project. For a five to six room unit the costs would be approximately \$1,200,000 to \$1,700,000 for purchase and rehabilitation or construction. Momentum for Mental Health is a non-profit organization and will likely not be selling the properties in the coming years and will seek to refinance and rehabilitate the projects and seek subsidies to extend the affordability of the projects.

1. Per unit cost: 1-BR, \$340,000; 2-BR, \$510,000; 3-BR, \$595,000
2. Additional subsidies would be required of approximately \$200 per bedroom (2020 Income Limits – Fair Market Rent)

Coastal Zone

The City of Santa Clara is not in a coastal zone and therefore is not subject to the requirements of Government Code 65588 (c) and (d).

Projected Housing Need (RHNA)

Housing Element law requires a quantification of each jurisdiction's share of the regional housing need as established in the RHNA-Plan prepared by the jurisdiction's council of governments. The California Department of Housing and Community Development (HCD), in conjunction with the ABAG, determine a projected housing need for the region covered by ABAG. This share, known as the Regional Housing Needs Allocation (RHNA), is 441,176 new housing units for the 2023-2031 planning period throughout the ABAG region. ABAG has, in turn, allocated this share among its constituent jurisdictions, distributing to each its own RHNA divided along income levels. The City of Santa Clara has a RHNA of 11,632 housing units to accommodate in the housing element period. The income distribution is as shown in Table 13.4-18.

Table 13.4-23: Regional Housing Needs Allocation 2023-2031

<i>Income Group</i>	<i>% of County AMI</i>	<i>Number of Units Allocated</i>	<i>Percent of Total Allocation</i>
Very Low ¹	<50%	2,872	25%
Low	50-80%	1,653	14%
Moderate	80-120%	1,981	17%
Above Moderate	>120%	5,126	44%
Total	---	11,632	100%

Note: Pursuant to AB 2634, local jurisdictions are also required to project the housing needs of extremely low-income households (0-30% AMI). In estimating the number of extremely low-income households, a jurisdiction can use 50% of the very low-income allocation or apportion the very low-income figure based on Census data. There are 5,462 extremely low- and 5,018 very low-income households. Therefore, the City's very low-income RHNA of 2,872 units can be split into 1,436 extremely low-income and 1,436 very low-income units.

Chapter 13.5

Constraints Analysis

Many factors can encourage or constrain the development, maintenance, and improvement of housing stock. These factors fall into two categories — governmental and non-governmental constraints — and include physical constraints, land availability, development economics, and governmental regulations, all of which impact the cost and amount of housing produced. These constraints may result in housing that is not affordable to low- and moderate-income households or may render residential construction economically infeasible for developers. Constraints to housing production significantly impact households with lower incomes and special needs.

This chapter addresses both the governmental and non-governmental constraints that impact the City of Santa Clara's housing market and production. State law requires that Housing Elements analyze potential and actual governmental and non-governmental constraints to the production, maintenance, and improvement of housing for persons of all income levels and disabilities. The constraints analysis must also demonstrate local efforts to remove or mitigate barriers to housing production and housing for persons with disabilities. Where constraints to housing production related to the City's regulations or land use controls are identified, appropriate programs to remove or mitigate these constraints are included in the Housing Plan.

Government Constraints

Governmental constraints for affordable housing development are defined as policies, standards, requirements, or actions imposed by the various levels of government upon land and housing development. Although State and federal agencies play a role in the imposition of governmental constraints, local government's ability to influence these agencies is generally limited. Housing constraints associated with these State and federal governmental constraints are, therefore, not significantly addressed in this document.

Municipal Boundaries

The City of Santa Clara is completely surrounded by the boundaries of other cities: San José to the north, east and south; and Cupertino and Sunnyvale to the west. Other than a small parcel on Homestead Road, there are no other developable lands potentially annexable to the City. The City's new housing opportunities, therefore, must come from within the existing City limits, and primarily through redevelopment of existing parcels.

Land Use Controls and Development Standards

Land use controls have helped maintain the quality of the City's residential neighborhoods, consistent with community established goals. These land use controls, however, can be viewed as constraints in that they determine the amount of land to be developed for housing and establish a limit on the number of units that can be built on a site. These standards have not been changed substantially since 1969.

General Plan

On November 16, 2010, the Santa Clara City Council adopted the 2010-2035 General Plan. The 2010-2035 General Plan includes a range of residential land use designations and densities, from Very Low Density Residential with a maximum density of 10 dwelling units per acre, to High Density Residential with a maximum density of 50 units per acre. The new General Plan has also established three mixed use designations: Neighborhood Mixed Use, which allows residential densities up to 36 dwelling units per acre; Community Mixed Use, which allows residential densities up to 36 dwelling units per acre; and Regional Mixed Use, which allows residential densities up to 50 dwelling units per acre. The Related Santa Clara Project, Lawrence Station Area Plan, the Tasman East Specific Plan, the Patrick Henry Drive Specific Plan, and the Gateway Crossings project added higher-density General Plan designations for a total of fifteen land use designations that allow for residential development, as shown in Table 13.5-1.

Because of high land costs in the City, sites that are zoned for high-density housing are typically occupied by multi-family housing developments. The City has few instances where single-family homes occupy sites that are zoned for higher density housing.

Table 13.5-1: 2010-2035 General Plan Land Use Designations (Residential)

<i>Land Use Designation</i>	<i>Density/ FAR</i>
Very Low Density Residential	0 to 10 du/acre
Low Density Residential	8 to 19 du/acre
Medium Density Residential	20 to 36 du/acre
High Density Residential	37 to 50 du/acre
Very High Density Residential	51 to 100 du/acre
High Density Flex	60 to 149 du/acre
Urban Village	100 to 149 du/acre
Village Residential	60 to 149 du/acre
Urban Center	120 to 250 du/acre
Urban Center/ Entertainment District	37 to 90 du/acre
Transit Neighborhood	Up to 350 du/acre Less than 1 acre, minimum 60 du/acre Greater or equal to 1 acre, minimum 100 du/ac
Very High Density Mixed Use	50 to 120 du/acre

Table 13.5-1: 2010-2035 General Plan Land Use Designations (Residential)

<i>Land Use Designation</i>	<i>Density/ FAR</i>
Neighborhood Mixed Use	Minimum 10 du/acre for sites < 1 acre Minimum 20 du/acre for sites ≥ 1 acre Maximum 36 du/ ac Minimum Commercial FAR of 0.10
Community Mixed Use	Residential 20 to 36 du/acre Minimum Commercial FAR of 0.10
Regional Mixed Use	Residential 37 to 50 du/acre Minimum Commercial FAR of 0.15

Zoning Ordinance

The type, location and density of residential development are primarily regulated through the zoning ordinance. Zoning regulations serve to protect and promote the health, safety, and general welfare of the residents of a community while also serving to implement the goals and policies of the General Plan. The City began a comprehensive update to their Zoning Ordinance to reflect the goals and policies of the City's 2010-2035 General Plan in early 2014. The City is in the process of completing an update to the Zoning Ordinance that will be implemented in early 2023, addressing California statutory requirements with regard to a variety of issues, including solar energy systems, family day care homes, affordable housing, group homes, alterations to legal non-conforming buildings, and historic resources.

Currently, residential uses are permitted in ten zoning districts and in the City's mixed use overlay and combining districts, allowing flexibility for mixing land uses and supporting large-scale and master-planned development projects.

Density Bonus

The City's Density Bonus Ordinance was updated in 2015. The City currently provides density bonuses or equivalent financial incentives for housing projects which include affordable and/or senior housing units, consistent with State law. Modifications to the City's Density Bonus Ordinance, in order to meet the requirements of Government Code Section 65915, were made in conjunction with the adoption of the 2015-2023 Housing Element.

The City's Zoning Ordinance update, which will be implemented in early 2023, will bring the City into compliance with State Density Bonus Law, including recently adopted legislation that goes into effect in 2023.

Currently, requests for density bonuses and other concessions or incentives are generally processed concurrently with an application for a Planned Development rezoning. With the Zoning Ordinance update, most properties could develop under a conventional zoning district,

SANTA CLARA HOUSING ELEMENT

including properties that will be rezoned to one of the new high density residential or mixed use zoning districts. Under the updated Zoning Ordinance, requests for density bonuses and other concessions or incentives will generally be evaluated through the Planning permit process required for the project. Residential developments would be subject to by right approval by the Director of Community Development, including provisions for additional units allowed via density bonuses. Density bonus agreements would ultimately be approved by the City Council.

Inclusionary Housing

The City has had an “inclusionary” housing policy in place since 1992. The Affordable Housing Ordinance of 2018 requires private development projects with more than 10 units to include at least 15 percent of new housing units as affordable. For residential ownership projects with fewer than 10 units, either one dwelling at an affordable housing cost for a household earning up to 100 percent of AMI may be provided, or an in-lieu fee identified for residential ownership projects in the Affordable Housing Master Fee Schedule may be paid. Residential rental projects of 10 or more units must also provide at least 15 percent of the units at a maximum average of 100 percent AMI. Residential rental projects with fewer than 10 units may either provide an affordable unit or pay an in-lieu fee identified for residential rental projects in the Affordable Housing Master Fee Schedule. The City Council can also authorize a developer to utilize an alternate means of compliance such as a dedication of land for affordable housing, the development of affordable units at an off-site location, or some combination thereof.

The City’s Residential Density Bonus Standards make it clear that the provision of affordable units through the City’s inclusionary housing ordinance count toward units provided for the purpose of receiving benefits under the state’s density bonus law. As a part of the Action 2, Affordable Housing Ordinance, City staff will bring forward a revised affordable housing ordinance that includes deeper levels of affordability (5% at 50% AMI, 5% at 80% AMI and 5% at 120% AMI), which will make all development projects eligible for a density bonus. For non-residential projects, affordable housing requirements may be met through the payment of impact fees identified in the Affordable Housing Master Fee Schedule, calculated on a per square foot basis for net new gross floor area. This impact fee can be mitigated through the construction of affordable residential units on an appropriate housing site. For all new construction of mixed use projects that exceed 20,000 square feet, affordable housing requirements on the residential gross floor area portion of the mixed use project shall be met in line with the provisions of SCCC 17.40.080 or SCCC 17.40.090. Affordable housing requirements applicable on the non-residential gross floor area portion of the mixed use project shall be met in line with the provision of SCCC 17.40.100. As an alternative to the payment of an impact fee, a developer or owner may construct affordable residential units on an appropriate housing site.

As of 2021, the City has exceeded its fifth cycle RHNA goals by 3,013 units and has attained 289.1% of that goal without counting units permitted in 2022. This suggests that the City’s

inclusionary housing ordinance is not impacting feasibility to the point that market rate development is not occurring to meet housing needs. In fact, staff received input during Housing Element outreach asking that the affordable housing ordinance require deeper levels of affordability because 100%AMI is no longer affordable for many households in Santa Clara. If the City does amend its required affordability, it would need to consult with market rate and affordable housing developers to balance concerns about the depth of affordability and project feasibility.

On May 5, 2022, City staff participated in a countywide listening session with market rate and affordable housing developers. Regarding inclusionary policies, developers suggested that allowing flexibility in the options available (i.e. land dedication) to market rate developers was very important and opened up possibilities to partner with affordable developers. The City's inclusionary ordinance does offer flexibility in meeting its obligations.

Residential Development Standards

The City's Zoning Ordinance contains development standards for each zoning district. Table 13.5-2 outlines the residential standards under each zoning classification and specific area plans, including minimum lot sizes, setbacks, widths, and densities, as well as restrictions on building and landscape coverage.

Table 13.5-2: Residential Development Standards

<i>Residential Use Type</i>	<i>R1-8L</i>	<i>R1-6L</i>	<i>R2-7L</i>	<i>R3-18D</i>	<i>R3-25D</i>	<i>R3-36D</i>	<i>R3-M</i>	<i>R3-RV</i>	<i>MU</i>	<i>TMU</i>	<i>LSAP</i>	<i>TN</i>	<i>PHD</i>

Source(s): Santa Clara Zoning Ordinance, (2014), Tasman East Focus Area Plan, Lawrence Station Area Plan (LSAP), Patrick Henry Drive Specific Plan (PHD)

Notes:

1 Each lot greater than 22,000 square feet in size shall have not less than forty-five percent (45%) of the lot area developed into permanently maintained open space.

In addition to the residential categories identified below, the Planned Development zoning district also permits residential development. It allows flexibility in both development standards and land use mix not permitted in other zones in order to adapt to specific site constraints without reducing housing density or adding costs to affordable housing units. An analysis of Santa Clara's development regulations compared with those of Mountain View, Sunnyvale, and San José, showed that these cities have fairly similar standards. Additionally, in 2014 the City initiated an update to its Zoning Ordinance. As part of that update, the City will establish appropriate minimum and maximum densities in residential and mixed use districts consistent with the 2010-2035 General Plan. In sum, the City's development standards do not substantially restrict the cost and supply of housing overall, or in particular, lower income housing

Parking Standards

Parking can substantially add to the cost of housing. The City's Zoning Ordinance currently requires two spaces per unit in both single-family and multi-family districts. However, the City has reduced parking requirements for a number of recent multi-family residential projects, including the Camino Del Rey Senior Apartments. The City's current parking standards are summarized in Table 13.5-3 below. Over the three most recently adopted Specific Plans (in order of adoption: Lawrence Station, Tasman East (Transit Neighborhood) and Patrick Henry Drive (PHD), residential parking requirements have been progressively reduced and now stand at one parking space per unit (or less) in both Tasman East and PHD. As part of the comprehensive Zoning Ordinance update, the City will review its citywide parking standards and will reduce residential parking requirements for multi-family uses, including unbundling and additional reductions according to housing type (e.g., housing for people with developmental and other disabilities) and according to proximity to transit. In addition, see Action 3: Affordable Housing Incentives and Facilitation, which includes an objective to apply those parking reforms to parcels within the El Camino Real Specific Plan and the Santa Clara Station Area Plan areas.

Table 13.5-3: Parking Standards

<i>Housing Type/ Zoning District</i>	<i>Requirements</i>
Single-Family Dwellings (R1-8L, R1-6L, and R2-7L zones)	Two garage or carport parking spaces
Dwellings (R3-18D, R3-25D, and R3-36D zones)	One garage or carport shall be provided for each dwelling unit, plus one parking space for each dwelling unit
Multi-Family Dwellings (MU and TMU zones) ¹	At least one garage or carport shall be provided for each dwelling unit, plus one parking space for each dwelling unit
Mobile Home Park ²	One individually accessible and one tandem parking space per mobile home site
Recreational Vehicle Park	One visitor parking space shall be provided for every fifteen (15) recreational vehicle sites or fraction thereof
Emergency Shelters	One space per shelter employee
Accessory Dwelling Unit	No parking required
LSAP Studio and One Bedroom Residential Unit	One parking space per unit
LSAP Two or more bedroom Residential Unit	Two parking spaces per unit
Transit Neighborhood	One parking space per unit
PHD	One parking space per unit greater than 550 square feet and 0.5 spaces per unit less than 550 square feet

Source(s): Santa Clara Zoning Ordinance, 2022, Lawrence Station Area Plan (LSAP), Patrick Henry Drive Specific Plan (PHD)

2. R3-M zones exist in current zoning code but are not applied anywhere in the City and won't be used in the future.

3. R3-RV zones exist in current zoning code but are not applied anywhere in the City and won't be used in the future.

In the City's multi-family districts, the City is proposing to reduce the required parking from two spaces per unit to 1½ spaces per unit and to allow for unbundled parking for any additional spaces after the first parking space for each unit.

The parking standards for the MU – Mixed Use and TMU – Transit-oriented Mixed Use districts deserve a special mention here. Those zoning districts have not been used to zone any parcels within the City of Santa Clara and have not been included in the City's Zoning Ordinance Update because there are no parcels with a corresponding General Plan Land Use designation. The impact of those parking standards on the provision of housing is therefore moot.

Provision for a Variety of Housing Types

State Housing Element law specifies that jurisdictions identify adequate sites to be made available through appropriate zoning and development standards to encourage the development of various types of housing for all economic segments of the population. This includes single-family

SANTA CLARA
HOUSING ELEMENT

housing, multi-family housing, factory-built or manufactured housing, emergency shelters, and transitional housing among others. Permitted housing types are described in Table 13.5-4. Although single-family uses are permitted in multi-family zones, this rarely occurs in the City on sites large enough for multi-family housing due to the high costs of housing and limited availability of vacant land.

Table 13.5-4: Permitted Housing Types Within Residential Zoning Classifications

Source(s): Santa Clara Zoning Ordinance, 2014, Lawrence Station Area Plan (LSAP), Patrick Henry Drive Specific Plan (PHD), Tasman East Focus Area Plan

Single-Family Dwellings

The majority of the residential areas in the City are composed of single-family districts. Single-family dwellings are permitted in all of the City's residential districts, with the exception of the mixed use and mobile home park zones. However, there are few instances where multi-family properties are developed with single-family homes.

Multi-Family Dwellings

Most residential construction in recent years has been for multi-family units. Multi-family dwellings are permitted in the R3-18D, R3-25D, and R3-36D districts, as well as in the City's mixed use zones. Existing development standards have not constrained multi-family development, which typically provide a good opportunity for affordable housing in the City.

Accessory Units

The 2021 update to the city's Accessory Unit Zoning Ordinance includes regulations which allow for both Accessory Dwelling Units (ADUs) and Junior ADUs (JADUs) on a property, allowance of ADUs in multi-family zoning districts, and reduction of the required setbacks. The Zoning Ordinance defines an accessory unit as "one additional dwelling unit that includes a single kitchen, sleeping quarters, not more than one bathroom, and not more than two bedrooms. The accessory unit may be attached to or part of the existing single-family unit or may be a detached structure and shall meet all other requirements of the Zoning Ordinance." From 2018 through 2022, 246 accessory units have been permitted in the City for an average of 49.2 units per year.

Manufactured Housing

Factory-built, modular homes constructed in compliance with the California Building Code (CBC), and mobile homes/manufactured housing units that comply with the National Manufactured Housing Construction and Safety Standards Act of 1974, placed on permanent foundations, are considered single-family dwellings and are generally treated as such. Currently, the City permits manufactured housing in all R-1, R-2, and R-3 zones. The City also permits mobile home parks and recreational vehicle parks in the R3-M and R3-RV zones, respectively.

Residential Care Facilities

Residential care facilities can be described as any family home, group care facility or similar facility, including some transitional housing facilities, for 24-hour non-medical care of persons in need of personal services, supervision, or assistance essential for sustaining the activities of daily living. In accordance with State law (Lanterman Developmental Disability Services Act, AB 846 (1977), composed of divisions 4.1, 4.5 and 4.7 of the Welfare and Institutions Code and Title 14 of the Government Code), the City permits residential care facilities serving six or fewer persons in all residential zones. The Zoning Ordinance does not explicitly address residential care facilities for more than six persons. As part of the comprehensive Zoning Code update to be completed in early 2023, the City will include the by-right approval of residential care facilities serving seven or more residents, subject to objective standards.

Emergency Shelters

An emergency shelter is defined as “housing with minimal supportive services for homeless persons that is limited to occupancy of six months or less by a homeless person. No individual or households may be denied emergency shelter because of an inability to pay.”

Emergency shelters are currently a permitted use in the ML (Light Industrial) zone, provided they meet the minimum property development standards in which they are located when, on the date that a complete shelter management plan is submitted to the City, the number of existing shelter beds within the City is fewer than the City’s most recent annual count of homeless persons residing within the City.

If the demonstrated need has already been met, additional emergency shelters may be conditionally permitted in the ML (Light Industrial) zone, subject to conditions with the issuance of a use permit pursuant to Chapter 18.110 SCCC. The determination required by this subsection shall occur on the date the operator submits the materials.

The shelter bed maximum is the key constraint in the current permitting process for emergency shelters and limits the number of beds that can be permitted by right in the City of Santa Clara based on the prior year’s count of people experiencing homelessness. That constraint is proposed to be removed as a part of the Zoning Ordinance Update, and the availability of potential locations for emergency shelters will be expanded. As a part of the Zoning Ordinance Update (Action 9), the City is proposing to allow emergency shelters by right in the R-3 and R-4 Residential districts, the C-C and C-R Commercial districts, and the MU-VHD Mixed Use district. This would expand the total area available for emergency shelters to 1,573 acres and would potentially allow emergency shelters along commercial corridors such as Stevens Creek Boulevard, proximate to amenities and transit.

The Zoning Ordinance update would also allow emergency shelters in the LI Light Industrial and PQP Public/Quasi-Public districts with the issuance of a Minor Use Permit.

Low Barrier Navigation Centers

A Low Barrier Navigation Center is defined as “a housing first, low-barrier, service-enriched shelter focused on moving people into permanent housing that provides temporary living facilities while case managers connect individuals experiencing homelessness to income, public benefits, health services, shelter, and housing.”

State law requires low barrier navigation centers be a use permitted by right in mixed-use zones and non-residential zones permitting multi-unit uses, if specified requirements are met.

In the City’s comprehensive Zoning Ordinance update to be completed in early 2023, Low Barrier Navigation Centers will be listed as a by-right use in the R3, R4 and R5 multi-family residential districts, the MU-NC, MU-CC, MU-RC, MU-MD, and MU-VHD mixed use districts, the C-C, C-

R, and C-D commercial districts. Like emergency shelters, Low Barrier Navigation centers would also be allowed in the LI Light Industrial and PQP Public/Quasi-Public districts subject to a Minor Use Permit.

Transitional Housing

Transitional housing is a type of housing used to facilitate the movement of homeless individuals and families to permanent housing. Transitional housing can take several forms, including group quarters with beds, single-family homes, and multi-family apartments, and typically offers case management and support services to return people to independent living (usually between six and 24 months).

California Government Code Section 65582 (h) defines “transitional housing” and “transitional housing development” as buildings configured as rental housing developments but operated under program requirements that require the termination of assistance and recirculation of the assisted unit to another eligible program recipient at a predetermined future point in time that shall be no less than six months from the beginning of the assistance. Pursuant to SB 2 (2007), which amended Sections 65582, 65583 and 65589.5 of the Government Code, transitional housing that is a residential use should be subject only to those restrictions that apply to other residential dwellings of the same type in the same zone.

Historically, the City has shown an ability to provide transitional housing through group homes and small apartment complexes. The Zoning Ordinance was amended, in conjunction with the adoption of the 2015-2023 Housing Element, to permit transitional housing in the same manner as other residential dwellings of the same type in the same zone, per applicable State law. The Ordinance amendment was approved by the City Council on December 9, 2014.

Supportive Housing

State law requires local jurisdictions to address the provisions for supportive housing. California Government Code Sections 65582 (f)(g) defines “supportive housing” as housing with no limit on length of stay, that is occupied by the target population, and that is linked to an on-site or off-site service that assists the supportive housing resident in retaining the housing, improving his or her health status, and maximizing his or her ability to live and, when possible, work in the community.

As with emergency shelters and transitional housing, the City has previously been able to provide supportive housing through group homes and small apartment complexes. The Zoning Ordinance was amended, in conjunction with the adoption of the 2015-2023 Housing Element, to permit supportive housing in the same manner as other residential dwellings of the same type in the same zone, per applicable State law. The Ordinance amendment was approved by the City Council on December 9, 2014.

SANTA CLARA HOUSING ELEMENT

The Zoning Ordinance update will add supportive housing as a by-right use in all multi-family and mixed-use zones.

Single-Room Occupancy (SRO) Housing

The City's proposed Zoning Ordinance will allow Single-Room Occupancy (SRO) Facilities by right in the C-C Community Commercial, C-R Regional Commercial, C-D Downtown Commercial, MU-CC Mixed Use Community Commercial, and MU-RC Mixed Use Regional Commercial districts.

Employee Housing

The City's Zoning Ordinance does not currently include provisions for employee housing. Pursuant to the Health and Safety Code, employee housing for six or fewer employees is to be treated as a single-family structure and permitted in the same manner as other dwellings of the same type in the same zone. As part of the comprehensive Zoning Ordinance update to be completed in early 2023, the City will amend the Zoning Ordinance to be consistent with these State requirements for employee housing.

Zoning and Land Use

Restrictive land use policies and zoning provisions can constrain the development of housing for persons with disabilities. Under the State Lanterman Developmental Disabilities Services Act (composed of divisions 4.1, 4.5 and 4.7 of the Welfare and Institutions Code and Title 14 of the Government Code), small licensed residential care facilities for six or fewer persons must be treated as regular residential uses and permitted by right in all residential districts. The City of Santa Clara is compliant with the Lanterman Act. Furthermore, the Zoning Ordinance is being updated concurrent with the Housing Element update to address the provision of emergency shelters, transitional housing, and supportive housing – housing types that are suitable for occupancy by persons with disabilities (see discussions on the provision of a variety of housing types earlier). Specifically, the Zoning Code Update incorporates the following provisions to be consistent with State law:

- AB 2221 (2022): Adds front setbacks to the list of development standards that cannot preclude the development of an Accessory Dwelling Unit (ADU). Added to ADUs, Section 18.60.030 of the Zoning Code Update.
- SB 897 (2022): Increases the height limit to 18 feet for detached ADUs within ½ mile of transit or on lots with multifamily dwellings, and to 25 feet or the primary dwelling height for attached ADUs. Added to ADUs, Section 18.60.030 of the Zoning Code Update.
- SB 897 (2022): Clarifies that a Junior Accessory Dwelling Unit (JADU) can be within an attached garage; if a JADU does not have a separate bathroom, it needs to have both an interior connection to the main living unit and an exterior entry; also requires owner

occupancy and deed restrictions for JADUs. Added to ADUs, Section 18.60.030 of the Zoning Code Update.

- AB 682 (2022): Allows Density Bonuses to be extended to shared housing projects. Added to Density Bonuses, Chapter 18.64 of the Zoning Code Update.
- SB 290 (2021): Changes standard language regarding incentives to not include the physical environment. Added to Density Bonuses, Chapter 18.64 of the Zoning Code Update.
- Low Barrier Navigation Centers: Adds a definition, an enumerated use, and a parking standard for Low-Barrier Navigation Centers to the Zoning Code Update. Allowed by right in the same districts that emergency shelters are allowed, and in all mixed-use districts.
- AB 2339 (2022): Changes where emergency shelters need to be zoned. In the proposed code update, Emergency Shelters are proposed to be allowed by right in the R-3 and R-4 Residential districts, the C-C and C-R Commercial districts, the MU-VHD Mixed Use district, and the LI Light Industrial district.
- AB 2162 (2018): Added Supportive Housing as a by-right use in all multi-family and mixed-use zones.
- Residential Care Facilities: Separated Residential Care Facilities from Community Care Facilities, which are non-residential in nature by adding a definition for Residential Care Facilities, and an enumerated use for residential care facilities with six or fewer residents, which are allowed by right in all residential districts, and for seven or more, which are allowed with a minor use permit, approved by the Director of Planning.

Definition of Family

A community's Zoning Ordinance can potentially restrict access to housing for households failing to qualify as a "family" by the definition specified in the Zoning Ordinance. Even if the code provides a broad definition, deciding what constitutes a "family" should be avoided by jurisdictions to prevent confusion or give the impression of restrictiveness.

California court cases have ruled that a definition of "family" that: 1) limits the number of persons in a family; 2) specifies how members of the family are related (i.e., by blood, marriage or adoption, etc.), or 3) a group of not more than a certain number of unrelated persons as a single housekeeping unit, is invalid. Court rulings stated that defining a family does not serve any legitimate or useful objective or purpose recognized under the zoning and land planning powers of the jurisdiction, and therefore violates rights of privacy under the California Constitution.

The Santa Clara Zoning Ordinance defines a family as "an individual or group of persons living together as a single housekeeping unit in a dwelling unit, including State or County licensed residence programs which comply with State law. Family shall not be construed to include a fraternity, sorority, club, or other group of persons occupying a hotel, boarding house, or similar institution." This definition is not overly restrictive and does not constrain access to, or the development of housing.

Reasonable Accommodation

Both the federal Fair Housing Amendments Act (FHAA) and the California Fair Employment and Housing Act direct local governments to make reasonable accommodations (i.e., modifications or exceptions) in their zoning laws and other land use regulations when such accommodations may be necessary to afford disabled persons an equal opportunity to use and enjoy a dwelling. The City conducted an analysis of its Zoning Ordinance, permitting procedures, development standards, and building codes to identify potential constraints for housing for persons with disabilities. The City's policies and regulations regarding housing for persons with disabilities are described below.

A request to retrofit an existing residence with accessibility equipment (i.e., a ramp, landing, lift, etc.) is typically approved "over the counter", if the proposal does not negatively impact the neighborhood or surrounding properties. When more review is required, the request is reviewed through the City's Development Review process. However, at times it may be reasonable to accommodate requests from persons with disabilities to waive specific standards or procedures of the Zoning Ordinance to ensure that homes are accessible to persons with disabilities. In conjunction with the adoption of the 2015-2023 Housing Element, the City adopted a reasonable accommodations ordinance. The Ordinance amendment was approved by the City Council on December 9, 2014. That ordinance is codified as Chapter 18.118 of the Zoning Code.

The required Zoning Code findings for approval or denial of a reasonable accommodation request are as follows (Section 18.118.040):

(f) Findings. A written determination to approve, approve with conditions, or deny a request for reasonable accommodation shall be based on the following factors:

- (1) Whether the parcel and/or housing that is the subject of the request for reasonable accommodation will be used by an individual with a disability;
- (2) Whether the request for reasonable accommodation is necessary to make the specific housing available to an individual with a disability;
- (3) Whether the requested reasonable accommodation would impose an undue financial or administrative burden on the City; and
- (4) Whether the requested reasonable accommodation would require a fundamental alteration of the zoning or building laws, policies, and/or other procedures of the City.

Approvals of Reasonable Accommodation requests are made at staff level, by the Zoning Administrator.

The processing fee for a Reasonable Accommodation request is \$846, or the equivalent of a Minor Amendment to an Approved Project. Processing times vary from less than week for over-the-

counter approvals for things like a new access ramp to 2-3 months for larger projects requiring a public hearing.

The Zoning Ordinance Update also includes a staff-level Reasonable Accommodation process, approved by the Director of Community Development. The approval findings are largely the same, but include an extra consideration regarding other, different reasonable accommodations that might have an equivalent level of benefit (Finding F, below):

18.118.060 – Findings and Decision

The written decision to approve, conditionally approve, approve with modifications, or deny a request for Reasonable Accommodation shall be based on consideration of all of the following factors:

- A. The physical attributes of the property and structures;
- B. Whether the housing, which is the subject of the request, will be used by an individual with a disability;
- C. Whether the request for Reasonable Accommodation is necessary to make specific housing available to an individual with a disability;
- D. Whether the requested Reasonable Accommodation would impose an undue financial or administrative burden on the City;
- E. Whether the requested Reasonable Accommodation would require a fundamental alteration in the nature of a City program, policy, procedure, or law, including but not limited to land use and zoning; and
- F. Whether alternative Reasonable Accommodations may provide an equivalent level of benefit.

Building Codes and Enforcement

The City enforces Title 24 of the California Code of Regulations that regulates the access and adaptability of buildings to accommodate persons with disabilities. Government Code Section 12955.1 requires that 10 percent of the total dwelling units in multi-family buildings without elevators, consisting of three or more rental units or four or more condominium units, are subject to the following building standards for persons with disabilities:

- The primary entry to the dwelling unit shall be on an accessible route unless exempted by site impracticality tests.
- At least one powder room or bathroom shall be located on the primary entry level served by an accessible route.

SANTA CLARA HOUSING ELEMENT

- All rooms or spaces located on the primary entry level shall be served by an accessible route. Rooms and spaces located on the primary entry level and subject to this chapter may include but are not limited to kitchens, powder rooms, bathrooms, living rooms, bedrooms, or hallways.
- Common use areas shall be accessible.
- If common tenant parking is provided, accessible parking is required.

Compliance with Building Codes and State accessibility laws and regulations (California Code of Regulations (CCR) Title 24) may increase the cost of housing production and impact the viability of rehabilitating older properties. These regulations are minimum Statewide standards to ensure safety and accessibility and do not significantly contribute to governmental constraints regarding housing for persons with disabilities. In addition, the City does not impose supplemental local requirements with respect to accessibility. Compliance with provisions of the Code of Regulations, California Building Standards Code, and federal Americans with Disabilities Act (ADA) is assessed and enforced by the Building Division of the Community Development Department as a part of the building permit submittal process.

Planning and Development Fees

The City and other agencies assess a number of fees that affect the development and cost of housing. Utility service connection fees; upgrade of public curb, gutter, and sidewalk (and sewer lateral(s) if necessary); permit fees; and dedication requirements are similar or lower compared to those in other communities in Santa Clara County and the Bay Area. In some cases, fees for street trees, drainage, and traffic mitigation are also collected. Table 13.5-5 provides a breakdown of all planning, engineering, and other development fees that may be pertinent to different types of residential projects.

Table 13.5-5: Planning and Development Fees

<i>Application</i>	<i>Fee</i>
Planning Fees	
Architectural Review	\$813-\$32,529
Development Agreement	\$10,844-\$32,529

Storm Drain	\$7,510.26 per acre
Storm Drain Improvements	\$38.37 per foot
Recreation Tax	\$15 for first bedroom; \$5 for each additional
School Impact Fee	\$4.08 per sq. ft.
Traffic Impact Fee	SF: \$1,274.11 per unit MF: \$566.27 per unit
Park Impact Fee	SF: \$38,068 - \$45,320 MF: \$30,659 - \$36,500

Source(s): City of Santa Clara, 2022

Notes: SF = Single Family, MF = Multi-family.

Park Impact Fee is based on type of project (SF or MF) and geographic location in the City.

Table 13.5-6 compares the planning and development fees calculated for three residential prototype projects in Santa Clara with all other jurisdictions in Santa Clara County using. Generally, Los Altos Hills, Cupertino, and Sunnyvale charge the highest fees in the area while San Jose, the County, and Los Gatos charge the lowest fees. The City of Santa Clara's fees for residential projects are moderate within the County.

Table 13.5-6: Regional Comparison of Planning and Development Total Fees (includes entitlement, building permits, and impact fees) Per Unit

<i>Jurisdiction</i>	<i>Single Family</i>	<i>Small Multi-Family</i>	<i>Large Multi-Family</i>
Campbell	\$72,556	\$20,599	\$18,541
Cupertino	\$136,596	\$77,770	\$73,959
Gilroy	\$69,219	\$40,195	\$39,135
Los Altos Hills	\$146,631	N/A	N/A
Los Gatos	\$32,458	\$5,764	\$3,269
Milpitas	\$77,198	\$74,326	\$59,740
Monte Sereno	\$33,445	\$4,815	\$4,156
Morgan Hill	\$55,903	\$41,374	\$36,396
Mountain View	\$90,423	\$69,497	\$82,591
San Jose	\$9,919	\$23,410	\$23,410

**Table 13.5-6: Regional Comparison of Planning and Development Total Fees
(includes entitlement, building permits, and impact fees) Per Unit**

<i>Jurisdiction</i>	<i>Single Family</i>	<i>Small Multi-Family</i>	<i>Large Multi-Family</i>
Santa Clara	\$72,034	\$64,980	\$62,084
Saratoga	\$64,272	\$17,063	\$15,391
Sunnyvale	\$133,389	\$126,673	\$98,292
Unincorporated County	\$25,166	N/A	N/A

Source(s): Century Urban Report Spring 2022

Note: Prototype project details:

Single Family = 2,600 square foot with 500 square foot garage (total development costs \$2,777,000)

Small Multi-Family = 10 units (total development costs \$7,548,750).

Large Multi-Family = 100 units (total development costs \$70,110,000).

In Santa Clara, the per dwelling unit fees are moderate when compared with other jurisdictions in the County, and the per dwelling unit fees for multi-family projects are less than for single family projects. The total fees for the three residential prototype projects represent only a small portion of total development costs (Single Family = 2.6%, Small Multi-Family = 8.6%, Large Multi-Family = 8.8%).

Because planning and development fees in Santa Clara are moderate compared to other jurisdictions in the County and they represent a small percentage of overall development costs, they are not considered a significant constraint to the construction of market-rate or affordable housing. Lower per dwelling unit fees for multi-family projects, compared with fees for single family projects, supports the construction of more naturally affordable multi-family housing.

Planning and Development fees have not been a significant constraint to the development of housing in the City of Santa Clara as evidenced by the total of 12,216 units in 34 pending or approved housing projects throughout the City, including several under construction (see Table 13.6-2 Pending and Approved Projects). Most of these projects provide a range of units affordable to different income levels. Seven of these projects are 100-percent affordable at Low and Very Low Income levels.

On- and Off-Site Improvement Requirements

On- and off- site improvements, including public streets, curbing, sidewalks, streetlights, water, sewer, and drainage requirements, have an impact on the cost of residential development. Improvement requirements for new developments are regulated under the Subdivision Ordinance (Chapter 17.05 of the City Code). Off-site improvement requirements are less costly in a fully developed community since infrastructure needed to serve infill development is already in place. However, the financial burden of improvements as the City's infrastructure ages is a concern. To assist private developers and public projects in the development process, the City has published the Standard Details document which outlines construction standards for the most

common improvement requirements, such as sidewalks, storm drains, and sewer connections. This publication is updated periodically and available on the City's website. The standards are as follows:

- Dedication of streets, alleys and other public rights-of-way or easements may be a condition of approval for a tentative, or parcel map. These requirements may be easements that are needed for streets, alleys, access, drainage, public greenways, scenic easements, public utilities, and other public purposes. In addition, these easements or dedications may include requirements for improvements.
- Required on-site street improvements can include construction of curbs, sidewalks, driveway approaches, and transitions.
- Storm drain systems must be designed to collect and convey storm water, avoid damage to adjacent properties, and support the ultimate development of the watershed. Off-site storm drain improvements may also be required to satisfy this requirement.
- Projects must connect to sewer, water, gas, and electric lines.
- Development located in the Utility Underground District, as designated in the current General Plan, is required to underground utility lines (or pay an in-lieu fee).

The City's Project Clearance Committee (a development review committee made up of representatives from different departments in the City) reviews new development applications and determines, pursuant to each City department, required infrastructure improvements and conditions of approval.

Local Processing and Permit Procedures

Development review can affect housing costs. Timelines for permit processing are estimated for various permit and approval types in Table 13.5-6 and Table 13.5-7. There are no constraints to affordable housing or multi-family housing over and above requirements for single-family and market rate units. Moreover, permit processing in Santa Clara is consistent with, if not faster and more effective than, permitting in comparable nearby cities. Project processing, from initial submittal through discretionary review and building permit approval, averages six months for most residential developments.

Table 13.5-7: Planning and Permit Procedures

<i>Type of Approval/ Permit</i>	<i>Processing Time</i>	<i>Approval Body</i>
Ministerial Review	0 to 2 weeks	Staff
Conditional Use Permit	1 and ½ to 4 months	Planning Commission
Zone Change	4 to 9 months	City Council
General Plan Amendments	4 to 9 months	City Council
Site Plan Review	2 to 6 weeks	Staff
Architectural/ Design Review	3 to 12 weeks	Director of Community Development

Table 13.5-7: Planning and Permit Procedures

<i>Type of Approval/ Permit</i>	<i>Processing Time</i>	<i>Approval Body</i>
Tentative Map (fewer than 5 parcels)	3 to 6 months	City Council
Tentative Map (more than 5 parcels)	3 to 6 months	City Council
Initial Environmental Study	3 to 6 months	Approval Body
Environmental Impact Report	12 to 18 months	Approval Body

Source(s): City of Santa Clara, 2022

The following review and hearing bodies would typically be involved in the approval process for a new housing or mixed use development project:

- **Project Clearance Committee (PCC):** The development review committee made up of representatives from different departments in the City typically including Planning, Public Works (Engineering and Traffic), Utilities (Water, Sewer, and Electric), Police, Fire, and the Building Division.
- **Director of Community Development:** The Director of Community Development or designee hears projects subject to the Architectural Review process.
- **Historical Landmarks Commission (HLC):** An appointed commission of members of the public who review proposals and make recommendations related to structures on the local, State, or national register of historic places, as well as applications for Mills Act contracts.
- **Planning Commission (PC):** An appointed commission of members of the public who review development applications for consistency with the General Plan and Zoning Ordinance of the City of Santa Clara and are the deciding body for variances and Conditional Use Permits.
- **City Council (CC):** A body of seven elected individuals who act as the governing body for the City of Santa Clara.

Architectural Review Process

Architectural review in Santa Clara is intended to ensure the implementation of Zoning Ordinance standards and General Plan policies. Architectural review is typically required for most residential projects, including multi-family developments, as well as single-family attached developments and developments taller than one story. This process does not provide any additional burden for affordable housing projects and therefore are not considered a constraint to development. This process is codified in Chapter 18.76 of the City's Zoning Ordinance, which was revised in 2020 to create a streamlined process by replacing a committee structure as the approval body for Architectural Review applications with the Director of Community Development.

Under this process, an applicant submits plans and drawings for any sign, building, structure, or alteration of the exterior of a structure in a form and detail prescribed by the Director of Community Development. The Community Development Director or designee limits decisions on multifamily projects to objective standards in conformance with the State of California's Housing Accountability Act. The following considerations are used by the Director of Community Development in rendering decisions on all Architectural Review applications, which also include commercial and industrial development proposals.

- Off-street parking areas, screening strips and other facilities and improvements must meet the Zoning Ordinance and General Plan intent. Any applicable state legislation that waives or reduces parking standards are applied.
- Design and location of the proposed development and its relation to neighboring developments and traffic will not impair the desirability of the neighborhood, will not create traffic congestion or hazard, and will not be detrimental to harmonious development. For multifamily residential projects, ensuring the application of objective development standards will be used to determine if the development meets this standard.
- Approval will not adversely impact the health, comfort or general welfare of persons residing or working in the neighborhood. For multifamily residential projects, ensuring the application of objective development standards will be used to determine if the development meets this standard.
- The Director of Community Development may require the applicant to modify buildings, parking areas, landscaping, signs, and other facilities and improvements to meet Zoning Ordinance and General Plan requirements.
- The granting of any architectural approval is an administrative function; therefore, the action is final and conclusive, except in the event of an appeal.
- In the event the applicant or others affected are not satisfied with the decision of the Director, they may appeal the decision to the City Council. In the case of permits for single-family homes, the affected parties first appeal is to the Planning Commission, and if still not satisfied, the affected party may appeal to City Council.
- Any architectural review approval granted shall be automatically revoked and terminated if not used within two years of original grant or within the period of any authorized extensions.

Since the City Council adopted the streamlined Architectural Review process in 2020, no Architectural Review applications for multi-family housing have been denied.

A typical residential development project in a standard zoning district would be required to obtain approval through the Development Review Hearing process, heard by the Director of Planning. Such a project would typically be subdivided, requiring a Tentative Map as well. Prior to obtaining these entitlements, projects go through the process of review by the project planner, and by the Project Clearance Committee to work out details and conditions from each City

department. The associated environmental review per the California Environmental Quality Act (CEQA) would also be completed during this process. The time it takes to complete this process varies per project. However, from initial submittal to approval, the process typically takes four to six months, or four to 18 months if an EIR is required.

SB 35 Streamlining

In accordance with Government Code section 65913.4 (SB 35 (2017)), applications for multi-family residential development that include a minimum of 50 percent lower income units may be eligible for a streamlined, ministerial approval process if they meet objective standards as outlined in the Government Code. By March 2023, the City will create an SB 35 checklist and written procedures for processing SB 35 applications.

Planned Development

Many residential development projects in the City are processed via the Planned Development (PD) process to integrate uses, utilize imaginative planning and design concepts, subdivide land in a manner that results in units not having required frontage on a dedicated public street, or to create a community ownership project. Through the PD process, the number of units permitted is governed by the General Plan.

A development plan is required to process a PD. The plan must be designed to provide an environment of a stable and desirable character, and comply with the General plan land use designation, and justify the mixture of normally separated uses and exceptions to normal regulations (such as on-site parking, landscaping, building lot coverage, height limits, setback requirements, required distances, and buffering between residential and commercial components). An application for a planned development zoning must accompany the development plan. Construction of the project must begin within two years of the City Council approval. The time to process a PD is estimated between six and 12 months. Given that the City has created conventional/conforming zoning districts that allow densities of at least 100 DU/AC, the use of the PD zoning process is optional.

Table 13.5-8 presents the number of units applied for in the last three years, along with the permit process attached to each unit. Over the last three years a total of 2,730 residential units have been applied for with 220 units, or 8% of the total applied for using the PD zoning process. In addition, new permitting processes mandated by changes to state law such as SB 330 and AB 3194, have created alternate non-discretionary pathways for the approval of projects not consistent with the approved zoning ordinance.

Adoption of the Zoning Ordinance (Action 9 in the Housing Plan) will also eliminate barriers to the by-right non-discretionary approval of Housing projects by creating and applying mixed use zoning districts along the El Camino Real corridor, where PD zonings have typically been used to create housing projects in the absence of adopted zoning designations for the corridor,

Table 13.5-8. Residential permit process, 2020-2022

Year	Architectural Review	PD zoning	ADUs
2020	1,040	114	75
2021	529	106	83
2022	1,684	0	150
<i>Total units applied for 2020-2022 = 2,730</i>			

All new large-scale development projects of at least 25 contiguous acres where a mixture of residential with commercial, office, research and development and/or public uses is proposed are required to be rezoned to the Planned Development-Master Community (PD-MC) zoning district. An application for rezoning to the PD-MC district is submitted as a separate application from the site development application and must include a master community plan that, if approved by the City Council, will become a part of the zoning map of the City of Santa Clara. The master community plan must conform to the City's General Plan and overall residential density must also conform to the City's General Plan, though individual housing types could be greater or less than the average.

An application for development within a PD-MC district must include a development area plan, which may be submitted any time subsequent to submittal of the PD-MC district application. A development area plan must be a minimum of 20 percent of the total acreage of the project or 10 acres, whichever is less. If the development area includes property designated for a public use or is proposed for use as affordable housing, then no minimum acreage shall apply. The Director of Planning and Inspection also has the authority to waive the minimum acreage requirement under exceptional circumstances.

Consideration of development area plans will include notification to surrounding property owners and neighbors in the same fashion as the original master community plan hearings. The Planning Commission is responsible for considering the development area plan application concurrent with or after its consideration of the master community plan application. In general, the time for the processing and review of PD-MC applications averages 12-18 months. This is an appropriate timeframe given the scale of these types of projects, which usually require the preparation of an Environmental Impact Report (EIR). Construction in each development area must begin within two years of final development area plan approval by the City Council. The Planning Commission may also grant extensions of up to two years (per extension). Developments in the PD-MC district are not required to undergo the Architectural Review

SANTA CLARA HOUSING ELEMENT

process. However, most residential development activities in the City do not require the processing of a PD-MC, just a Planned Development (PD) permit.

The Related Santa Clara project, located just north of the stadium is only the second development to use the PC-MC process. The first development, Rivermark, on the site of the Agnews Developmental Center campus, was approved in 2000. Given the constrained nature of the city boundaries and the fact that the city is built out, it is unlikely that developers will be using the PD-MC process in the future.

In the neighboring City of Cupertino, multi-family planned development projects take approximately four months to process, assuming no Environmental Impact Reports (EIR) would be required. However, if an EIR is required, the timeframe can be extended significantly. In Mountain View, another neighboring jurisdiction, the timeframe to process and review a large-scale development is approximately six to 12 months. Similarly, in Santa Clara, the timing for the processing and review of a PD or PD-MC application is largely dependent on the environmental clearance requirements.

The Zoning Ordinance update should reduce the number of projects that have historically relied on the PD process by including new high-density residential and mixed-use zoning districts that conform to the General Plan, and new provisions that streamline the permitting process for projects that meet new objective development standards.

Zoning Transparency

Per AB 1483 (2019), for purposes of zoning and fee transparency, the City of Santa Clara provides the following information online:

The Zoning Ordinance is available on the City's website at:

<https://www.codepublishing.com/CA/SantaClara/#!/SantaClara18/SantaClara18.html>

Zoning designations for every parcel with the City of Santa Clara is available at:

<https://map.santaclaraca.gov/public/index.html?viewer=regional>

The City's Planning Fee schedule is available at:

<https://www.santaclaraca.gov/home/showpublisheddocument/56997/637291919770930000>

Building Codes and Enforcement

Title 24 of the California Code of Regulations, also referred to as the California Building Standards Code (CBSC), governs the design and construction of buildings, facilities, and associated equipment throughout California.

The City of Santa Clara adopted the current 2019 Building Standards Code, with amendments, in November of 2018, and those standards have been in effect since January 1, 2020.

On October 18, 2022 the City Council adopted the 2022 CBSC, with local amendments, to be effective January 1, 2023. The local amendments, which are intended to address building safety concerns of relevance to the City of Santa Clara, include the following elements:

- 2022 California Building Code, Chapter 3 and Chapter 9: Additional automatic fire sprinkler requirements for Group R3 occupancies.
- 2022 California Building Code, Chapter 10: Additional requirements for safe stairway configuration and the routing of emergency exit paths to facilitate emergency egress out of multi-story buildings.
- 2022 California Building Code, Chapter 19: Additional requirements for Structural Plain Concrete in Seismic Design Category C, D, E, or F.

These amendments were found to be prudent and necessary based upon the City's climatic, topographical, and geological conditions and are intended to promote safety for future residents in the context of Santa Clara's urban environment, particularly as the City is increasingly granting land use entitlements for higher density Type III, and in some cases, Type I construction, including the use of towers located above podiums.

The City adopted its first "Reach Code" (optional local energy code amendments that exceed or enhance State code standards) in November 2021, following a long public process. The 2021 Reach Code made local amendments to the 2019 version of the CBSC: specifically, the California Energy Code and the California Green Building Standards Code. The Reach Code mandates the use of electricity as a power source in new construction, limits installation of natural gas plumbing and meters, and increases requirements on new construction to install electric vehicle infrastructure. Non-substantive changes to the 2021 Reach Code were adopted on October 18, 2022 to reflect the 2022 update of the CBSC ("2022 Reach Code").

Existing single-family, duplex, and triplex units are inspected only when an owner seeks a permit for additional construction or when complaints are received. Certain types of major additions require the applicant to bring the building or portion thereof up to current codes. Site improvement standards for residential development in the City, with the exception of minimum parking requirements, are not more restrictive than those in surrounding jurisdictions. Parking ratios for newer multi-family districts, including the Transit Neighborhood and the Patrick Henry Drive districts, are lower than for comparable zoning designations of neighboring cities.

Airport Noise and Use Limitations

The most significant governmental constraint in the City is the State-required airport noise and Airport Land Use Commission regulations that prohibit and limit new housing near the San José International Airport within noise and safety zones. The San José Norman Y. Mineta International Airport is located to the east of, and adjacent to, the City. Noise generated by aircraft using the Airport has a noticeable effect on Santa Clara residents in the area north of the U.S. 101. Proposed housing in these areas is potentially required to have noise limiting construction methods including specially designed windows, walls, and insulation. These additional construction requirements often burden the developer and limit new construction near the airport.

Environmental and Infrastructure Constraints

The parcels identified as housing resources in the 6th cycle Housing Element are largely located in areas with adopted Specific Plans, and those Specific Plans include infrastructure plans that document existing infrastructure and any needed infrastructure improvements to support build-out of those plans, and a strategy for funding those improvements. Further, each specific plan amendment to the General Plan has conducted an Environmental Impact Report (EIR) and the Housing Element itself, upon adoption, will be CEQA compliant.

Water Supply

The City of Santa Clara receives its potable water supply from the San Francisco Public Utilities Commission (SFPUC), the Santa Clara Valley Water District (SCVWD), and groundwater from City-owned wells. In the City's 2020 Urban Water Management Plan (UWMP), the City has confirmed that it is able to meet water demands under all potential hydrologic conditions, as demonstrated by the Drought Risk Assessment required by the State's Water Code.

UWMPs, which are updated every five years, must demonstrate that the water supplier has sufficient entitlements and infrastructure to meet future water demands in their service area. Future water demands are determined using population growth estimates from the relevant general plan. For the City of Santa Clara, water supply is not an identified constraint on housing production. This has been verified in the Environmental Impact Reports for the Specific Plan areas and other housing development projects that comprise the housing units identified in this Housing Element. The addendum to the 2010 General Plan Update for the 6th Cycle Housing Element Update consolidates this information into one place for decision-makers and the public, concluding that there is sufficient existing capacity to accommodate the City's RHNA.

The City's Water and Sewer Department is in the process of adopting specific procedures to grant priority water and sewer service to developments with units affordable to lower-income households. (Gov. Code, § 65589.7.) An implementing action (Action 20, Water and Sewer Affordable Housing Service Provisions) has been added to the Housing Plan.

The SCVWDs 2020 UWMP has also indicated that it will be able to provide all water demands for Santa Clara County (including the City of Santa Clara) through 2045.

Wastewater

Wastewater is collected by sewer systems in the cities of Santa Clara and San José and conveyed by pipeline to the San José - Santa Clara Regional Wastewater Facility (RWF). If existing water treatment facilities would be insufficient to service the increased population anticipated by a general plan, the UWMP must identify new or expanded water treatment facilities to meet the additional need. If a development project is compliant with its general plan, that project's impact to water treatment facilities would be captured and planned for in the corresponding UWMP. If a development project is not compliant with its general plan designation, it will require evaluation to determine if it independently triggers a need for new or expanded facilities. The Housing Element is compliant with the City's General Plan, as amended. As such, the project's water demand is consistent with City of Santa Clara's 2020 UWMP population growth projection. Therefore, the Housing Element's impact to water treatment facilities is captured in the City of Santa Clara's 2020 UWMP, and the identified housing resources in the Housing Element do not trigger a need for additional water treatment facilities. This impact would be less than significant, and no mitigation would be required.

Energy

The City of Santa Clara owns and operates the municipal electric utility, Silicon Valley Power (SVP), which services over 57,000 residential, commercial, and industrial customers in the City of Santa Clara. It owns, operates, and participates in more than 590 megawatts of electric generating resources supplemented by purchase agreements for 261 megawatts (MW) of additional capacity. In an average year, approximately 45 percent of SVP-owned generating capacity comes from renewable energy sources—either geothermal, hydroelectric, or wind. Residential electricity demand is low compared with the energy needs of data centers and other high-tech firms that are located in Santa Clara.

In 2022, the City updated the Santa Clara Climate Action Plan to establish GHG emissions reduction measures that the City will implement to achieve the State-recommended GHG emissions reductions which include a near term reduction in GHG emissions by 2030 (SB32). The Climate Action Plan's primary goals include a transition to clean renewable energy, diversion of waste, and promoting energy efficiency, water conservation, and climate resiliency.

Street System

Vehicular circulation in the City includes a wide network of surface streets. With the influx of workers into the job-rich City during the day, commute patterns are northbound in the morning and southbound in the evening. Existing and perceived future traffic delays are a major concern of Santa Clara residents, as expressed by during community outreach activities. Since most of the City streets are fully improved with limited opportunity for widening, alternative travel modes, such as public transit, bicycling, and walking, offer opportunities to address traffic constraints.

The parcels identified as housing resources in the 6th cycle Housing Element are located in areas with adopted Specific Plans which identify and accommodate infrastructure needs and requirements. Any mitigation required is identified in each specific plan's EIR.

Seismic, Geologic, and Soil Hazards

The San Francisco Bay Area is a seismically active region with numerous active faults. No active faults run through the City, although several are present in the surrounding region. Geologists with the U.S. Geological Survey and other agencies foresee a 62 percent probability of a magnitude 6.7 or greater earthquake in the San Francisco Bay region before 2032. Seismic, Geologic, and Soils Hazards are more specifically addressed in each specific plan's EIR.

Flooding

The principal surface water drainages in the City are the San Tomas Aquino Creek, Saratoga Creek, and Calabazas Creek, which all originate in the Santa Cruz Mountains and drain northward across the urbanized Santa Clara Valley floor before discharging into the San Francisco Bay. All of these creeks have been channelized and substantially modified to reduce flood hazards in the City. The City's storm drain system is managed by the City of Santa Clara Public Works Department and consists of curb inlets that collect and channel surface water into a series of pipelines beneath City public rights-of-way. Stormwater is conveyed through these underground pipelines to the channelized creeks within the City, which then flow into the San Francisco Bay. During severe storms, flooding can occur in localized areas along streams running through the City.

Flood zone mapping by the Federal Emergency Management Authority (FEMA) indicates that approximately ten percent of the City is located within a Special Flood Hazard Area (SFHA). None of the areas identified on the sites inventory/where housing development is approved/proposed are located in a SFHA.

Non-Governmental Constraints

Locally and regionally, there are several constraints that hinder the City's ability to accommodate the community's housing needs. The high cost of land, rising development costs, and neighborhood opposition make it expensive for developers to build affordable housing. These constraints may result in housing that is not affordable to low and moderate income households or may render residential construction economically infeasible for developers. While local government has little influence on larger market factors such as interest rates, its policies and regulations can act as constraints that affect both the amount of residential development that takes place and the affordability of housing.

Land Availability

In 2022, fewer than five acres of vacant parcels (including right-of-way properties) are zoned for residential or mixed use development throughout the City, including in the three focus areas for future development (El Camino Real, Lawrence Station, and Tasman East). Of those sites identified as appropriate for new housing, some are too small to accommodate higher density development unless combined with adjacent parcels. The City revised its General Plan designations in 2010, which were supplemented through the Specific Plan process, to encourage high-quality infill redevelopment that includes higher-density housing in addition to commercial businesses in some locations. According to the City of Santa Clara website, there are currently 64 development projects pending, approved, under construction or completed, with most projects clustered around El Camino Real, Lawrence Station, and Tasman East.

Community Resistance

Historically there has been community opposition to higher density residential infill development proposed along major transportation corridors, particularly when that development is located directly adjacent to long-established single-family neighborhoods. The relatively shallow depth of many of these properties can make the transition between existing low density single-family homes and proposed higher density residential challenging. Several substantial medium and high density developments have, however, been approved in spite of such opposition. Over the past 20 years, affordability for lower and moderate income households has not been the primary concern for community opposition to residential development. Instead, community resistance has been based on density, traffic impacts, and parking.

Approximately 247 acres of vacant and underutilized land has been approved, through adoption of Specific Plans, for new higher-density residential or mixed use redevelopment in three focus areas: Lawrence Station, Tasman East, and Patrick Henry Drive. Directing higher density housing to commercial areas, with convenient access to transportation and retail services, and separation from lower-density existing neighborhoods may reduce community opposition. City regulations

that require appropriate transitions between uses and densities, and adequate parking, could reduce some of community opposition to the approval of new housing.

In addition, the enactment of AB 680 in 2022 mandates ministerial approval along commercial corridors of most residential projects that meet the minimum density requirements of that bill. Such projects must provide an affordability component to qualify, such as 15% low-income units, but this affordability percentage is already mandated by the City's inclusionary zoning ordinance, and so all projects with at least 10 units will meet the affordability requirement of AB 680. Given that the City will no longer have the discretion to deny such projects, community resistance will not be able to stop such projects from going forward along commercial corridors.

National Construction Costs

Market constraints substantially influence the cost of housing and pose a challenge to providing housing affordable for all income levels. Land prices are typically the most significant component of the cost. The cost of land has increased rapidly over the past decade. Construction costs and fluctuating interest rates are also major contributors to the increasing cost of housing in the San Francisco Bay Area.

Construction costs vary widely according to the type of development, with multi-family housing generally less expensive to construct than single-family homes. However, wide variation within each construction type exists depending on the size of the unit and the number and quality of amenities provided. Construction costs can be broken down into two primary categories: materials and labor. A major component of the cost of housing is the cost of building materials, such as wood and wood-based products, cement, asphalt, roofing materials, and pipe. The availability and demand for such materials affect prices for these goods. An indicator of construction costs is Building Valuation Data compiled by the International Code Council (ICC). The unit costs compiled by the ICC include structural, electrical, plumbing, and mechanical work, in addition to interior finish and normal site preparation. The data is national and does not consider regional differences and does not include the price of the land upon which the building is built. The national average for development costs per square foot for apartments and single-family homes in the first quarter of 2022 are \$150-\$500 per square foot depending on size and type, with an average of approximately \$200 per square foot.

For multi-family apartment buildings, the type of parking is a key variable in the overall cost of construction. For lower density buildings (2-4 story wood-frame buildings), in which surface parking is provided, construction costs are in the \$175 per square foot range. For projects that include structured parking, the garage construction costs add about \$20,000 per parking stall to the \$175 per square foot for the units. Site-specific constraints, such as flood hazards, could add additional costs if mitigations are required. Again, depending on the size and type of construction the national average is \$35,000 to \$65,000 per unit.

These costs also exclude the cost of land and soft costs, such as entitlements and financing. Reduction in amenities and the quality of building materials (above a minimum acceptability for health, safety, and adequate performance) could lower costs and associated sales prices or rents. In addition, prefabricated factory-built housing may provide for lower priced housing by reducing construction and labor costs. Another factor related to construction costs is development density. As the number of units increases, overall costs generally decrease due to economies of scale. The City's ability to mitigate high construction costs is limited without direct subsidies.

Fee Analysis

Below is a fee analysis for two single family and two multifamily scenarios that illustrate the approximate fees for the hypothetical projects. Some fees are project specific and will be calculated based on the project type, location, and narrative.

Table 13.5-8: Fee Analysis Scenarios

<p>Single-Family A new home on an empty lot in an existing neighborhood; no significant grading or other complicating factors</p> <p>Multi-Family A new multi-family project on an empty lot in an existing neighborhood; no significant grading or other complicating factors</p>	<p>Scenarios <i>Single-Family</i> Small: 2,600 residential sq ft Large: 5,000 residential sq ft *Assuming no parking</p> <p><i>Multi-Family</i> Small: 10,000 residential sq ft + 3,750 parking sq ft; 10 units Large: 93,750 residential sq ft + 40,000 parking sq ft; 100 units</p>

Hard Costs

Hard costs for a hypothetical 2,600 square foot home are about \$420 per square foot, while for a 5,000 square foot home they are about \$525 per square. For a hypothetical small multi-family unit, the hard costs are \$415 per square foot, and \$425 per square foot for a large multi-family unit.

Soft Costs

Soft costs are generally assumed to be around 30% of hard costs (plus 5% contingency). Generally, single family soft costs are \$133 per square foot for small and \$147 per square foot for large. Multifamily soft costs range between \$165 and \$159 per square foot.

Land Costs

According to the California Building Industry Association, the cost of land represents a substantial portion of the total housing development cost but has little impact on the maintenance and improvement of existing stock. In many markets, up to 25 percent of housing costs are attributable to land costs. The average land costs in California are significantly higher than land costs in other states.

Land costs for single family homes are between \$210,000 and \$2,510,000. Land costs for apartments and condos range between \$400,000 and \$1,600,000. Due in large part to limited land availability in the City, residential land has not been widely available for sale. High costs will continue to present challenges for the production of affordable housing in the City.

Availability of Financing

The availability of financing affects a person's ability to purchase or improve a home. The primary concern in a review of lending activity is to see whether home financing is generally available in the community. Financing new residential development can be a significant cost; however, residential financing for both single family and multiple family housing is generally available. Developers of single-family projects often secure loans for land acquisition, installation of improvements, and construction. Land acquisition and development loan rates are typically the prime rate plus 0.5 to 2 percent, which is currently, in 2022, between 3.99 to 5.4 percent. Mortgage rates were low for previous years but are now increasing. Apartment loan rates are generally lower. Developers of affordable housing face significant challenges in securing financing. Due to the limited possible return from rents or sales prices of affordable units, many private lenders are unable to finance affordable projects due to the rate of return. Thus, affordable developers must rely on community lending divisions, nonprofit institutions, grants and special loans, and local assistance.

Chapter 13.6

Housing Resources

This section analyzes the resources available for the development, rehabilitation, and preservation of housing in Santa Clara. This includes an evaluation of the availability of land resources, the City's ability to satisfy its share of the region's future housing needs, the financial resources available to support the provision of affordable housing, and the administrative resources available to assist in implementing the City's housing programs.

Availability of Sites for Housing

A critical component of the Housing Element is the identification of land suitable for residential development including vacant sites and sites having the potential for redevelopment. Santa Clara is a highly urbanized community that has very little vacant, uncommitted land for new development. The following discussion summarizes the residential growth potential in each of these areas and concludes with an assessment of how these sites can address the City's share of regional housing needs.

Regional Housing Needs Allocation (RHNA)

California General Plan law requires that every city and county have properties appropriately zoned to accommodate their fair share of regional housing need. The California Department of Housing and Community Development (HCD) allocates a numeric regional housing goal to the Association of Bay Area Governments (ABAG). ABAG is then mandated to distribute the numerical goal among the cities and counties in the region. This share is known as the Regional Housing Needs Allocation (RHNA). The RHNA process' goal is to ensure a fair distribution of new housing construction among cities and counties in the region so that every community may plan for a mix of housing types for all economic segments. The housing allocation targets are not building requirements; rather, they are planning goals for each community to accommodate through appropriate planning policies and land use regulations. Allocation targets are intended to ensure that adequate sites and zoning are made available to address anticipated housing demand during the Housing Element planning period.

The sixth cycle RHNA for the ABAG region covers an eight-year planning period (January 31, 2023 – January 31, 2031) and is divided into four income categories: very low, low, moderate, and above moderate. HCD determined that the projected housing need for the Bay Area region (including the counties of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, and Sonoma) is 444,176 new housing units for this Housing Element planning

SANTA CLARA HOUSING ELEMENT

period. As determined by ABAG, the City of Santa Clara's allocation for the 2023-2031 planning period is 11,632 housing units, with the units distributed among the four income categories as shown in Table 13.6-1.

Table 13.6-1 City of Santa Clara RHNA 2023-2031

<i>Income Group</i>	<i>Income Category (% AMI)</i>	<i>RHNA (Housing Units)</i>	<i>Percentage of Total Housing Units</i>
Very Low	<50%	2,872	25%
Low	50-80%	1,653	14%
Moderate	80-120%	1,981	17%
Above Moderate	>120%	5,126	44%
Total		11,632	100%

Source(s): Final Regional Housing Needs Allocation (RHNA) Plan: San Francisco Bay Area, 2023-2031, Updated March 2022.

Note(s):

1 AMI = Area Median Income

2 Pursuant to AB 2634, local jurisdictions are required to project the housing needs of extremely low-income households (0-30% AMI) and consider this income group a subset of the very low-income category. In estimating the number of extremely low-income households, a jurisdiction can use 50% of the very low-income allocation or apportion the very low-income figure based on Census data.

Progress Toward the RHNA

Since the RHNA uses June 30, 2022, as the baseline for growth projections for the 2023-2031 Housing Element planning period, jurisdictions may claim units approved and proposed that are anticipated to be complete (have a Certificate of Occupancy) after June 30, 2022.

Approved and proposed residential development projects credited toward the RHNA include a variety of affordable and market-rate projects in various stages of the development process. Most of these projects are concentrated within Specific Plan areas and along major thoroughfares, where residential development is expected to continue throughout the planning period. These projects are credited toward the RHNA based on the affordability and unit count of the development. Combined, a total of 11,946 units are expected to be completed within the planning period, as shown in Table 13.6-2.

Approved Projects

Approved residential development projects credited toward the 2023-2031 RHNA have been reviewed for compliance with applicable Codes and regulations and have received planning entitlement approval. These projects will proceed through the building permit application review, issuance, and construction process with anticipated completion and occupancy permits to be finalized on or after June 30, 2022.

Pending or Proposed Projects

Six projects in various stages of planning review are included as proposed projects. These sites are included although there is no certainty those units will be achieved because the proposals have not been approved, are currently under staff review, or are pending a formal application submittal. The identified realistic capacity for these sites is the total units included in the preliminary proposals.

To help ensure that pending and proposed projects will complete the development process and result in new units, the City has included an additional ongoing objective under Action 10, Adequate Sites Inventory. The Planning Division will included a narrative and table within the City's Annual Progress Report that describes the status of projects listed in Table 13.6-2, Pending and Approved Projects, and when an entitlement is nearing expiration, the Planning Division will proactively notify applicants to apply for an extension.

In Addition, the Zoning Code Update will allow administrative extensions for entitlements Development approvals are generally permitted for 2 years initially, and then two 1-year administrative extensions are allowed, which saves time and eliminates that possibility of adding conditions. The current process requires going through entitlement process again for extension.

The administrative time extension process has been added to Action 9, Zoning Ordinance.

Since there is no guarantee that the projects will be approved or developed, in the case a proposed development falls through, the sites are still available to accommodate those identified units and may be able to count toward the lower-income RHNA depending on site density and size. Affordability for these projects is assumed based on the site's location per Specific Plan requirements, the City's inclusionary housing ordinance requirements, or a developer/affordable housing agreement. The status of the following projects is as of December 2022.

As shown in Table 13.6-2 below, the total of all pending and approved projects is 12,216 units, which is 584 units more than the City's total RHNA of 11,632 units. Because the majority of pending and approved projects fall within the above moderate affordability category (10,273 units), the City has a remaining RHNA of 4,563 units in the very low, low, and moderate affordability categories.

HOUSING ELEMENT

Note(s): All calculations were rounded down. There are likely discrepancies due to rounding down between the row and column totals.

1 Phase I building permit issued 4/18/22 for 311 units; the remaining 192 units are approved.

2 Application expected early 2023.

3 Application expected early 2023.

Sites Inventory Methodology and Assumptions

Default Density Assumptions

The California Government Code states that if a local government has adopted density standards consistent with the population-based criteria set by State law (at least 30 units per acre for Santa Clara), HCD is obligated to accept sites with those density standards (30 units per acre or higher) as appropriate for accommodating the jurisdiction's share of regional housing need for lower-income households. Default density is considered by the State as sufficient to provide market-based incentives for the development of housing for lower-income households.

The Santa Clara General Plan (adopted in 2010) identifies ten Focus Areas appropriate for higher density residential and mixed-use development. A detailed discussion of density assumptions and the affordability level of sites is included below.

Site Suitability and Lot Consolidation

Consistent with Housing Element law related to the suitability of small and large sites, the inventory of lower-income sites is limited to parcels between 0.5 and 10 acres in size. Due to the City's historical parcelization pattern, the inclusion of small sites in the inventory is expected. To adhere to State law and HCD guidance, small sites (under 0.5 acres) are not used to meet the lower-income RHNA. There are 10 available sites included in the inventory with a parcel size under 0.5 acres. All of these are located in the Tasman East Specific Plan area and range between 0.458 and 0.482 acres. Parcels of similar size have been developed with residential within the last housing element cycle in the Tasman East Specific Plan area. While these sites have densities that are appropriate for lower-income RHNA sites and meet the default density standard, they are all credited toward the moderate- and above moderate-income categories. No sites in the inventory are larger than 10 acres. Although many of the parcels identified as sites are adjacent to one another, no lot consolidation is assumed.

Realistic Capacity and Suitability of Non-Vacant Sites

Housing Element law requires jurisdictions to demonstrate that the land inventory is adequate to accommodate that jurisdiction's share of the region's projected growth. Santa Clara has a remaining RHNA of 4,563 units to be achieved through the identification of sites. The City has various residential and mixed-use development opportunities on sites that are currently available, although all sites are non-vacant. All available sites are within Specific Plan areas. Each project shown in Table 13.6-3, demonstrates that the project's actual density was developed higher than the minimum density allowed. Because each Specific Plan has its own distinct land

SANTA CLARA HOUSING ELEMENT

use designations and affordability requirements, realistic capacity for available sites was calculated based on the average of percent above minimum density allowed per Specific Plan of existing and approved projects (see Table 13.6-3). Percent above the minimum density allowed was used to remain conservative, realistic, and to account for the wide range of Specific Plan densities allowed (from 20 du/ac in Lawrence Station to 350 du/ac maximum in Tasman East). In every case, claiming realistic capacity using the methodology and assumptions defined here yields total unit counts below the maximum density allowed.

State law also includes specific criteria for assessment of the realistic availability of non-vacant sites during the planning period. If non-vacant sites accommodate half or more of the lower-income need, the Housing Element must present “substantial evidence” that the existing use does not constitute an impediment to additional residential use on the site. Due to the built-out nature of Santa Clara, most sites have existing uses. Non-vacant sites included in the inventory have been selected using the following criteria, which are indicated for each non-vacant site in the detailed sites matrix included in Appendix B. A site identified under criterion 1, 2, or 3 requires no further factors. These criteria have been applied to all available sites (this does not include pending project sites).

- 1) Interest: Developer interest or property owner interest to redevelop the site.
- 2) Vacant Lots: Completely vacant lot.
- 3) City or County Ownership: Property is under City or County ownership, with defined intent to redevelop the site with a residential use at a higher density.
- 4) Redevelopment Trend for Existing Use: Uses that are similar to those that have been previously recycled in Santa Clara (e.g., industrial uses, small shopping centers, offices, stand-alone restaurants and retail uses, properties zoned exclusively for residential use that are currently developed well below the zoning capacity).
- 5) Participation in Specific Plan planning process: Property is located within a defined Specific Plan area and/or the property owner participated in the Specific Plan planning process.
- 6) Underutilized Residential Site. Property is zoned for residential use at a higher density than existing use or property is zoned residential and existing use is non-conforming.
- 7) Building/Land Value: Property improvement value is less than half of the land value (ratio is less than 1.00), indicating substantial underinvestment and the ability of a property owner to achieve financial gain through redevelopment.
- 8) Year: Structure was built prior to 1985 (and therefore over 36 years of age) but is not a designated or eligible historic structure, indicating that properties may need substantial improvements or replacement for maximum financial return.

- 9) Lease: Site has no existing tenant lease(s) or lease(s) expires or lease(s) have buy-out clauses within in 6th cycle planning period (where known).

Development Trends and Realistic Capacity

Current development trends in the Specific Plan areas show that a range of medium to high residential density is feasible, realistic, and appropriate to accommodate housing for all income levels. Since the City's adoption of the Lawrence Station Area Plan and Tasman East Specific Plan, Santa Clara has seen an uptick in development and development interest. The following projects, shown in Table 13.6-3, show examples of high-density development coming in well above the minimum densities.

Table 13.6-3 High-Density Projects in Specific Plan Areas

<i>Project Name</i>	<i>Zoning</i>	<i>Density Range (du/ac)</i>	<i>Acres</i>	<i># of Units</i>	<i>Actual Density</i>	<i>Status</i>	<i>Included in 6th Cycle</i>	<i>% above allowed minimum density</i>

Realistic Capacity Calculations

These sites show sufficient capacity to meet and exceed the identified housing need. A detailed listing of sites, consistent with State law, is included in the document Appendix B.

Consistent with HCD Guidelines, the following methodology for determining realistic capacity on each identified site must account for land use controls and site improvements.

- Lower-density residential sites: realistic capacity for sites in land use designations that allow less than 30 units per acre is calculated at minimum density allowed. This includes the Medium Density Residential (20-36 du/ac) designation in the Lawrence Station Area Plan. The identified sites in these designations are non-vacant. Minimum density was used to calculate a more conservative realistic capacity.
- El Camino Real rezoning sites: As part of the Zoning Ordinance Update process, sites along the El Camino Real corridor that have a Regional Mixed Use General Plan land use designation (37-50 du/ac) will be rezoned from their current commercial zoning to the new Regional Mixed Use (RMU) zoning district. These sites are non-vacant, and the minimum density was used to calculate realistic capacity.
- Specific Plan sites: All sites within adopted Specific Plan areas have been thoroughly vetted through City-led and community-focused planning processes. Specific Plan areas represent locations with opportunities for more intense development with limited impact on existing neighborhoods, per the City's 2010-2035 General Plan. All available sites within the Specific Plan areas have been rezoned to reflect the uses and densities set forth in the respective Specific Plans. These sites were selected for inclusion in this inventory due to their location, existing zoning that accommodate and incentivize higher densities, and potential for housing production.

The following Specific Plan sites were excluded from the sites inventory because it was determined that they are unlikely to redevelop with residential uses within the timeframe of the Housing Element:

- Lawrence Station Area Plan
 - 2960 – 3030 Corvin Drive (data centers)
 - 3350 – 3420 Central Expressway (Gemini Rosemont industrial campus)
- Tasman East Specific Plan
 - 5101 Lafayette Street (data center)
- Patrick Henry Drive Specific Plan
 - 4650 and 4700 Old Ironsides Drive (data centers)
 - 4600 Patrick Henry Drive (Drawbridge parcel)

Each project shown in Table 13.6-3, demonstrates that the project's actual density was developed higher than the minimum density allowed. Because each Specific Plan has its own distinct land use designations and affordability requirements, realistic capacity for available sites within the Lawrence Station Area Plan and Tasman East Focus Area

SANTA CLARA HOUSING ELEMENT

Specific Plan were calculated based on the average of percent above minimum density allowed per Specific Plan of existing and approved projects (see Table 13.6-3).. In every case, claiming realistic capacity using the methodology and assumptions defined here yields total unit counts below the maximum density allowed.

The following averages were used to calculate realistic capacity, per Specific Plan area:

- Lawrence Station Area Plan: minimum densities x 191%
 - The minimum density for the two remaining LSAP parcels designated Very High Density Residential (VHDR) is 51 du/ac. 191% of 51 du/ac = 97.4 du/ac. The four approved/under construction LSAP projects that are designated VHDR have actual densities ranging from 73 to 134 du/ac, with an average of 97.5 du/ac.
- Tasman East Focus Area Specific Plan: minimum densities x 215%
 - The minimum density for the remaining Tasman East parcels designated Transit Neighborhood (TN) is either 60 du/ac (13 parcels < 1 ac) or 100 du/ac (one parcel ≥ 1 ac). 215% of 60 du/ac = 129 du/ac and 215% of 100 du/ac = 215 du/ac. The six approved/under construction Tasman East projects, including two 100% affordable projects, that are designated TN have actual densities that range from 131 to 237 du/ac.
- Patrick Henry Focus Area Specific Plan: maximum densities x 72%
 - Based on Specific Plan assumptions about buildout phasing was used as there is currently only one approved project in the Patrick Henry Drive Specific Plan area.
 - Specific Plan Approved Residential Development Capacity: between 10,300 and 12,000 units (Average 11,150 units)
 - Specific Plan Buildout Estimate: 8,073 units (72% of 11,150)
 - Phase 1 (2025-2029): 5,839 units
 - Phase 2 (2030-2034): 2,234 units
 - Housing Element (2023-2031): 5,865 units (1,520 pending/approved + 4,345 sites)
 - Ten remaining Patrick Henry Drive sites have maximum densities of 149 du/ac, one site has a maximum density of 250 du/ac, and one site has a maximum density of 99 du/ac.

- 72% of 149 du/ac = 107 du/ac. One approved Patrick Henry Drive project has a density of 122 du/ac (Summerhill). There are pre-applications on file for projects on two other sites that have proposed densities of 123 du/ac (Sares Regis) and 148 du/ac (Walnut Hill).

For the Lawrence Station area, the realistic capacity of the remaining sites is a total of 395 units (144 VLI, 106 LI, 126 Mod, and 19 Above Mod). See Table 13.6-5. The buildout horizon for these units falls within the 6th cycle.

For the Tasman East Specific Plan area, the realistic capacity of the remaining sites not tied to approved or proposed projects is 1,123 units, per Table 13.6-5. When combined with the number of units already proposed or on file, the total number of units is 989 units greater than the total number of units approved as a part of the adoption of the Tasman East Specific Plan. The City is currently processing a Specific Plan amendment to increase the capacity of the plan area by an additional 1,500 units. That effort is recognized as Action 19, Tasman East Specific Plan Amendment in the Housing Plan. The buildout horizon for these units is 2030.

For the Patrick Henry Drive Plan area, sites totaling 4,345 units are available during the planning period. Additionally, 1,520 units have either been proposed or approved in the Patrick Henry Drive area.

Given the fact that housing in all the City's Specific Plan areas is allowed by right, the primary impediment to development of housing, according to feedback received from developers at stakeholder meetings, is the economic environment (construction and land costs) and the ability for developers to obtain financing and/or state funding (for affordable projects). Another potentially significant impediment is the provision of infrastructure, which has been addressed in the Tasman East and Patrick Henry Drive plan areas through the creation and administration of infrastructure fees for the respective areas. For the few remaining projects not yet built in the Lawrence Station Area, required infrastructure improvements will be addressed through the development review process.

Densities Appropriate for Accommodating Lower-Income Housing

The capacity of sites that allow development densities of at least 30 units per acre are credited toward the lower-income RHNA based on State law. The California Government Code states that if a local government has adopted density standards consistent with the population-based criteria set by State law (at least 30 units per acre for Santa Clara), HCD is obligated to accept sites with those density standards (30 units per acre or higher) as appropriate for accommodating the jurisdiction's share of regional housing need for lower-income households. All available sites included in this inventory, except for three sites zoned Medium Density Residential (20-36 du/ac), have density standards of 30 units per acre or higher. Located within the Lawrence Station Area Plan, the three sites zoned Medium Density Residential (20 – 36 du/ac) are credited toward the moderate- and above-moderate income categories.

To create a more conservative and realistic estimate of affordability for Santa Clara, available sites that qualify for one hundred percent affordable units based on the allowed density are split between the very low-, low-, and moderate-income categories 40 percent, 30 percent, and 30 percent, respectively, which roughly follows the RHNA split for those same affordability categories.

Table 13.6-4 Specific Plan Land Use Designations

<i>Land Use Designation</i>	<i>Min./Max. Density</i>	<i>Meets Default Density</i>	<i>Number of Parcels Included in 6th Cycle</i>	<i>Total Acreage of Available Sites</i>
Tasman East Focus Area Specific Plan

Note: 1. The Patrick Henry Drive site designated Village Residential includes 26 parcels for each condominium unit and an approximately 6.8-acre common area parcel (shared parking/circulation).

Re-use of Sites

AB 1397 (2017) requires that specific parameters be placed on sites that were used in previous Housing Element planning cycles but did not develop and are identified in the current Housing Element to meet the lower-income RHNA. However, as noted in HCD guidance documents, due to updates in the prior planning period to the General Plan or other planning activities, such as the creation of a specific plan, some sites previously identified in the Housing Element may have been rezoned during intervening years to allow a higher density, thereby increasing the potential housing capacity of the site. Because the zoning characteristics of such a site have changed, that site can be considered a new site for the purposes of the housing element inventory.

All sites, apart from several of the El Camino Real Rezoning sites, in this Housing Element are Specific Plan parcels, including some previously identified in the fifth cycle. Parcels identified in the fifth cycle subsequently rezoned to a higher density through their respective Specific Plan processes were not rezoned to accommodate a shortfall; rather, the rezoning was conducted to implement General Plan policy. Thus, no sites, except for those El Camino Real rezoning sites noted in Appendix B, are subject to the reuse provisions of AB 1397 (2017).

For sites that are subject to the reuse provisions of AB 1397 (2017), the Zoning Ordinance update (Chapter 2 Housing Plan Action 9) will include a provision that any nonvacant site in the 6th Cycle Housing Element Sites Inventory that was identified in a previous (i.e., 5th or 4th Cycle) Housing Element would need to provide a minimum of 20 percent of the units affordable to lower income households in order to be approved by right.

No Net Loss Provision

Government Code Section 65863 stipulates that a jurisdiction must ensure that its Housing Element inventory can accommodate its share of the RHNA by income level throughout the 2023 to 2031 planning period. If a jurisdiction approves a housing project at a lower density or with fewer units by income category than identified in the Housing Element, it must quantify at the time of approval the remaining unmet housing need at each income level and determine whether there is sufficient capacity to meet that need. If not, the city must “identify and make available” additional adequate sites to accommodate the jurisdiction’s share of housing need by income level within 180 days of approving the reduced-density project. This provision is commonly referred to as the “no net loss” provision of Housing Element law.

Site Selection

The Housing Element sites inventory, in addition to the list of pending and approved projects, includes accessory dwelling unit (ADU) projections, underutilized sites within Specific Plan areas zoned for high-density residential and mixed-use development, and the El Camino Real rezoning sites. These latter two categories have been used to demonstrate that the RHNA for the extremely low-, very low-, low- and moderate-income categories can be accommodated during the planning period. As the discussion below concludes, the sites have no identified constraints that would prevent development or reuse during the Housing Element period. Table 13.6-5 summarizes the sites inventory.

Table 13.6-5 Sites to Meet the RHNA

<i>Site/Credit Type</i>	<i>Affordability Category</i>				<i>Total Capacity</i>
	<i>Very Low [0-50% AMI]</i>	<i>Low [50-80% AMI]</i>	<i>Moderate [80-120% AMI]</i>	<i>Above Moderate [above 120% AMI]</i>

Note(s): AMI = Area Median Income

ADU Projection

Since 2017, the State legislature has passed a series of laws that significantly increase the potential for the development of ADUs and Junior ADUs (JADUs) by removing development barriers, allowing ADUs through ministerial permits, and requiring jurisdictions to include programs in their housing element that incentivize ADU development. Interest in constructing ADUs is high in Santa Clara and continues to grow. In 2018, the City issued 21 ADU building permits. In 2019, the number increased to 51 annual building permits, with similar numbers in 2020 (45 ADU building permits) and 2021 (53 ADU building permits), then increasing in 2022 to 76 ADU building permits. This represents a 262 percent increase in ADU production in Santa Clara between 2018 and 2022. The City estimates that interest will continue to increase over the next few years, given the many single-family neighborhoods citywide that create capacity for additional ADUs. As of June 2022, 53 percent (or 16,103 parcels) of total parcels were zoned for single-family housing, totaling 2,504 acres. ADUs are permitted on single-family, multi-family, and mixed-use lots, including R1, R2, and R3 zone districts, which represent a significant number of lots in Santa Clara.

As an incentive to ADU production, the City does not charge a Planning fee for review/processing ADU requests. Also, State law allows jurisdictions to charge impact fees on ADUs over 750 square feet, but the City of Santa Clara does not. The City has also exempted ADUs/JADUs from providing parking (JADUs that convert a garage space/s are required to provide replacement parking for the primary dwelling).

The slight dip in ADU production in 2020 may be due to the COVID-19 pandemic and other events of 2020. In 2022, the City had the highest number of ADU building permits to date, which is likely more representative of ADU production moving forward based on ADU trends in Santa Clara, new and pending favorable ADU legislation that created new incentives and streamlined processes to build ADUs, and the pent-up demand for additional housing in the Bay Area.

SANTA CLARA HOUSING ELEMENT

While it is impossible to predict with certainty the exact number of ADUs that will be developed during the planning period (2023-2031), the City conservatively estimates:

- An average of 49.2 ADUs per year will be constructed throughout the planning period. This reflects the average number of building permits issued for ADUs between 2018 and 2022. Given the anticipated increase in ADUs over the near term, this is a conservative estimate.
- A total of 393 ADUs can be predicted to be constructed during the planning period.

The affordability assumptions for ADU projections are based on ABAG's ADU affordability analysis pre-certified by HCD¹.

Available Specific Plan Sites

Plan Bay Area 2050 Growth Geographies

After nearly four years of technical analysis and deep engagement with Bay Area residents and partners, the Metropolitan Transportation Commission (MTC) and ABAG jointly adopted Plan Bay Area 2050 in October 2021. Plan Bay Area 2050 was developed in collaboration with Bay Area residents, partner agencies, and nonprofit organizations. Thirty-five strategies make up the heart of the plan to improve housing, the economy, transportation, and the environment across the Bay Area's nine counties.

Throughout Plan Bay Area 2050, Growth Geographies are geographic areas used to guide where future growth in housing and jobs would be focused under the plan's strategies over the next 30 years. These geographies are identified for growth either by local jurisdictions or because of their proximity to transit or access to opportunity.

All sites included in this Housing Element are considered Priority Development Areas (PDAs), defined as areas generally near existing job centers or frequent transit that are locally identified (i.e., identified by towns, cities, or counties) for housing and job growth.

2010-2035 General Plan Focus Areas, Focus Area Plans, and Related Planning Efforts

In 2010, the City of Santa Clara adopted its comprehensive 2010-2035 General Plan, which included identification of nine focus areas throughout the City, listed in Table 13.6-6. These areas were chosen for their potential to significantly define Santa Clara's identity as a place in transition from a suburb to a regional economic center. The opportunity to develop at a higher density near transit is central to this new identity.

¹ ABAG estimates an affordability breakdown of ADUs as follows: 30% very low-income, 30% low-income, 30% moderate-income, and 10% above moderate-income. Technical Assistance for Local Planning, Housing – Using ADUs to Satisfy RHNA, Technical Memo, March 2022.

A comprehensive plan, such as a specific plan is a required prerequisite for new residential development within a focus area. The purpose of these plans and the prerequisite requirements ensure that new neighborhoods are self-sufficient, with easy access to retail, services, and public amenities. Specific Plans also ensure that adequate public services and facilities are provided in tandem with new development. In 2014, the City initiated updates to the Housing and Land Use Elements that identify and require future development to be comprehensively planned through the preparation of Specific Plans within the Lawrence Station and Tasman East Focus Areas.

Of the nine focus areas identified in the 2010-2035 General Plan, four have resulted in Specific Plans, three of which have been adopted. The Freedom Circle Future Focus Area was added to the General Plan in June 2022, while preparation of this sixth cycle Housing Element was well underway. A specific plan has not been drafted or adopted for this future focus area, and therefore the future focus area, with the exception of the Greystar site that had its own approved General Plan Amendment and Rezoning to allow residential development, was not included in the sites inventory. However, properties within that planning area could become available during the planning period if a specific plan were adopted, helping to guard against the loss of affordable housing capacity.

Mixed-Use Developments

SANTA CLARA HOUSING ELEMENT

Although opportunities for residential and mixed-use development exist throughout Santa Clara based on existing General Plan land use policy and implementing zoning, along major corridors such as along El Camino Real, the City has focused the sites inventory in areas where development of residential uses is most likely to occur within the Housing Element planning period. This is due to development standards allowing very high densities, developer interest in residential development within Specific Plan areas, site size and location (near transit, major corridors, and highways), and recent development trends in the immediate and surrounding areas. The inclusion of nonresidential uses within mixed-use developments complements a transit-oriented neighborhood and will not affect the potential capacity on site because all available sites have minimum density requirements.

Most parcels included in this sixth cycle sites inventory have zoning that allows nonresidential uses in the form of mixed-use developments. Only one land use designation/zone district allows stand-alone nonresidential development.² This land use policy illustrates the City's commitment to incentivizing mixed-use districts and higher-density, transit-oriented residential development that addresses many goals: meeting the region's housing needs, encouraging housing near employment centers, increasing transit usage, and reducing greenhouse gas emissions.

Specific Plans

A considerable portion of Santa Clara is designated for specific plan development. The City has three approved Specific Plans with a significant number of sites and residential development capacity remaining. Combined, the sites identified in the Lawrence Station, Tasman East, and Patrick Henry Drive Specific Plan areas have enough capacity to satisfy the outstanding RHNA (i.e., the remaining RHNA after pending and proposed projects, and ADUs). The Specific Plan areas provide opportunities for development of market-rate and affordable housing. Development types authorized by the approved Specific Plans include multi-unit and mixed-use development. None of the listed Specific Plan areas have any site restrictions or governmental constraints that would impede development. Table 13.6-4 provides an overview of the City's Specific Plan densities. Further detail is provided in the following sections.

The Specific Plan sites have a high level of certainty to develop given that:

- Through the adoption and implementation of each City-initiated Specific Plan, all parcels within each area have been re-zoned to accommodate high density residential development.
- Specific parameters for densities, uses, development standards, and minimum affordability requirements have already been established.

² Only one land use designation/zone district, in the Patrick Henry Drive Specific Plan area, allows stand-alone nonresidential development. See section "Specific Plan Sites" for additional detail.

- No recent, significant enhancements have been made to these sites.
- Infrastructure is either in place, or planned for, in support of proposed land uses, addressing transportation, wet utilities, solid waste management, and energy services and systems. For both the Tasman East and Patrick Henry Drive Specific Plans, an infrastructure fee has been created to apportion costs between developers in the Plan Areas.
- Redevelopment of nonresidential uses into high density residential and mixed-use has already occurred, illustrating developer and property owner interest and the financial feasibility of site redevelopment.
- All land use designations within the Specific Plan areas have established minimum densities.
- No land use designation in the Tasman East Specific Plan or Lawrence Station Area Plan areas allows for stand-alone nonresidential uses.
- The City has financial resources available to support the development of affordable housing.

Affordability Requirements

- **Tasman East Focus Area Specific Plan.** All development in the Tasman East Focus Area Specific Plan area adheres to the affordable housing requirements referenced in Section 17.40.115 of the Santa Clara City Code. For-sale and rental affordable units shall be maintained as affordable housing for not less than 20 years applicable to for-sale units and 55 years applicable to rental units. Section 17.40.115 requires that 12% of total housing units be affordable.
- **Patrick Henry Focus Area Specific Plan.** In recognition of the conversion of employment uses to residential land, the Patrick Henry Drive Specific Plan calls for a deeper level of affordability than is required by the Citywide Affordable Housing ordinance. Affordable housing requirements for the Patrick Henry Drive Specific Plan are referenced in Section 17.40.116 of the Santa Clara City Code. Developments will provide 15 percent affordable units split equally between three affordability levels of 50 percent, 80 percent, and 120 percent of Area Median Income (AMI).
- **Lawrence Station Area Plan.** Projects must comply with the City's inclusionary ordinance in the Lawrence Station Area Plan area. There are some projects already developed that did not require affordable units, because the Lawrence Station Area Plan was adopted before the City's inclusionary ordinance.
- **Citywide Affordable Housing Requirements.** Effective February 2018, the City's inclusionary housing ordinance (Title 17, Chapter 17.40 Citywide Affordable Housing

SANTA CLARA HOUSING ELEMENT

Requirements) requires residential ownership and rental projects of ten (10) or more units to provide at least fifteen percent (15%) of the units at affordable housing costs for extremely low, very low, low and moderate income households, or some combination of those income categories. A developer shall select income categories for each of the affordable units such that the average income of purchasers will not exceed 100 percent of AMI.

- **Affordability by Design.** Additionally, affordability by design in Specific Plan areas is encouraged, with the development of smaller units targeted for those who desire a walkable, urban lifestyle.
- **General Plan.** The General Plan also outlines other Affordable Housing incentives including encouraging and supporting public and private efforts to provide affordable housing, density bonuses and other financial incentives for housing projects that include affordable and/or senior housing units, consistent with State law requirements.

**SANTA CLARA
HOUSING ELEMENT**

Tasman East Focus Area Specific Plan

Adopted in November 2018, the Tasman East Specific Plan regulates the development of 46.1 acres of land located near the City's northern boundary. Approved for the development of 4,500 units, full buildout of the area will likely occur by 2038. The Specific Plan area includes 34 parcels situated east of Lafayette Street, north of Tasman Drive, west of the Guadalupe River Trail, and south of the Santa Clara Tennis and Golf Club property. Each parcel of one acre or more in size is required to accommodate a minimum density of 100 dwelling units per acre. Each parcel of less than one acre in size is required to achieve a minimum density of 60 dwelling units per acre. There are no density maximums for individual parcels.

Approximately half of the Tasman East Specific Plan's parcels have either been re-developed or have projects with active applications or are already under construction. This area is transitioning from a mix of light industrial and business park uses to a high density residential neighborhood with a mix of uses at the ground floor.

Eleven projects within the Specific Plan area were counted toward the sixth cycle RHNA as approved, proposed, or under construction. Fifteen remaining parcels, on approximately 8 acres, have been identified as sites and remain to be re-developed. Not Viable sites were identified and excluded based on existing uses. Assuming realistic capacity, on a parcel-level, the Tasman East Focus Area Specific Plan sites identified in this Housing Element can accommodate a total of 1,123 units (see Table 13.6-5). Appendix B provides a detailed list of all sites, including assumed affordability.

Patrick Henry Drive Focus Area Specific Plan

In March 2022, the City Council approved the Patrick Henry Drive Specific Plan. The planning area encompasses approximately 73.59 acres bounded by Sunnyvale and Calabazas Creek to the west, the southern edge of San Francisco Public Utilities Commission right-of-way to the north, Great America Parkway to the east, and Mission College to the south. As one of the City's first high-density residential neighborhoods, Patrick Henry Drive will add thousands of units to better balance the City's jobs-housing ratio, a share of which will be income restricted to help meet regional and local affordability goals. Several regional destinations and amenities are nearby, including Levi's Stadium, Great America Theme Park, and the Santa Clara Convention Center. The VTA light rail station at Old Ironsides and Tasman Drive is just over one-half mile, or an approximately 10-minute walk, from the center of the Specific Plan area.

The Patrick Henry Drive Specific Plan resulted from a collaborative planning effort involving the City, area property owners, and the Santa Clara community. The plan will create a 73.59-acre high-density, residential neighborhood located near regional destinations, including job-centers, transit, and other amenities. At buildout, the project will accommodate up to 12,000 new residential dwelling units and 310,000 square feet of nonresidential uses, including 200,000 square feet of new neighborhood-serving retail and public facilities, such as libraries and community spaces. New and improved pedestrian and bicycle connections, trails, and parks will link neighborhoods and enhance connections to nearby amenities and recreation destinations. Careful planning will ensure adequate infrastructure and services to support the proposed new development. Targeted residential densities range from a minimum of 51 dwelling units per acre to a maximum of 250 units per acre. These densities will help meet the demand for housing that addresses job and retail growth in the City and region.

Three projects within the Specific Plan area were counted toward the sixth cycle RHNA as approved, proposed, or under construction. Twelve remaining parcels, on approximately 39.24 acres, have been identified as sites and remain to be re-developed. Not Viable sites were identified and excluded based on existing uses. Assuming realistic capacity, on a parcel-level, the Patrick Henry Drive Focus Area Specific Plan sites identified in this Housing Element can accommodate a total of 5,865 units (see Table 13.6-5). Appendix B provides a detailed list of all sites, including assumed affordability.

High Density Flex

Only one land use designation in the Patrick Henry Drive Specific Plan area allows for stand-alone nonresidential uses: High Density Flex. Six parcels are zoned High Density Flex, two of which were excluded because they are small sites and publicly owned utility parcels, owned by the Santa Clara Valley Transportation Authority (VTA) and the City of Santa Clara. APNs 104-04-130 and 104-04-072, respectively.

SANTA CLARA HOUSING ELEMENT

In the event that any of the four High Density Flex sites (totaling 9.6 total acres) develop with nonresidential uses only, the City will quantify at the time of approval the remaining unmet housing need at each income level and per law, identify and make available adequate sites to accommodate the RHNA by income level within 180 days of approving any such reduced-density project.

FIGURE 13.6-4 PATRICK HENRY LAND USE DIAGRAM

FIGURE 13.6-5 PATRICK HENRY SITES

Lawrence Station Area Plan

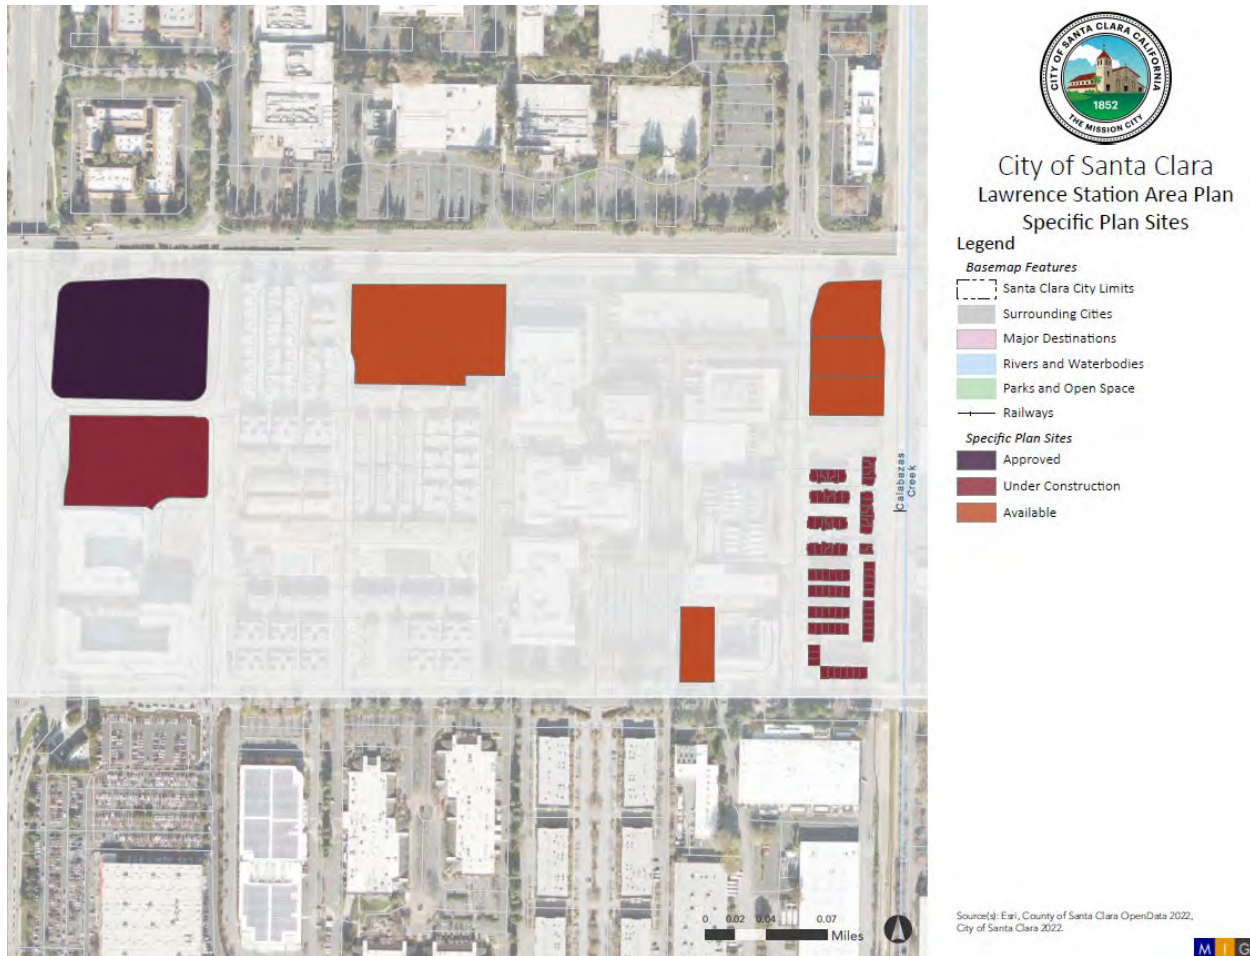

The Santa Clara Lawrence Station Area Plan Area is located northeast of the Lawrence Caltrain Station, bounded by Central Expressway to the north, Kifer Road to the South, Lawrence Expressway to the west, and Calabazas Creek to the east, encompassing approximately 72 acres (65 acres of developable land area excluding existing public right-of-way). Adopted in 2016, the Lawrence Station Area Plan is largely developed and was originally approved for the development of 3,500 units. Residential uses have replaced the areas original uses: one- and two-story buildings, generally occupied by light industrial (including manufacturing and warehousing uses), office, and various other commercial uses.

Four projects within the Specific Plan area were counted toward the sixth cycle RHNA as approved, proposed, or under construction. Five remaining parcels, on approximately 5.7 acres, have been identified as sites and remain to be re-developed. Not Viable sites were identified and excluded based on existing uses. Assuming realistic capacity, on a parcel-level, the Lawrence Station Area Plan sites identified in this Housing Element can accommodate a total of 395 units (see Table 13.6-5). Appendix B provides a detailed list of all sites, including assumed affordability.

Chapter 13.7

Housing Element Program Accomplishments

This chapter analyzes program performance for the City of Santa Clara's 2015-2023 Housing Element programs. State law (California Government Code Section 65588[a]) requires each jurisdiction to review its Housing Element as frequently as appropriate and evaluate:

- The appropriateness of the housing goals, objectives, and policies in contributing to the attainment of the state housing goals
- The effectiveness of the Housing Element in attainment of the community's housing goals and objectives
- Progress in implementation of the Housing Element

This evaluation provides critical information on the extent to which programs have achieved stated objectives and whether these programs continue to be relevant to addressing current and future housing needs in Santa Clara. The evaluation provides the basis for recommended modifications to policies and programs and the establishment of new housing objectives. The Department of Housing and Community Development determined that the Santa Clara 2015-2023 Housing Element was in full compliance with State law. Following adoption in 2015, the City was tasked with following through on the commitments made in the housing programs. The City has analyzed the effectiveness of the 5th cycle Housing Plan actions, policies, and goals and has used this evaluation to inform the revised Housing Plan for the 6th cycle. While the fair housing analysis conducted in Chapter 3 relied upon contemporary data, the retroactive analysis of past program accomplishments depended on data points collected during program actions that, in some cases, did not align directly with the data points collected during the fair housing analysis conducted for the 6th cycle.

Specific attention was given in the evaluation of the cumulative effectiveness of past goals, policies, and related actions in meeting the housing needs of special populations. In cases where data was not available, institutional knowledge and staff interviews were used to provide context for the program evaluation. Generally, the effectiveness of the action was evaluated in terms of the:

- number of individuals served
- cost of the program/action based on the benefit to the individual served
- availability of funding and resources
- efficiency and effectiveness of the program partners and service providers

SANTA CLARA HOUSING ELEMENT

- the ability to satisfy expressed AFFH requirements in the next cycle.

Overall, the programs that targeted households showed that services were provided to a number of special needs households such as the elderly, persons with disabilities, female-headed households, and persons experiencing homelessness. Indirectly, the jurisdiction made efforts to increase affordability via policies supporting varied types and tenures and increase the affordable housing stock that generally improved the availability of housing that variably resulted in serving special needs households. Although no specific data points exist for some of the 5th cycle programs, it is expected that the populations served under many of the direct service actions align with those programs that did collect data, as shown in the matrix below. Overcrowded households were not identified in the 5th cycle as a targeted demographic for specific action, nor was farmworker housing as there are no active farms in the City of Santa Clara and no Agricultural Land Use Designations beyond the allowed use of community or urban gardens. However, during community engagement, an effort was made to identify farmworker populations that could be commuting to other jurisdictions or retired farmworkers that would be eligible for farmworker housing.

Anecdotal and statistically, we know that overcrowding is increasing due to affordability pressures on all households and the most vulnerable special needs populations will require additional attention beyond tenant protections. Therefore, many of the new program goals, policies, and actions are informed not only by the 5th cycle evaluation but the fair housing assessment and community input collected during the authoring of the Housing Element. Further, the City participated in a regional Assessment of Fair Housing process led by Santa Clara County -during the development of this document and facilitated a local homelessness taskforce and outreach process in 2022. Analyzing the cumulative effectiveness of the 5th cycle Housing Plan actions, policies, and goals in conjunction with the additional analyses conducted in this document along with community engagement, has provided clarity and focus on the development of the 6th cycle Housing Plan.

Following the evaluation table, the quantified objective performance is summarized. For the next cycle, 2023-2031 the Actions have been reprioritized and will be reordered based on the updated goals, policies, and the integration of HCD's new Affirmatively Furthering Fair Housing requirements.

5th Cycle Housing Plan

Table 13.7-1: Goals and Policies

Goal A: Create and maintain high-quality, livable, and unique residential neighborhoods and preserve established single-family neighborhoods.

Policy A-1 Maintain and improve the quality of residential neighborhoods, eliminate housing deficiencies and prevent future blight through the encouragement of ongoing maintenance, rehabilitation and conservation of existing housing stock.

Policy A-2 Provide code enforcement support for residential neighborhoods in conformance with City Code and Zoning Ordinance regulations.

Policy A-3 Promote compatibility between neighborhoods while respecting differences in neighborhood character.

Policy A-4 Promote consensus with City Design Guidelines.

Goal B: Manage growth in the City by designating suitable vacant or underutilized sites for new residential development and ensuring compatibility with community goals and existing neighborhoods.

Policy B-1 Disperse affordable housing units throughout the City to avoid a concentration in any one neighborhood.

Policy B-2 Encourage the building of higher density housing on appropriate vacant or underutilized sites.

Policy B-3 Encourage the annual construction of the number of housing units necessary to meet the City's regional housing needs determination through housing finance and reducing development constraints.

Policy B-4 Promote compatibility between neighborhoods while respecting differences in neighborhood character.

Policy B-5 Work towards the mitigation of jobs/housing ratio impacts created by developments with significant employment.

Policy B-6 Encourage higher density residential development in transit-oriented and mixed-use areas where appropriate.

Policy B-7 Encourage a mix of unit types and sizes in new housing development.

Goal C Provide housing within the community for persons of all economic levels, regardless of religion, gender, sexual orientation, marital status, national origin, ancestry, familial status, source of income, or mental or physical disability.

Policy C-1 Construct and preserve affordable housing for lower and moderate-income households through the use of public subsidies, regulatory incentives and flexible development standards.

Policy C-2 Participate in local, regional, State and federal programs that support affordable, transitional, supportive and permanent housing.

Policy C-3 Create opportunities for affordable housing and housing to support special needs populations and extremely low-income households.

Policy C-4 Ensure equitable housing opportunities for all residents.

Goal D Provide an adequate variety of individual choices of housing tenure, type and location, including higher density where possible, especially for low and moderate income and special needs households.

Policy D-1 Promote a variety of housing types, indifferent locations to maintain social and economic diversity in the City.

Policy D-2 Participate in programs that provide support services to residents in need.

Policy D-3 Increase public outreach efforts to inform residents and potential developers of available City housing programs.

Table 13.7-1: Goals and Policies

Policy D-4 Encourage early participation from residents and other stakeholders in development of long-range plans and review of new development proposals.

Policy D-5 Ensure compliance with all State and federal regulations relating to housing opportunities and the prevention of discrimination.

Table 13.7-2: Actions and Objectives

Action	Program Title & Objective	Achievements/Results	Evaluation	Recommendation
Action 1	<u>Neighborhood Conservation Improvement Program (NCIP)</u> . Assist approximately 424 homeowners with rehabilitation assistance, including approximately 160 extremely low-income households (ELI). Continue to conduct inspections of homes on a request and complaint basis, providing referrals to the NCIP and assistance where possible to correct identified issues and problems. Policy A-1	2022: The City increased funding for smaller grant funded projects that address accessibility and minor repairs. 2018-21: The Housing and Community Services division increased funding for this program (approximately \$1 million annually) to assist more low-income and senior homeowners to improve the habitability, use and occupancy of owner-occupied housing. 2017: A NCIP Procedure Manual was updated and approved by the Loan Committee. 2015-16: An NCIP Procedural Manual is annually updated and approved by the Loan Committee.	Since 2014, the program has assisted over 121 low-income households of which 53 were seniors, and 37 were female headed households, and 11 were disabled.	Continue to offer these services, every two years the City could conduct proactive outreach to low-income homeowners who are elderly, have disabilities, or have large households. Renumbered and Renamed to Action 4: Maintenance of Housing Stock
Action 2	<u>Preservation of Assisted Rental Housing</u> . Continue to assist property owners of assisted housing by providing funding to make periodic improvements to the property, if available. Such assistance helps the project maintain its affordability.	Since 2014 the city has assisted with the preservation of Riverwood Place (146 units) by restructuring an existing City loan to allow for improvements and to extend affordability by 18 years. The City also helped preserve the 42-unit Westwood	Both projects serve lower income families	Continue to explore ways to preserve housing that serves a variety of groups pending

	markets, rehabilitate units, and convert from market rate to affordable levels. Policy B-1, Policy C-1, Policy C-2, Policy C-3, Policy D-1	projects in Santa Clara, with three projects currently in the pipeline. 2019-20: The City of Santa Clara has worked with Riverwood Place Associates, L.P. (MidPen Housing Corporation) to extend the affordable housing requirements for 148 rental units within the project located at 5090 Lick Mill Boulevard. MidPen approached the City of Santa Clara with a proposal to fund a solar panel installation as solar provides a great opportunity for long-term sustainability and cost savings. The estimated capital cost was estimated to be around \$680,000. MidPen Housing also proposed, as part of the financing strategy, to modify the terms of the City's existing Promissory Note. Whereas the original Promissory Note entitled the City to 75% of residual cash flow receipts, the proposed modification would entail a conventional 50/50 split of residual receipts between the City and MidPen. In exchange for the requested modification, the City requested to increase the interest rate to 2% from the original 0% and to extend the affordability covenants maturity date from March 14, 2056 to March 14, 2074, thereby preserving 148 studio apartments serving special needs adults for an additional 18 years. 2015-17: The City seeks opportunities to occupy deteriorated properties that, during times of depressed rental markets, cannot raise sufficient capital to rehabilitate. This is an active City program. These units are then converted to affordable units.		Renumbered to Action 6

Table 13.7-2: Actions and Objectives

Action	Program Title & Objective	Achievements/Results	Evaluation	Recommendation
Action 4	<u>Code Enforcement Program -</u> Continue the multi-family residential housing inspection and educational programs. Aggressively respond to violations of housing codes. Provide special attention to maintaining the stability of residential neighborhoods through development and enforcement of minimum standards of allowed use of the City's streets, as well as maintenance of front and other yard areas visible from the public right-of-way. Policy A-1, Policy A-2, Policy A-3, Policy A-4	City has three full time code enforcement technicians and one building inspector dedicated to code enforcement. Program has been successful in removing blight and substandard housing. Outreach

Summary

As part of the Housing Element update draft a Public Engagement Plan (PEP) was developed by City staff to provide the community public participation opportunities during the development of the Housing Element under Gov. Code Section 65583 (c)(9). Additionally, the City set up a housing element webpage: <https://www.santaclaraca.gov/our-city/departments-a-f/community-development/planning-division/general-plan/housing-element-update>; that provided continual updates as work on the 6th Cycle Housing Element progressed. The list-serv generated by this effort has 1,500 subscribers (as of January 3, 2023) that are notified when the page updates and notifications are posted regarding the Housing Element.

During the development of the PEP stakeholders were identified and interviewed, surveys were conducted in multiple languages, and comment on the draft element was received; all informing the final iteration of the 6th Cycle Housing Element.

Stakeholder interviews were conducted to help build a framework for the 6th Cycle Housing Element. The interview questionnaire and summary are included in **Appendix A-1: Stakeholder Interview Summary**. The stakeholders that were interviewed are a subset of interested parties that were contacted from a list of community members and organizations listed in **Appendix A-2: Stakeholder List**.

Shortly after the interviews were conducted, the City conducted an on-line survey to gather information about how residents were experiencing housing. The survey was conducted in English, Spanish, Vietnamese, and Chinese (Mandarin). There were well over 1,500 responses which are summarized in **Appendix A-3: Community Survey Summary**. The survey results were incorporated into the formulation of the 6th Cycle Housing Plan Goals, Policies, and Actions. Although, there was some demographic variance in the results of the survey, they were not statistically significant. Nonetheless, where there were apparent variances or interesting results, those were provided in the summary sections as additional result tables. Finally, feedback collected provided support for the Housing Plan actions focused on diverse outreach and engagement and services to protected classes.

Appendix A-4: Regional Santa Clara County AFFH Related Outreach and **Appendix A-5: Housing Element Specific Outreach** provide numerous instances of regional and local outreach activities that the City conducted or participated in. As stated in the introduction to this 6th Cycle Housing Element, outreach consisted of:

HOUSING ELEMENT

- Community Meetings
- Stakeholders Meetings, Questionnaires, and Interviews
- Digital Surveys: English, Spanish, Vietnamese, Chinese (Simple)
- Community Events
- Community Pop-ups
- Tenant Listening Sessions
- Homelessness Taskforce Meetings
- Planning Commission and City Council Meetings

At a high level, the community engagement was utilized to balance and align community input with State Housing Law requirements. With, consistent themes of affordability, housing type and tenure, housing choice, tenant protections, and homelessness the outreach process informed the Housing Plan actions, policies, and actions, and confirmed or highlighted trends identified by the demographic analysis. Specifically outreach informed the creation of new efforts in the Housing Element as follows:

- Respondents to outreach and commentators were concerned that the designated levels of affordability in the city's existing inclusionary ordinance are increasingly not affordable for many residents. The Housing Element includes a planned effort to update the inclusionary ordinance to increase a greater number of units in the deeper affordability categories and to redefine the City's moderate affordability category to reflect a lower income range. Also proposed is including in the City's Notice of Funding Availability specifications criteria that would prioritize City funding of Extremely Low Income and Very Low Income units.
- Consistent feedback was received through all outlets and demographics of respondents highlighting the need to better address homelessness. The City's newly created Homelessness Task Force comprised of service providers, advocates, and individuals with lived experience of being unhoused have provided recommendations that are being pursued through the creation of a Homelessness Response Plan with implementation actions that will be adopted in early 2023.
- Commentors provided feedback on the need for more displacement prevention. The Housing Plan includes the City Council's future consideration of new policies and programs that would require no net loss of income restricted units during construction or rehabilitation of existing housing; replacement of existing affordable housing units at the same or lower affordability levels; landlord and City notification and information for tenants affected by efforts that would cause relocation; require developers to provide relocation benefits beyond State requirements.

- Residents of affordable and special needs housing shared at listening sessions that they have been particularly affected by heat waves and wildfire smoke. As part of the City’s CDBG program, the City will promote a Notice of Funding Availability process for installation of HVAC improvements for sensitive populations.

The City of Santa Clara asked for the public’s comments on the Housing Element Draft via its website, list-serv, social media, printed/mailed newsletter (Inside Santa Clara), e-newsletter (City Hall News) and public meetings. The comments were collected via Konveio, a public comment platform for document review and via email. The public comments received on-line and via formal comment letter are included in **Appendix A-6: Public Review Draft Comments, Figures 1-9**. Following the public comment period on the Housing Element Update, commenters and stakeholders were invited to a stakeholder meeting to discuss the potential Housing Plan goals, policies, and actions that could address their questions and concerns.

Additionally, the City continued to engage in community outreach during the 90-day review period of the Housing Element Draft by HCD. The input collected during this period is subsumed in the housing element specific outreach mentioned above in **Appendix A-5**. Public and comment and formal letters continued to be addressed after the City received comments on the Housing Element Draft. Notably, the section on Housing Resources, was significantly revised based on formal comments regarding the City’s process for site selection.

Appendix A-1 Stakeholder Interview Summary

Six interviews were held via telephone, zoom, and/or email with internal and external community stakeholders between May and June 2022.

STAKEHOLDER INTERVIEW QUESTIONS & KEY FINDINGS

1. What are the strengths and assets that make Santa Clara a great place to live?

City of Santa Clara provides its residents with a safe, diverse, community driven environment. The public facilities and parks are a utilized asset in the community.

- Weather
- Diverse population (ethnically, economically, age)
- Safe
- Great public facilities, parks, libraries, recreation facilities
- Great location, easily accessible to other areas in the Bay Area
- Good transport
- Venues, entertainment options
- Small town, University/Community College town makes it a great location to live
- High quality schools
- Family and community oriented
- Supports its residents

2. What are the most critical challenges related to residential development in Santa Clara?

Due to the high cost of living and housing shortages, some residents are unable to afford rent or to buy homes. A shortage of affordable and low-income housing could push residents out of the city.

- Cost of housing
- County code prohibits acquiring homes and buildings
- Shortage of affordable and low-income housing
- The personal home buying process is difficult due to affordability and cash offers
- Unable to place underhoused and unhoused community in shelters or affordable housing
- Lack of land for new developments
- Lack of housing and securing of more housing
- Difficulty welcoming others, NIMBY
- Congestion in existing developed areas
- High cost of rent and living will push residents out of the area
- Wait list for housing vouchers, Section 8 lottery
- Cost of construction
- Lacks character and a downtown
- Housing department is outsourcing housing assistance as well as creating barriers

3. What are your priorities for housing development in Santa Clara?

The priorities for the City of Santa Clara should be to provide affordable housing to the locals. Establishing creative housing programs is also a priority. Tackling homelessness should also be a priority.

- Financial assistance and programs for organizations to buy buildings for services such as mental illness facilities, homeless shelters
- Increase amount and accessibility of affordable housing
- Partnerships with organizations to allow for creativity
- Affordable housing for families who work in Santa Clara and send their children to public schools
- More affordable housing
- Subsidized housing options
- Facilities for people coming off the streets

4. What is your definition of affordable housing and who does it serve?

The key responses include: prioritizing the service industry, seniors, police officers, teachers, and locals. Residents should not have to pay more than 50% of their income for housing.

- Subsidized housing, based on income listed on tax returns
- Affordable housing and care for individuals with serious mental illnesses
- Serves people who are service workers/blue collar as well as the entire community
- Allows for a community to develop in a city
- Housing that is affordable for families to live in the city where they work
- Two working adults can afford rent without sacrificing food or a savings
- For teachers, seniors, police, only one senior housing development in the area

5. Are there housing projects (or general development trends) in other cities that are examples of what you would like to see in Santa Clara?

Below are examples of cities with housing projects or development trends suggested by the stakeholders.

- 41 South 11th Street house for housing and maintaining housing for groups of people
- Orange County Health Improvement Plan is a nonprofit that works with

HOUSING ELEMENT

- the county to train employees to operate housing buildings
- Short term rental assistance (TBRA)
- Charities Housing in Cupertino
- The Veranda Senior Housing
- Apartments/Condominiums with more than two bedrooms and in large buildings

- Multigenerational housing developments, co-ops: <https://www.cotaticohousing.org/>
- San Jose, community engagement
- Permanent supportive housing facility by PATH in San Jose: Villas on the Park

6. How do you see Santa Clara changing over the next 8-10 years? What role does housing play in these changes?

Providing children, elderly, and lower income residents with affordable housing options is critical to maintaining a sense of community in the City of Santa Clara. Creative and innovative housing approaches may pose challenges with locals.

- Shortage of professionals
- Something should be done about affordable housing
- Less people will want to live in the area if there are tents on the street
- Less taxes otherwise businesses won't thrive
- Give locals a reason to stay
- Expanding housing in a creative way could make people uncomfortable
- If housing doesn't change Santa Clara will not grow in a diverse way and live up to its potential
- Digitization of application processes for affordable housing
- Reduced waiting and processing time to meet demand
- Increased value in the area due to new Google development
- Crime should be addressed for safety
- Equitable quality of school districts
- Multi-bedroom units are needed for families to stay
- Increase in city policies and funding toward creating affordable housing for those in need
- Prioritize seniors and low income

7. Are there neighborhoods in the city that lack access to opportunities for healthy food, green space, transit, quality jobs and education?

Overall, the city provides access to opportunities for the residents of the City of Santa Clara. Some neighborhoods in the city could improve on access to food and transportation.

- Stakeholder is unfamiliar with the area or does not live in the city
- City provides access to opportunities
- Bicycle lane improvements
- Suburban neighborhoods lack walkability

- Transportation is infrequent and does not include enough routes
- Some neighborhoods (such as Lafayette) lacks access to nearby grocery stores

8. Can you share any thoughts or stories about housing discrimination and/or housing segregation in Santa Clara?

Overall, there is a stigma around low-income and affordable housing, particularly with landlords.

- Generally, not too prevalent in the city
- Discrimination and stigma from landlords regarding Section 8/low-income applicants
- Difficulties finding landlords willing to work with participants
- Limited supply of housing in the city
- Outdated stereotypes and stigmas about people with housing vouchers
- Upper class residents are less interested in providing the community with affordable or low-income housing developments
- Low-income housing lumped into one building
- Lower income apartments are located near title I schools and districts
- Families in low-income, one-bedroom apartments out of necessity

9. How can the City, in partnership with stakeholder groups, help to ensure inclusive and equitable fair housing outreach that includes all segments of the community?

Partnering with stakeholder groups is important to the community, however inclusive and equitable outreach are key. Residents would like the city to provide outreach to residents in multiple languages and with clearer guidelines to ensure fair housing.

- Understand the residents' needs
- Acknowledge subgroups other than those defined by race or ethnicity that need housing
- Ensure more affordable housing is implemented
- Prioritize teachers, law enforcement, nonprofit workers who want to stay in the city
- Regular outreach meetings to share community needs with the city
- Prioritize building multi bedroom housing
- Provide information about housing in multiple languages
- Provide clear guideline for who qualifies for housing programs
- City's emailing list does not reach all groups
- Not realistic to buy a house in the city of Santa Clara

HOUSING ELEMENT

10. Are there residential blocks or neighborhoods in the city that lack access to quality education and daycare, open space and parks, libraries, shopping, grocery stores, transit service, clean air, and/or other opportunities?

Below are examples of residential blocks or neighborhoods in the city that stakeholders suggest lack access to quality education and daycare, open space and parks, libraries, shopping, grocery stores, transit service, clean air, and/or other opportunities:

- Residential blocks exist in unincorporated areas with the east and south of the city - going towards the foothills (White Rd) and south of the City (Monterrey, Bernal Rd). These areas need more transportation.
- The state is investing resources in BART and the light rail, but they are not reaching those areas. There is a need for more community health clinics, subsidies for day cares throughout the city.
- The northwest of the city will lack an elementary school once all the units are constructed
- Some neighborhoods are further away from public amenities (such as libraries)
- Clean air is a problem in areas like Lawrence, Montague, Santa Moss, and El Camino
- Lafayette and Clyde is a very industrial block with factories and chemical release
- Noise pollution from the nearby San Jose airport, Levi's stadium, and major roads
- Not everybody has AC filters

11. Are there any other specific stakeholders we should be talking with?

Below is a list of suggested stakeholders to speak with:

- Teresa O'Neill – former city council member
- First community housing (<https://www.firstcommunityhousing.org/>), 21 major projects in Santa Clara County - experts in housing regulations and they understand the basic needs.
- African American Cultural Center
- Donald, Executive Director of Pacific Clinics (Previously UpLift Family services) – he works with families, youth and can give a different perspective on other populations
- Community Solutions
- Religious centers such as churches

Appendix A-4 Regional Santa Clara County AFFH Related Outreach

In 2019 Santa Clara County and Cities formed a consortium and hired a consultant to develop a regional Assessment of Fair Housing to meet both HUD and HCD requirements. The consortium hired the Lawyer's Committee for Civil Rights to conduct broad outreach, analysis, and to draft plans. The following is a summary of the interviews and meetings that were held throughout Santa Clara County as part of this early process. These meetings provided important regional context for the AFFH analysis in the Housing Element. The table below lists the meetings by category and the dates on which the meetings were held.

Because of the breadth of these efforts and the diverse views of the individuals and organizations consulted, it is difficult to distill the information that these meetings yielded down to a few key themes. This summary attempts to, first, identify the range of topics that the meetings addressed and, second, to identify *either* consensus around those topics *or* the primary alternative views expressed.

Key topics addressed in the community engagement process included:

- Unlawful housing discrimination, including but not limited to racial discrimination, failures to provide reasonable accommodations, source of income discrimination, patterns and trends in housing discrimination, and barriers to effective enforcement.
- Demographic and housing data, including but not limited to how community members interpret data provided by the U.S. Department of Housing and Urban Development (HUD) and sources of local data.
- Zoning and land use laws, including but not limited to their impact on affordable housing development and how they interact with community opposition to affordable housing in certain areas.
- Funding and regulatory programs to create affordable housing, including but not limited to how effective they are at producing units, the income levels they reach, and the bedroom distribution of units produced.
- Supportive services programs for persons with disabilities and unhoused residents, including but not limited to how those programs are coordinated with housing programs.
- The connection between access to opportunity and patterns of segregation, including but not limited to with respect to education, employment, transportation, and environmental health.
- Tenant protections and access to legal services, including but not limited to rent stabilization, just cause eviction protections, and funding for tenant representation in eviction cases.

Housing Discrimination

Consistent with national and statewide trends, participants in the community engagement process reported that disability status is the most common alleged basis of discrimination in

HOUSING ELEMENT

complaints submitted to service providers, the California Department of Fair Employment and Housing and HUD. Among disability discrimination complaints, complaints regarding alleged denials of reasonable accommodation requests are the most common. The fact that disability status is the most frequently complained of type of discrimination does not necessarily mean that it is the most common type of discrimination occurring in the community. Because of the nature of the reasonable accommodation process, it may be more apparent to individuals with disabilities that they have been subjected to discrimination. By contrast, fair housing testing may be necessary to uncover national origin and race discrimination, in particular. Testing conducted by stakeholders confirmed that these types of discrimination remain common. Complaints of source of income discrimination also remain common despite the State's relatively recently enacted prohibition on such discrimination against household with Housing Choice Vouchers suggesting either or both inadequate awareness of the new law and/or inadequate enforcement of it.

Demographic and Housing Data

There was broad consensus that housing costs in Santa Clara County are extremely high and have rapidly become more expensive over time. These changes have not affected all communities equally and Hispanic or Latino, Black, and Vietnamese populations, which tend to have lower income levels, being particularly vulnerable to displacement. In light of income disparities among Asian American and Pacific Islander ancestry groups, participants in the community engagement process emphasized the importance of disaggregated data, which tends to show lower income levels among Vietnamese households but also relatively high rates of homeownership.

Zoning and Land Use

Concern about the extent to which zoning and land use laws play a role in fair housing issues varies significantly depending on one's location within Santa Clara County. Additionally, because zoning and land use laws often have consequences across city boundaries, the greatest concerns that community members and stakeholders articulated tended to pertain to different jurisdictions than those where participants lived, provided services, or engaged in advocacy. In particular, many involved in the community engagement process noted concerns about exclusionary zoning in the West Valley. Developer stakeholders, both of affordable and of market rate housing, also noted that long approval timelines were often as significant of a barrier to their efforts as were underlying regulations. They noted understaffing of planning departments as a principal driver of those delays.

Affordable Housing Programs

There was generally consensus around the need to provide more financial support for affordable housing across jurisdictions in Santa Clara County though there were some differences of opinion about how, if at all, to use regulatory tools like inclusionary housing to produce affordable housing. The details of input about affordable housing funding programs varied in relation to the different landscapes of existing programs in each municipality. Some stakeholders noted the high bar to passage for bond issues, including affordable housing bond issues, reflecting that, while the passage of Measure A was a big step forward for Santa Clara County, a similar bond issue in the City of San José had failed despite a large majority of support. Inclusionary housing was a frequent topic of discussion but not a point on which there was consensus. Most participants who discussed inclusionary housing voiced support for the adoption of requirements in more jurisdictions, deeper affordability targeting, and higher set aside requirements. Some participants opposed these types of changes on the basis of stated concerns about deterring new development.

Supportive Services

Participants in the community engagement process noted geographic unevenness in the availability of supportive services for persons with disabilities and unhoused populations, with communities in South County having less access than in North County. There was also criticism of the overall level of services that are available and concern that there were more adequate services available for chronically unhoused individuals with serious mental illness and/or substance abuse disorders but that other vulnerable populations, including disproportionately Hispanic or Latino unhoused families, domestic violence survivors, and medically fragile individuals, have less access to services. For formerly unhoused individuals living in permanent supportive housing, some expressed concern about whether persons with disabilities have true provider choice.

Access to Opportunity

Many stakeholders and residents expressed concern about public transportation in Santa Clara County. Issues raised include the overall level of service, the lack of service in some areas with high performing school in the West Valley, the lack of service in South County, and high fares on CalTrain. Bus riders mentioned long headways on some bus routes as a problem. Participants reflected on the expansion of BART service into Santa Clara County as both an opportunity and an occurrence that could lead to more displacement. With regard to environmental health, the most significant concerns articulated in the community engagement process related to issues in East and North San José. The connection between patterns of segregation and access to proficient

HOUSING ELEMENT

schools was clear in the data analysis conducted for the Assessment of Fair Housing but was not heavily emphasized by participants in the community engagement process.

Tenant Protections

Tenant protections were a frequent topic of discussion albeit one that sharply divided opinion among participants in the community engagement process. Many participants urged robust tenant protections including rent stabilization with as few exemptions as are allowed by state law, just cause eviction protections, constraints on Ellis Act conversions, and requirements that landlords pay relocation expenses for displaced tenants. Other participants, particularly trade associations representing landlords, strongly opposed most or all of these policies. Small “mom and pop” landlords were particularly likely to express opposition to just cause eviction protections and stated more strenuous objections to that policy than they did to rent stabilization. Legal services providers noted that they did not have the resources or capacity to meet the total need for tenant representation in eviction cases absent additional funding. It is important to note that this input was gathered prior to the COVID-19 pandemic, and there was no opportunity to get input on the various government interventions to prevent evictions during the pandemic.

Summaries from Select Meetings/Activities

1. March 12, 2021. Stakeholders meeting (Zoom). Approximately 30 individuals representing numerous development companies and related interests participated in a discussion regarding potential amendments to City's Affordable Housing Ordinance. Economic & Planning Systems, Inc. (EPS), the City's consultant, presented at the beginning of the meeting and shared the housing prototypes being analyzed for feasibility with the current Affordable Housing Ordinance and potential changes that would increase the number or depth of affordability the City could consider. A [summary of stakeholder comments](#) is available on the [Housing Element Update page](#).

3. August 30, 2021. Let's Talk Housing Community Meeting (Zoom). A series of countywide meetings about the Housing Element update were held from August to September 2021. Each meeting offered Spanish-language interpretation and provided community members with an introduction the Housing Element update, why it matters, information on the Let's Talk Housing outreach effort and countywide trends. Breakout room discussions with individual cities and towns followed. In total 832 registered for the series. Of those who registered for the series, the majority identified as White and over half were 50 years or older. Over sixty percent lived over 21 years within the county, and over half were homeowners. Santa Clara was part of the August 30th, 2021 introductory meeting, along with Milpitas, Mountain View, and Sunnyvale. This meeting offered Vietnamese interpretation in addition to Spanish, courtesy of the City of Milpitas, and outreach for the meeting was conducted in the three languages. Twenty-five people who registered for the August 30th meeting identified as joining from Santa Clara. Of the Santa Clara participants, all indicated being homeowners and living in single family homes. In the breakout session, participants expressed that they valued living in Santa Clara due to its tight knit community, its rich history, ample job opportunities, and its mix of older and newer neighborhoods. However, participants pointed out older housing is becoming increasingly unaffordable and the general lack of moderate and affordable housing. Older adults, especially those who are moderate or low income, struggle to find housing and many adult children can't live close to their aging parents. Among ideas to address these

needs were: transit-oriented development, increasing allowable densities, and developing an affordable housing program for seniors. Among programs or policies that are already working well, participants shared that specific plans have been an effective tool for development and the El Camino Real Specific Plan in particular is a good example of extensive and comprehensive community outreach.

8. May 5, 2022. Stakeholder Listening Session: Development Constraints (Zoom). The presentation and summary from this meeting is available on the [Santa Clara County Planning Collaborative page](#) and on the [Housing Element Update page](#).

14. June 18-22, 2022. Inside Santa Clara (summer 2022 edition). Full page article on the Housing Element Update. Printed newsletter sent to over 58,000 residents and businesses.

19. August 1, 2022. Community Meeting (Zoom). Community meeting with a presentation on the Housing Plan of the draft Housing Element Update; comments were made regarding tenant protections, housing for persons with disabilities, and increased housing type and tenure. There twelve (12) members of the community that attended representing individuals and advocacy organizations.

22. August 23, 2022. Regional Equity Advisory Group (EAG) Meeting (Zoom). Provided City with general feedback on how to improve engagement with stakeholders and community members. Suggested more direct outreach and importance of going to specific locations to reach targeted populations. Specific comments about locating housing in high/highest opportunity areas of the City and that ELI households experience the highest rates of housing cost burden, making them at the highest risk of homelessness or displacement.

24. September 17-18, 2022. 40th Annual Art & Wine Festival (In-person). 152 attendees participated in a dot exercise to identify what they felt were the biggest challenges/greatest needs facing the City of Santa Clara. Participants were provided different colored dots if they identified as a City of Santa Clara homeowner (111), City of Santa Clara renter (24), if they work (but don't live) in the City of Santa Clara (4), or if they don't live or work in the City of Santa Clara (13). From a list of 13 biggest challenges/greatest needs, the most votes were placed on 1. Addressing homelessness: programs, temporary housing/permanent supportive housing; 2. Housing that is affordable to low/minimum wage earners (e.g., service/retail workers); 3. Providing more homeownership opportunities; and 4. Stabilizing rents (limit large rent increases and large deposit requirements).

Although Santa Clara homeowners and renters identified the same top four biggest challenges/greatest needs, the order was different. For homeowners addressing homelessness received the most votes and stabilizing rents received the fourth most votes. For renters stabilizing rents received the most votes and addressing homelessness received the fourth most votes.

Homeowners: 1. Addressing homelessness; 2. Housing that is affordable to low/minimum wage earners; 3. Providing more homeownership opportunities; 4. Stabilizing rents

HOUSING ELEMENT

Renters: 1. Stabilizing rents; 2. Housing that is affordable to low/minimum wage earners; 3. Providing more homeownership opportunities; 4. Addressing homelessness.

24, 25, 26. September 19, 2022. Riverwood Grove (family housing) Residents Meeting (In-person with 16 adults, 5 children); September 20, 2022. Bill Wilson Peacock Commons (transition age youth) Residents Meeting (In-person with 10 adults, 5 children); September 22, 2022. Liberty Tower (senior housing) Residents Meeting (In-person with 8 adults, 2 staff). Residents of the three housing developments were asked a series of questions, including about their personal experiences/challenges finding and living in affordable/supportive housing, and what they would like to see in terms of priorities for making their housing experience better. In addition to noting specific resources needs and concerns about traffic and safety, residents consistently noted the challenges of barriers to entry (affordability and wait/availability of units).

27. November 17, 2022. Stakeholders Workshop (Zoom). Zoom meeting that reviewed the Housing Element development process using a Mural Board. The meeting was primarily attended by housing and human service providers and advocacy organizations. Attendees mentioned the need for more emergency rental assistance, that state relocation assistance is inadequate, that ELI seniors in income restricted housing are increasingly rent burdened and at risk of homelessness, that seniors need in-person housing navigation assistance that homelessness prevention is less costly than crisis response, that city and county government should work on providing holistic housing services, the need for more social workers and case managers to help clients navigate programs, the need to financially support service providers so they can retain staff, the need to bring air conditioning and filters into affordable housing in response to heat and wildfire smoke climate change, and the need to proactively reach out to Latino/a, Vietnamese, and Filipino/a populations who are disproportionately in need of affordable housing.

Appendix A-6 Public Review Draft Comments

The City of Santa Clara asked for the public's comments on the Housing Element Update. The document to post public comments can be found here: <https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=87#page=18>. Below is a summary of the received comments.

FIGURE 1: HOUSING ELEMENT DRAFT PUBLIC COMMENTS

Date	Name	Comment	Comment Page	Sentiment	Comment link	Response
7/1/2022	Katherine Lanning	I love Santa Clara and would love to volunteer my time helping others in this beautiful city. The Housing Element isn't the place where the city talks about "exploring changes." The Housing Element is where the city talks about the result of the explorations that have already happened, and explains what the changes are and when exactly they will be accomplished.	18	Positive	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=87#page=18	
7/30/2022	Anne Paulson	What changes will you make, and when will they be made? These exceedingly weak explorations do nothing to achieve B-1 (look for sites for affordable housing), B-2 (encourage high density housing), or B-3 (look for funding for affordable housing). They don't do anything for the C goals either, which are about housing for people with special circumstances (disability, female-headed, large family).	22	Neutral	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=98#page=22	
7/30/2022	Anne Paulson	My suggestion is that you write objectives that would actually achieve your goals, and give time deadlines for them.	22	Negative	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=99#page=22	

HOUSING ELEMENT

7/12/2022	Jennifer	Where is Action #4? I see responsible agency and objectives, but no Action listed or Funding Source.	24	Negative	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=90#page=24
7/30/2022	Anne Paulson	How will you improve the maintenance of student housing, and when?	26	Neutral	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=100#page=26
7/30/2022	Anne Paulson	When?	26	Neutral	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=101#page=26
7/30/2022	Anne Paulson	When? Yes, I would really like to see more upzoning/high density development while being conscious of existing transportation, or improving/adding more transportation to support new developments such that they reduce reliance on cars.	26	Neutral	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=102#page=26
7/29/2022	Nick Leung	cars.	27	Neutral	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=91#page=27
7/30/2022	Anne Paulson	How?	28	Neutral	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=103#page=28
7/30/2022	Anne Paulson	How?	28	Neutral	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=104#page=28

7/30/2022	Anne Paulson	What is the action here? I don't see any action.	33	Negative	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=105#page=33
7/29/2022	Nick Leung	If El Camino becomes densified, I'd like to see dedicated BRT. We should lower the requirements for parking. Parking is poor land use (especially surface parking) which encourages more cars, which is bad for traffic and many reasons. In this area, so much land is already dedicated to cars (4+4 lane expressways, highways, garages, driveways, parking, etc.). We can increase the transportation connectivity and serve lower income residents better by lessening the emphasis on car-driven development.	77	Neutral	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=92#page=77
7/29/2022	Nick Leung	How can you say with a straight face that development standards aren't a constraint on building, when you require two parking spaces for a studio apartment? You're requiring more space for the cars than for the people.	117	Neutral	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=93#page=117
7/30/2022	Anne Paulson	An SRO is not employee housing; it's rooms with or without kitchens that are rented separately. Why is the title SRO Housing, when the text doesn't talk about SRO housing?	118	Negative	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=96#page=118
7/30/2022	Anne Paulson	The Housing Element	120	Negative	https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=97#page=120

HOUSING ELEMENT

needs to explain how Santa Clara allows Single Room Occupancy housing.

I think this is unfortunate, but it's obvious that this community opposition to densification has created disastrous effects for housing affordability for everyone.

We can fight a lot of this community resistance with transit oriented and mixed use development, though I expect the community will find other ways to oppose it.

7/29/2022 Nick Leung

We should still try. (Page 13.5-23) The Housing Element says that it will do a fee analysis of the four prototypical buildings. And then, it just doesn't. I'd like to know how much the 100 unit building would pay in fees, and I assumed that's what the analysis was going to give me, but it doesn't. Elsewhere in the document (p 13.5-13) it says that a large multifamily project pays \$2156 per unit, but that doesn't look accurate, with all those big permit fees.

132

Negative

<https://santaclaraca.konveio.com/city-santa-clara-housing-element-update?cid=94#page=132>

The document needs to tell us what the fees are for these typical buildings.

HOUSING ELEMENT

Thanks for taking the time to visit the LSA Cypress home. Cypress is a licensed residential care home.

As I mentioned I had a chance to review chapter 13.2 Housing Plan and have some comments I'd like to share.

My general comment is that otherwise eligible individuals should not be excluded because they choose to or are already living in a licensed residential care home. These individuals need the support just as much as there counterpart.

Here are some additional comments to specific section in the Housing Plan.

Action 1: The 4th objective – Support low-income housing alternatives such as housing for persons with disabilities should be expanded specifically to include licensed residential care homes.

Action 3: Affordable Housing Incentives and Facilitation. The construction of affordable housing should also include residential care homes as a type of facility and funding to at least the same level per person as multiunit projects.

Action 4: Maintenance of Housing Stock should include residential care homes in the definition of who is qualified to receive maintenance.

8/16/2022	Dana Hooper	n/a	n/a

HOUSING ELEMENT

8/8/2022 [SV@Home](#)

Matthew Reed,
Policy Director

- The City of Santa Clara's Draft 6th Cycle Housing Element falls short of the statutory requirement at multiple levels, from its failure to elicit and reflect community input, to its deficient analysis of needs, to its absence of concrete programs with implementation details and timelines
- The sites inventory falls significantly short of the AFFH requirements for this process
- 6th Cycle Housing Element Update is a unique process to fully assess the breadth of housing needs in Santa Clara and identify new tools to address housing constraints and needs
- Opportunity to engage with the full community across incomes
- SV@Home does not find that the Draft Housing Element Update shows evidence of the significant public engagement and community participation required to be compliant with guidance provided by the state
- Lack of sufficient outreach and notification to public/community
- The Housing Element does not a) provide a summary of public comments and b) explain how the comments were considered and incorporated, including comments that were not incorporated.
- The Housing Needs Assessment does not incorporate local knowledge or analysis.
- SV@Home recommends that the City of Santa Clara conduct additional outreach and analysis of the housing needs data in the draft with the goal of better understanding the housing needs of the city as they are experienced by residents of the city
- SV@Home recommends that the assessment of the 5th Cycle Policies and Programs be incorporated into the more comprehensive assessment of housing needs, including concrete opportunities for public engagement around the lessons learned from these prior efforts.
- Lack of connection between needs and solutions in the draft
- SV@Home believes the lack of detail in the policies and programs included in the draft will not prove to be compliant.
- SV@Home believes there is a general failure to substantively address housing instability and displacement experienced by protected classes under AFFH in Santa Clara.
- SV@Home recommends that the City of Santa Clara confirm and remove any sites from the inventory that received building permits prior to June 30, 2022, whether listed as "Under Construction" or "Approved".

8/16/2022 Life Services
Alternatives

Dana Hooper,
Executive Director

General Comment: Otherwise eligible individuals should not be excluded because they choose to or are already living in a licensed residential care home. These individuals need the support just as much as their counterpart.

Action 1: The 4th objective – Support low-income housing alternatives such as housing for persons with disabilities should be expanded specifically to include licensed residential care homes.

Action 3: Affordable Housing Incentives and Facilitation. The construction of affordable housing should also include residential care homes as a type of facility and funding to at least the same level per person as multiunit projects.

Action 4: Maintenance of Housing Stock should include residential care homes in the definition of who is qualified to receive maintenance.

8/1/2022

Anne Paulson

-The Local Processing Explanation Is Confusing and Lacks Necessary Information

-Recommendations:

- For each typical type of building (ADU, single family house, 10 unit multifamily, 100 unit multifamily, big project that requires rezoning), list each step the applicant must go through, in order, with the time it takes, the number of public meetings it requires, the approval body or bodies, and how much it costs

- Make the fees table comprehensible

'-Lack of clarity in the Local Processing Explanation Is Confusing and Lacks Necessary Information

-Recommendations:

- Be more specific about the stage of approval each project is in.
- Discount pipeline project and site inventory capacity for the probability that the project doesn't get built'

-What the Housing Element needs to do is

explain how this capacity is going to be used to build the RHNA in the next eight years. The document needs to be far more clear and explicit about the entire process—the steps, how long the process takes, how much the fees are, what the project mortality is—and where each listed project is along the way

- Santa Clara is nowhere close to building below market units at a rate that would satisfy its Sixth Cycle below market RHNA. So it would make sense for the Housing Element to include programs, with deadlines and milestones, to build more affordable housing.

- The City Needs to Commit to Actual Measurable Actions and Deadlines

-To further encourage all-affordable projects, the city should also

- make all-affordable housing projects buildable by right, with ministerial approval
- remove parking minimums for all-affordable projects
- reduce fees for all-affordable projects

If the city cannot take these actions now for whatever reason, it should identify the reason and commit to taking the action by a certain date within the planning period.

FIGURE 2: FORMAL COMMENT LETTER: TRANSFORM

July 27, 2022

John Davidson, Principal Planner
1500 Waterburton Avenue
Santa Clara, CA 95050

Re: Santa Clara needs transformative parking measures to eliminate development constraints

Dear Mr. Davidson and City Councilmembers,

TransForm is a regional non-profit focused on creating connected and healthy communities that can meet climate goals, reduce traffic, and include housing affordable for everyone.

We applaud Santa Clara's work to date on the Draft Housing Element. However, to meet housing, transportation, and climate goals, Santa Clara needs to expand on its successful programs and initiate some new ones.

In particular, there will need to be an effective mix of:

- Planning for growth in walkable areas near transit
- Reducing the amount of parking mandated for housing and providing incentives and programs to drive less (Transportation Demand Management or TDM)
- Developing sufficient programs to meet affordable home targets of RHNA

We appreciate the consideration of parking as a massive constraint on development in Santa Clara in the Housing Element, especially related to meeting RHNA requirements. Santa Clara currently requires 1 or more spaces per unit in almost all zoning districts, and without any commitment to further reducing required parking, we see a disconnect between understanding parking as a constraint and taking additional action.

We are grateful for Santa Clara's inclusion of Action 9 which aims to revise zoning standards and potentially reduce/eliminate parking minimums. However we worry this action lacks a commitment to specific changes, such as what parking strategies the city may pursue. The need to eliminate or greatly reduce parking minimums is more important than ever. **Each new parking space costs \$30,000-\$80,000.**¹ With inflation driving up construction costs since these

¹
<https://www.showpdogg.com/wp-content/uploads/sites/10/2016/05/Cutting-the-Cost-of-Parking-Requirements.pdf>

estimates, two spaces may now cost up to \$200,000. Beyond construction costs, parking takes up essential space that could provide more homes, services, or community amenities.

TransForm recommends that Santa Clara consider the following policies in the Housing Element:

1. Funding a dedicated study of parking reforms, particularly how smart parking policies could positively impact housing, transportation, and other goals.
2. Requiring unbundled parking for certain developments in "Transit Neighborhoods" across various zones; this is easier for building managers to implement now with new parking tech tools like [Parkade](#).
3. Expanding the Transportation Demand Management program by requiring provision of transit pass memberships for each resident.

To show the tremendous transportation and climate benefits of these policies, as well as some of the financial savings for residents and reduced costs for development, we have used our GreenTRIP Connect tool to [create scenarios](#) for a potential future development site at 2203-2215 Tasman Drive. This site is identified in Santa Clara's draft Housing Element Site Inventory as a "Transit Neighborhood" and part of the Tasman East Specific Plan. The California Office of Planning and Research recommends GreenTRIP Connect as a tool to use while developing General Plans and is especially useful during the development of Housing Elements (the tool is free to use and supports better planning at the site and city-wide level).

At 2203 - 2215 Tasman Drive, GreenTRIP Connect projects the following benefits from implementing smart parking, transportation, and affordability strategies:

1. Implementing unbundling and providing transit passes at this site led to a 29% decrease in parking and resident transportation savings of \$4,464 per year.
2. With right-sized parking, incorporating the benefits of good location, unbundled parking and free transit passes, the development would cost \$2,509,500 less to build relative to current parking standards.
3. When combined with 100% affordable housing, these strategies resulted in an incredible 52% reduction in driving and greenhouse gas emissions for the site, compared to the city average.
4. If an affordable development with smart parking strategies were built on this site each household would drive 5,373 less miles per year, creating a greener and safer community.

By eliminating the high costs of parking, homes can be offered at more affordable prices, reducing the number of community members that face extreme housing cost burdens, getting priced out of their community, and/or becoming unsheltered. Residents, new and old alike, will greatly benefit from the reduction in vehicle traffic and associated air pollution (see the scenarios [here](#)).

SANTA CLARA

HOUSING ELEMENT

In addition to parking and transportation strategies, we applaud some of the proposed strategies to support more affordable homes, since these would have such tremendous benefits as noted in the GreenTRIP scenario. One of the most important is Policy C-1 which prioritizes collaborating with services agencies and housing developers to use grants towards more special needs and affordable housing. These programs are a cost-effective complement to strategies focused on housing production.

The GreenTRIP scenarios and the chart on the final page of our Scenario document also show the imperative of programs to accelerate development of affordable homes, like Policy C-1. Not only do these households use transit more and drive much less than average, but success in this area can help provide homes for unsheltered individuals and families. A commitment to these programs will show that Santa Clara is committed to planning for all levels of the 6,506 RHNA BMR units anticipated in this cycle.

Please let me know if you have any questions. TransForm hopes this information explains why Santa Clara should make parking reform a priority in the Housing Element update.

Sincerely,
Kendra Ma

FIGURE 3: FORMAL COMMENT LETTER: SILICON VALLEY AT HOME

HOUSING ELEMENT

July 1, 2022

RE: **Housing Element – Anti-displacement policies to Affirmatively Further Fair Housing**

Page 2 of 4

Based on the work in Palo Alto, and a number of other cities, below are a number of policies that the City of Santa Clara should consider, or build upon, to further the community's anti-displacement goals by addressing housing instability.

1) **Rental Survey Program**

Rental survey systems collect basic information on rental housing – changes to tenancies, changes to rents - to empower cities to better understand the challenges faced by renters, and the effectiveness of state and local renter protections.

2) **Tenant Relocation Assistance**

When tenants are displaced due to redevelopment of an existing rental property, or the conversion of that property to another use, this policy would require the property owner to provide assistance to the tenant to help them relocate to another home.

3) **Eviction Reduction Program**

This expands on existing state law (AB 1482: The Tenant Protection Act of 2019), which limits the reasons a landlord can evict a tenant, to additional types of rental properties otherwise not covered by the state. Local jurisdictions can determine which loopholes they would like to close. Currently, state law exempts:

- a) Single family homes not owned by a corporation
- b) Rental property built within the past 15 years, including accessory dwelling units.
- c) Any duplex where the owner occupied the unit before the other unit's tenancy and continues to occupy the unit.
- d) Housing restricted by a deed, regulatory restrictions, or other recorded document limiting the affordability to low or moderate income households.
- e) Mobile homes.
- f) Rental property subject to local ordinances that restrict rent increases to less than 5% plus CPI.
- g) Single family homes where the owner occupies and rents at least 2 bedrooms or units (ADUs and JADUs).
- h) Owner occupied rental properties where the tenant shares bathroom or kitchen facilities with the owner.
- i) Hotels
- j) Rental property provided by non-profit hospitals, organizations such as churches, extended care for the elderly, adult care facilities etc.

4) **Anti Rent-Gouging Policy**

This policy also expands on existing state law (AB 1482: The Tenant Protection Act of 2019), which limits annual rent increases to 5% plus the Consumer Price Index (CPI), by including additional units exempted by state law. Each city can determine which loopholes they would like to close. They can also adopt lower thresholds for maximum increases like San Jose (5%) and Mountain View (CPI). Currently, state law exempts:

- a) Single Family homes not owned by a corporation
- b) Rental property built within the past 15 years, including accessory dwelling units.
- c) Any duplex where the owner occupied the unit before the other unit's tenancy and continues to occupy the unit.
- d) Housing restricted by a deed, regulatory restrictions, or other recorded document limiting the affordability to low or moderate income households.
- e) Mobile homes.
- f) Hotels

July 1, 2022

RE: **Housing Element – Anti-displacement policies to Affirmatively Further Fair Housing**

Page 3 of 4

- 5) **Security Deposit Limit**
This policy would limit the amount that can be charged for security deposits to 1.5 times the monthly rent, and help reduce the financial obstacles to entry for low-income households.
- 6) **Fair Chance Ordinance**
This ordinance would limit landlords' ability to ask applicants about their history of interaction with the criminal justice system, which disproportionately impacts Black and brown households. The policy would not make it illegal for landlords to run background checks on tenants, but would make it illegal to include these questions on the initial rental application.
- 7) **Right to Counsel**
This program would provide tenants with legal assistance in eviction cases. Tenants experiencing housing instability will be better able to enjoy the rights they have, feel more empowered to exercise those rights, and be more likely to stay housed more often.
- 8) **Tenant/Community Opportunity to Purchase (TOPA/COPA)**
The local jurisdiction could provide tenants and/or community-based organizations notice of intended sale of rented property, and provide a specific time period during which the tenants and/or organization have the opportunity to purchase the property. Tenants at risk of being displaced through the sale of a building would be provided with another option to potentially stay in their home. A version of this policy is actively being explored and studied in the City of San Jose.
- 9) **Proactive Rental Inspection**
This establishes a program for code enforcement officers to routinely inspect the rental housing inventory. Through these programs tenants are more likely to be protected from living in substandard housing, and local jurisdictions may catch habitability issues before they become so large that they require "red tag" evictions.
- 10) **Tenant Resource Center**
As a response to the pandemic, the cities of San Jose and Mountain View created Eviction Help Centers where tenants and landlords could receive information on local laws, assistance to apply for rent relief and legal aid. These cities are now looking at making the centers a permanent tenant/housing resource center post-pandemic.
- 11) **City-wide Affordable Rent Portals**
A portal for submitting a common application for affordable housing would save the tremendous amount of time and energy it currently takes to submit the same information on separate applications for each affordable property. A clearinghouse of affordable housing opportunities would also allow the city or county to affirmatively market to vulnerable and hard to reach populations. Current examples of these portals include [San Jose Doorways](#) and [Dalia in San Francisco](#).
- 12) **Increase Multi-lingual engagement with city services and housing opportunities**
Language barriers can keep many communities from accessing the housing opportunities and services they need. Taking steps to increase the city's capacity to engage under multiple languages can improve those outcomes.
- 13) **Net-loss policy**
SB 330 (The Housing Crisis Act of 2019) requires that protected units are replaced one-for-one in cases of the redevelopment of a rental property. These provisions are currently mandated by state law, but local jurisdictions

SANTA CLARA

HOUSING ELEMENT

July 1, 2022

RE: **Housing Element – Anti-displacement policies to Affirmatively Further Fair Housing**

Page 4 of 4

can adopt permanent no-net-loss ordinances. This policy would protect critical sources of housing affordable to lower-income families, and incentivize higher-density infill redevelopment when paired with land use policies to support the feasibility of this redevelopment.

These policies have been developed with consideration of some of the major barriers to housing stability, and causes of displacement, which have been identified through an extensive research and engagement process in Palo Alto, and a few other jurisdictions in the county. Through the housing element, these anti-displacement policies should be considered a comprehensive package of responses to address the complexity of the challenges faced by renters in Santa Clara. For further information and if you have any questions, please feel free to reach out to our Preservation and Protection Associate, Emily Ann Ramos at emily@siliconvalleyathome.org.

Thank you for considering anti-displacement and tenant protections solutions to affirmatively further fair housing.

Sincerely,

A handwritten signature in black ink, appearing to read "Mathew Reed".

FIGURE 4: FORMAL COMMENT LETTER: HOUSING CHOICES

DEVELOPMENTAL DISABILITIES COMMENTS FOR

CITY OF SANTA CLARA HOUSING ELEMENT

Introduction to Developmental Disabilities

California state law defines developmental disabilities as a disabling condition that emerged before age 18, is expected to be lifelong, and is a substantial disability attributable to major impairment of cognitive and/or social functioning. A substantial disability is defined as “significant functional limitations...in three or more of the following areas of major life activity, as appropriate to the person’s age: Receptive and expressive language; Learning; Self-care; Mobility; Self-direction; Capacity for independent living; and/or Economic self-sufficiency”. Developmental disabilities include intellectual disability, autism, Down syndrome, epilepsy, cerebral palsy, and other disabling conditions similar in their functional impact to an intellectual disability. A developmental disability by definition does not include conditions that are solely physical, psychiatric or learning disabilities (Section 4512 of the Welfare and Institutions Code and Section 54000-54002 of the Code of Regulations). Under California’s Lanterman Developmental Disabilities Services Act and the U.S. Supreme Court’s 1999 decision in *Olmstead v. L.C.*, people with developmental disabilities are entitled to receive community-based services that allow them to live in the least restrictive community setting of their choosing. In California these services are accessed through the state’s 21 Regional Centers and funded by the Department of Developmental Disabilities. This shift to de-institutionalization has led to the closure of the most restrictive segregated settings and to the requirement, under SB 812, that local jurisdictions in their Housing Elements assess and plan specifically for the housing needs of people with developmental disabilities who receive supportive services from the Regional Center in order to live in their home community.

Demographic and Other Trends Affecting the Housing Needs of People with Developmental Disabilities

Higher Proportion of Adults with Developmental Disabilities in the City of Santa Clara. The City of Santa Clara is home to 612 people with developmental disabilities (Table ____). Because the previous Housing Element 2014-2023 reported the population by zip codes there is overlap with surrounding jurisdictions which makes it difficult to estimate the change in population in the City of Santa Clara alone, however throughout Santa Clara County there has been a 14% increase in the population with

HOUSING ELEMENT

developmental disabilities between 2015-2021, much faster than the general population. The table below shows that the City of Santa Clara requires more housing options for adults with developmental disabilities than other parts of the County because a greater proportion of City of Santa Clara's residents with developmental disabilities are adults (67%) as compared to the County's total population (63%).

Table ____ City of Santa Clara and Santa Clara County Population with Developmental Disabilities

Age	City of Santa Clara	City of Santa Clara % of total	Santa Clara County	Santa Clara County % of total
Under age 18	204	33%	4016	37%
18 and older	408	67%	6737	63%
Total	612	100%	10753	100%

Note: The City of Santa Clara population with developmental disabilities was provided by San Andreas Regional Center as of November 2021. The Santa Clara County population with developmental disabilities is based on county-level data published by the Department of Developmental Services as of June 2021.

Living Arrangements of City of Santa Clara Adults with Developmental Disabilities. Assessing the housing needs of adults with developmental disabilities is of particular importance because as they age the adults will require a residential option outside the family home, whereas the family home is the preferred living option for children with developmental disabilities. As of June 2021, San Andreas Regional Center (SARC) reported that the family home is the most prevalent living arrangement for the City of Santa Clara's adults with developmental disabilities, with 66% of adults continuing to live in the family home. Only 16% of City of Santa Clara adults with developmental disabilities have successfully transitioned to living in their own apartment, more than half of whom live at inclusive properties Estancia Apartments and Rivertown Apartments where a total of 38 units are set-aside for people with developmental disabilities who receive on-site supportive services to help them remain stably housed. As of 2021, 17% of City of Santa Clara adults were reported to be living in licensed care facilities, however, as discussed below, opportunities for adults to live in a licensed care facility are declining throughout the County. This decline is fueling the need for the City of Santa Clara to increase opportunities for adults with developmental disabilities to live in affordable housing with supportive services in order to decrease risk of homelessness or displacement when a parent or family member is no longer able to provide housing.

Decline in Licensed Care Facilities in Santa Clara County. The Department of Developmental Services reports that between September 2015 and June 2021, 5% fewer people with developmental disabilities were able to be housed in licensed care facilities (including Community Care Facilities, Intermediate Care Facilities, and Skilled Nursing Facilities) in Santa Clara County, even as the adult population in need of residential options outside the family home grew. This trend increases the need for affordable housing options coordinated with supportive services funded by the San Andreas Regional Center. The County's reduced supply of licensed care facilities increases the likelihood that City of Santa Clara adults with

developmental disabilities will be forced out of the county when their parents are no longer able to house them--unless there is a significant improvement in access to affordable housing.

Table ____ Living Arrangements of Adults with Developmental Disabilities in City of Santa Clara compared to Santa Clara County

Adult Living Arrangements	City of Santa Clara	City of Santa Clara Percent of Total	Santa Clara County	County Percent of Total
In the family home	269	66%	4,362	65%
Own apartment with supportive services	66	16%	756	11%
Licensed Facilities	69	17%	1,525	23%
Other (including homeless)	4	1%	94	1%
Total Adults	408	100%	6,737	100%

Note: The City of Santa Clara population with developmental disabilities was provided by San Andreas Regional Center as of November 2021. The Santa Clara County population with developmental disabilities is based on county-level data published by the Department of Developmental Services as of June 2021.

Longer Life Spans. Between September 2015 and June 2021, the Department of Developmental Services reports that the number of Santa Clara County residents with developmental disabilities age 62 and older grew by 35% (Table ____). This increase is generally attributable to well-documented gains in life span, rather than to migration of seniors with developmental disabilities into Santa Clara County. Longer life spans mean that more adults with developmental disabilities will outlive their parents and family members who are by far the single largest source of housing for people with developmental disabilities in the City of Santa Clara. Because older adults currently occupying a licensed facility in Santa Clara County are living longer, this reduced rate of occupant turnover, coupled with closing facilities, will make it more difficult for middle-aged and senior adults who have been living with aging parents in the City of Santa Clara to transition to licensed care when their parents pass away.

Displacement. Notwithstanding 20% growth in Santa Clara County's total population of adults with developmental disabilities, the Department of Developmental Services has documented a 15% decline in the age group 42 to 51 in Santa Clara County between September 2015 and June 2021 (Table ____). In light of gains in life expectancy, this loss can reasonably be attributed to displacement from the county because of the lack of residential living options (either licensed facilities or affordable housing) when an elderly family caregiver passes away or becomes unable to house and care for the adult. Displacement takes a particular toll on adults with developmental disabilities who depend on familiarity with transit routes and shopping and services, as well as support from community-based services and informal networks built up over years of living in Santa Clara.

Increase of Autism Diagnosis Reflected in Increase in Adults in their 20s and 30s. Growth in the Santa Clara County adult population with developmental disabilities correlates with a well-documented annual

HOUSING ELEMENT

increase in the diagnosis of autism that began in the mid-1980s and did not level out until after 2015. The cumulative impact of this trend is already seen in the growth of the Santa Clara County population age 18 to 41 with developmental disabilities and will continue into the future. This trend has significant implications for housing needs among City of Santa Clara adults with developmental disabilities during the period of the 2023-2031 Housing Element, as the population can be expected to continue to grow at a faster rate than the general population.

Table __ Changes in Age Distribution of Adult Population in Santa Clara County

Age	2015 Number	2021 Number	% Change
18 to 31	2,767	3,515	27%
32 to 41	891	1,212	36%
42 to 51	833	705	-15%
52 to 61	702	744	6%
62 plus	416	561	35%
Total adults	5,609	6,737	20%

Source: Department of Developmental Services Quarterly Report by County.

Higher Rates of Physical Disabilities. People with developmental disabilities are more likely than the general population to have an accompanying physical disability. Almost 20% of Santa Clara County residents with developmental disabilities have limited mobility, and 15% have a vision or hearing impairment. The need for an accessible unit coupled with the need for coordinated supportive services compounds the housing barriers faced by those with both cognitive and physical disabilities.

Ineligibility for Many Affordable Rental Units. Some adults with developmental disabilities depend on monthly income of around \$1,000 from the Supplemental Security Income (SSI) program, pricing them out of many of the limited number of affordable housing units in the City of Santa Clara. Those with employment tend to work part-time in the lowest paid jobs and also struggle to income-qualify for many of the affordable housing units now available for rent in the City of Santa Clara.

Transit-Dependent. Most adults with developmental disabilities do not drive or own a car and many rely on public transit as a means to integration in the larger community.

Best Practices for Inclusion of People with Developmental Disabilities in Typical Affordable Housing

The City of Santa Clara can meet the housing needs of people with developmental disabilities by adopting policies and programs to continue promoting their inclusion with coordinated services in typical affordable housing. The following considerations should guide the City of Santa Clara in this pursuit:

- **Integration in typical affordable housing** is a priority in order to affirmatively further fair housing for a group that has historically experienced no alternatives to segregated living and also to counter the displacement of adults with developmental disabilities out of the City of Santa Clara.
- **Coordination of housing with onsite supportive services** funded by the San Andreas Regional Center should be encouraged. These fully funded coordinated services provide a supported pathway for people with developmental disabilities to apply for and retain an affordable apartment and are often as essential to a person with a developmental disability as a physically modified unit is to a person with a mobility, vision, or hearing impairment.
- **A mix of unit sizes** at inclusive housing properties would address the needs of those who require live-in aides, want to live with roommates or partners, or have children.
- **Location near public transit** would accommodate the transit-dependency of most adults with developmental disabilities.
- **Deeply affordable housing is needed by people with developmental disabilities.** Per HCD guidance, the City should plan for at least 1,484 Extremely Low Income (ELI) units, or 50% of its Very Low Income RNHA allocation. ELI units are particularly important to people with developmental disabilities, and some of the City's planned production of ELI units should be subject to a preference for people with developmental disabilities.

Policy and Program Recommendations

The City of Santa Clara has a responsibility not simply to assess the housing needs of people with developmental disabilities but also to create and implement policy, zoning, program and other changes that make it more feasible for affordable housing developers to include people with developmental disabilities in their housing plans. Since its last Housing Element, the City of Santa Clara approved two new inclusive affordable housing projects, 2330 Monroe Street and The Meridian, which will create 26 new apartments subject to a preference for people with developmental disabilities who need coordinated onsite services funded by the San Andreas Regional Center. However, the city still has a long way to go in meeting the housing needs of adult residents with developmental disabilities. Over the course of the next Housing Element cycle the need for deeply affordable housing paired with coordinated supportive services will continue to increase as the population of adults with developmental disabilities continues to grow and outlive aging parents while beds available in licensed facilities continue to decline. In order to meet the increasing needs of the City's population of people with developmental disabilities, policies and programs that explicitly promote inclusion of people with developmental disabilities in affordable housing with coordinated services provided by the San Andreas Regional Center are required. Below are examples of programs and policies which can help to prevent homelessness or displacement of these vulnerable residents as well as to provide opportunities for people with developmental disabilities to live in the least restrictive setting of their choosing in line with the Olmstead Decision.

- **Affirmatively Further Fair Housing by Producing More Extremely Low-Income Housing.** Not only is disability the highest-ranked source of Fair Housing complaints in Santa Clara County, a

HOUSING ELEMENT

growing body of Santa Clara County data indicates that Black, Indigenous and other People of Color (BIPOC) with disabilities experience higher rates of severe rent burden than either BIPOC without disabilities or whites with disabilities. Such disparities in the experience of severe rent burden, housing instability and displacement from the City of Santa Clara are attributable to the shortage of housing priced to be affordable to Extremely Low Income (ELI) households with incomes below 30% of Area Median Income. Multiple barriers including high land and construction costs and limited funding make it difficult for developers to produce Extremely Low Income units that would help to reduce such disparities. Local zoning and other policies that lead to increased production of Extremely Low Income units, as well as city staff dedicated to implementing and overseeing those policies, will Affirmatively Further Fair Housing in the City of Santa Clara and decrease displacement and homelessness for the most at-risk residents, including people with developmental disabilities.

Sample Language: The City of Santa Clara's plans to Affirmatively Further Fair Housing for Black, Indigenous and other People of Color, particularly those with disabilities, shall include policies designed to increase the production of Extremely Low Income units, as well as adequate staff capacity to implement and monitor the impact of these policies.

- **Establish and monitor a quantitative goal.** Tracking the City's success in housing people with developmental disabilities is essential to determine whether policies and programs are having an effect in overcoming historic patterns of discrimination and exclusion of people with developmental disabilities from affordable housing. A goal of 100 new Extremely Low-Income housing units for City of Santa Clara residents with developmental disabilities over the period of the 2023-2031 Housing Element would represent meaningful progress towards the total unmet housing need of this special needs group.

Sample Language: The City of Santa Clara shall monitor progress towards a quantitative goal of 100 new Extremely Low Income housing units that are subject to a preference for people with developmental disabilities needing the coordinated services provided by San Andreas Regional Center to live inclusively in affordable housing.

- **Target City-Owned Land, Land Dedicated to Affordable Housing under the Inclusionary Ordinance and City Housing Funds to Achieve City-Specific Priorities.** City-owned land, land dedicated to affordable housing in lieu of providing affordable units under the inclusionary ordinance, and city housing funds are often essential to the development of affordable housing that is financially feasible in the City of Santa Clara. In creating guidelines for the scoring of any competitive proposals for these scarce resources, the City should grant additional points to affordable housing projects that address the housing needs of the residents who are most difficult to house under existing state and federal housing finance programs—for example, by prioritizing proposals with a higher number of Extremely Low Income units or that make a percentage of units subject to a preference for identified categories of special needs people who would benefit from coordinated onsite services, including but not limited to people with developmental disabilities who benefit from services of the San Andreas Regional Center.

Sample Language: In publishing requests for competitive proposals for any city-owned land, land dedicated to affordable housing under the city's inclusionary ordinance or city housing funds, the City of Santa Clara shall grant additional points to proposals that address the city's most difficult to achieve housing priorities, by, for example, providing a greater number of Extremely Low-Income units or committing to make a percentage of the units subject to a preference for people with special needs who will benefit from coordinated onsite services, such as people with developmental disabilities who receive services from the San Andreas Regional Center.

- **Local Density Bonus.** Like many state and federal housing finance programs, the state density bonus program incentivizes the production of housing at the Low and Very Low Income level. But in counties like Santa Clara County, with one of the highest Area Median Incomes in the state, these incentives have the effect of making much of the available affordable housing out of reach for residents on fixed incomes (including seniors and persons with disabilities) or who are working in low wage jobs and are thus unable to meet minimum income requirements to afford the rent assigned to the Very Low Income category. The City of Santa Clara should add additional local incentives to the state density bonus law to make it more responsive to the impact of Santa Clara County's high Area Median Income on the affordability of housing for City of Santa Clara residents who are Extremely Low Income, including special needs populations, for example, people with developmental disabilities.

Sample Language: In addition to implementing the California density bonus statute, the City shall provide an additional local density bonus, incentives, and/or concessions for housing projects that include at least 5% of the units for people at the Extremely Low-Income affordability level, including special needs populations, for example, people with developmental disabilities.

- **Extremely Low-Income Accessory Dwelling Units.** As part of a larger plan to increase the supply of Accessory Dwelling Units (ADUs), the City should consider creating a financing and/or incentives program for homeowners who build ADUs and rent them for at least 15 years at Extremely Low Income rent levels or that are subject to a preference for identified categories of special needs people who would benefit from coordinated onsite services, including but not limited to people with developmental disabilities who benefit from services of the San Andreas Regional Center.

Sample Language: Subject to funding availability, the City shall devise a program of financing and/or incentives for Accessory Dwelling Units subject to rent restrictions for at least 15 years at Extremely Low-Income rent levels and/or target special needs populations, such as people with disabilities who will benefit from coordinated services provided by the San Andreas Regional Center.

HOUSING ELEMENT

- **Reduce Parking Requirements for People with Developmental and Other Disabilities.** Because most adults with developmental disabilities do not drive or own a car, the City of Santa Clara should revise its ordinances to limit parking required for affordable units for people with developmental disabilities to .5 space for each affordable studio or 1 bedroom unit and 1 space for an affordable 2 bedroom unit or larger. A similar reduction is recommended for affordable, physically accessible units.

Sample Language: The City of Santa Clara shall encourage the inclusion of people with developmental and other disabilities in affordable housing by recognizing their transit dependence and establishing lower parking ratios for units targeted to people with developmental and other disabilities than would otherwise be required for affordable housing.

- **Affirmative Marketing of Physically Accessible Units:** Developers are allowed to affirmatively market accessible units to disability-serving organizations in Santa Clara County (i.e., San Andreas Regional Center, Housing Choices Coalition for Person with Developmental Disabilities, Silicon Valley Independent Living Center and others) but rarely take this step. Affirmative marketing is particularly needed by people with developmental disabilities who, because of cognitive, communication and social impairment, often rely on housing navigation services funded by the San Andreas Regional Center to learn about and apply for affordable housing.

Sample Language: As a condition of the disposition of any city-owned land, the award of city financing, any density bonus concessions, or land use exceptions or waivers for any affordable housing project, the City of Santa Clara shall require that the housing developer implement an affirmative marketing plan for state-mandated physically accessible units which, among other measures, provides disability-serving organizations adequate prior notice of the availability of the accessible units and a process for supporting people with qualifying disabilities to apply.

Re: Draft Housing Element Update

Page 2 of 6

state Department of Housing and Community Development. Towards that end, SV@Home is submitting the following comments.

Outreach, Community Input, and targeted Affirmatively Furthering Fair Housing (AFFH) outreach as the foundation of the Housing Element Update process

We do not find that the Draft Housing Element Update shows evidence of the significant public engagement and community participation required to be compliant with guidance provided by the state. The importance of this public engagement and community participation to the development of the Housing Element Update is central to development of each component of the document from the assessment of needs, to the development of policies and programs to address those needs, to the strategies employed to select housing opportunity sites to fulfill the RHNA.

Community Participation means a solicitation of views and recommendations from members of the community and other interested parties, a consideration of the views and recommendations received, and a process for incorporating such views and recommendations into decisions and outcomes. To address these requirements, the housing element must describe meaningful, frequent, and ongoing public participation with key stakeholders. Under AB 686 (Affirmatively Furthering Fair Housing) this requires going beyond simply giving the public an opportunity to provide input and should be proactively and broadly conducted through a variety of methods to assure access and participation of those most impacted by the City's housing needs and least likely to have access to standard modes of community input.

The summary of community engagement efforts and community participation was not included in the Draft Update released for public comment. City Staff explained that an online community survey had closed after the draft was released and that stakeholder meetings were ongoing. During the joint Planning Commission and City Council study session held on July 12th, staff described outreach efforts targeted at increasing participation in the online survey but very little about the process or substance of any additional engagement and solicitation of input. Without the detailed description of this effort it is difficult to assess, but it is clear that the most robust community participation instrument, the online survey, was employed after the draft needs assessment, proposed policies and programs, and sites inventory had been completed.

SV@Home, which had established itself as an interested stakeholder in 2021, and participated in a community meeting and provided comment at an earlier council study session, was notified of the online survey through email on June 20th. I, as a resident of Santa Clara who had expressed an interest in receiving Housing Element Update process updates, received a link to the survey on June 27th. SV@Home was not notified that the draft had been released on July 1. Nor were we notified that a joint Planning Commission and City Council study session would take place on July 12th. We received no notification of earlier study sessions either.

While the participation in the online survey appears to have been significant, it comes too late to inform the draft and is predictably skewed towards older, wealthier, whiter, homeowners. These limits of the survey instrument were discussed at some length during the study session, as was the more specific need to understand the specific needs and priorities of lower-income renters and LatinX respondents. Lower-income, Black and LatinX, renters have been shown to have been disproportionately impacted by the multiple dimensions of the housing crisis. Their perspectives must be disaggregated in community input to reasonably understand their needs. Everybody's input is important, but this falls short of the targeted - early and often - engagement required under AFFH.

 Re: Draft Housing Element Update
 Page 3 of 6

As a result, the Housing Element does not a) provide a summary of public comments and b) explain how the comments were considered and incorporated, including comments that were not incorporated.

Housing Needs Assessment and Evaluation of Past Housing Element Performance

The Housing Needs Assessment does not incorporate local knowledge or analysis. The Housing Needs Assessment is almost entirely taken from the data packet of demographic information provided by the Association of Bay Area Governments. Given the limited outreach and public engagement prior to the release of the Draft Housing Element Update, it has been impossible for the public, or appointed and elected officials, to understand the assessment of needs presented in a way that allows them to comment on or expand the city's understanding of local housing needs. As a result, there is no evidence of any analysis of need, beyond the rudimentary assessment provided by the Association of Bay Area Governments (ABAG), incorporated into the Housing Needs Assessment. ABAG's materials state that the final step for completing the Housing Needs Assessment when using the provided data packets is to "Make meaning and find insights: Add the analysis that contextualizes this data for your jurisdiction and connects housing needs to policies and programs."

SV@Home recommends that the City of Santa Clara conduct additional outreach and analysis of the housing needs data in the draft with the goal of better understanding the housing needs of the city as they are experienced by residents of the city. We would draw particular attention to the AFFH requirement to assess the differences in experiences by race/ethnicity and across neighborhoods within the city. We find little effort to connect the data points showing that LatinX residents, and other members of protected classes, face greater incidents of housing instability and overlapping housing needs.

Lack of engagement on the assessment of the 5th Cycle Housing Element Update. The City failed to solicit and integrate public comment into the assessment of programs and policies adopted in the 5th Cycle Housing Element update. Neither was this assessment process integrated into the study sessions before the Planning Commission and/or the City Council. Partially as a result, what is provided is a less than thorough assessment of the progress made and the barriers that impeded progress during this period. In most cases, as is the pattern with the draft discussion of the proposed 6th Cycle programs and policies, the programs are simply noted as "ongoing" rather than attempting to assess the impact of specific actions taken. This is both less than we believe is required of this process and a missed opportunity to learn from some of the significant successes. City staff may feel it has a handle on these details, but failure to share through this process in a way that is publicly accessible (and accessible to a mostly new Planning Commission and City Council) is not compliant with state guidance and will significantly hamper ongoing public engagement.

SV@Home recommends that the assessment of the 5th Cycle Policies and Programs be incorporated into the more comprehensive assessment of housing needs, including concrete opportunities for public engagement around the lessons learned from these prior efforts. If most of these policy actions will be continued or have yet to be completed and are rolled over into the 6th Cycle update, it is critical that their impact be carefully reviewed. We believe this is a clear process requirement of this update.

Policies and Programs - Housing Needs Constraints and AFFH. An essential component of the Housing Element Update process is making connections for the plan to be responsive to its own findings – assessing the existing housing needs, and those that may be specific to enumerated populations under AFFH

Re: Draft Housing Element Update

Page 4 of 6

requirements, and then showing the work and closing the loop connecting them to specific policies and programs to be implemented in response. We have discussed our concerns with the outreach and engagement meant to inform this process. We have noted the limited assessment of existing programs. Subsequently, we struggle to track the connection between needs and solutions in the draft.

As with many other jurisdictions that we are tracking and reviewing across the state, we believe the lack of detail in the policies and programs included in the draft will not prove to be compliant. From our reading each of the policy and program areas presented are listed as “ongoing.” There appear to be two pieces of policy work that are on a scheduled timeline: the comprehensive Zoning Code update initiated in 2014, which we understand as being part of the state mandate that there be objective development standards in place; and the update of the Inclusionary Housing program. With those exceptions, the proposed policies and programs lack a clear definition of work to be undertaken, provide no clear prioritization, and turn to “study,” “consider,” “continue to monitor,” and “review,” rather than fully operationalizing the steps that will be taken. This portion of the update clearly falls short of the standards and guidance provided by the state and by numerous supporting documents made available from multiple sources over the past year. We have seen the lack of detail, discrete action steps, and clear timelines referenced in multiple HCD comments to another jurisdiction.

We would note that we believe there is a general failure to substantively address housing instability and displacement experienced by protected classes under AFFH in Santa Clara. We would also note that this failure was acknowledged during the study session held on July 16th, during which a number of “Potential Programs to Consider” were presented. Ideally, this is not the time to be taking the temperature of decision makers on key policies. These policies should be crafted in response to identified needs and public engagement. If an elected body is presented with a policy solution to address an identified need and chooses not to pursue that policy, this may or may not risk a non-compliant Housing Element. We believe, however, that identifying existing needs and developing specific policy and programmatic responses is required as a part of this process, and it falls to city staff to show their work and explain their recommended course of action.

SV@Home recommends that the content and description of policies and programs to respond to housing needs and constraints should be made significantly more specific in order to be actionable during the 6th Cycle.

Housing Opportunity Sites Inventory

Avoid Double-Counting 5th Cycle Completed Projects into the 6th Cycle Pipeline Inventory. The pipeline projects listed under Table 13.6-2 have sites labeled as “approved” or “Under Construction” but they do not specify whether they have approved building permits. In an initial review we found major projects listed as “Approved” that were already well under construction having received building permits. Similarly, a number of projects listed as “Under Construction” were found on the Annual Progress Report (APR) lists in prior years. The narrative provided on page 13.6-3 defines “Under Construction” projects as sites with anticipated completion and occupancy permits after June 30, 2022. According to the 5th Cycle Housing Element APR rules, however, projects that acquired their building permits within the planning period would count as progress

August 8, 2022
 Re: Draft Housing Element Update
 Page 5 of 6

towards a jurisdiction's RHNA.¹ As such, projects that have acquired their building permits would not qualify to be included in this 6th Cycle Draft Housing Element sites inventory.

SV@Home recommends that the City of Santa Clara confirm and remove any sites from the inventory that received building permits prior to June 30, 2022, whether listed as "Under Construction" or "Approved".

Overdependence on a few Specific Plan Areas, lacking assessment of development expectations. In general, cities should use an AFFH lens when initially reviewing sites to potentially include in the inventory and should not place too much reliance on sites in major plan areas located in lower-resourced areas. The sites inventory places 95% (4,590 units) of its lower-income sites in three major plan areas north of El Camino Real, all within moderate resourced areas with some sites abutting low-resourced areas. The ability of affordable developments to be competitive for state and federal financing will be more limited in moderate-resource areas. Beyond the failure to plan in higher-resourced areas, this over reliance raises a number of concerns: phasing for specific plan areas is often already planned and is subsequently better known than the potential timing for infill development sites; similarly, the developers' intent for specific sites – commercial, market-residential, affordable-residential – are also more generally more transparent. For these reasons the standard of evidence of likely development in these plan areas should reflect this knowledge.

Failure to incorporate AFFH requirement to spread lower-income sites throughout the City, including higher-resourced areas. The sites inventory should identify and analyze the viability of placing lower-income housing units in high opportunity areas. The highest resourced areas in Santa Clara are located in the southerly sections of the city, which have the highest incomes and schools with the top ranking education scores, as shown in Figure 13.3-22 and Figure 13.3-23. Although investing in lower-resourced areas should also be a priority, **the City of Santa Clara must show efforts to provide access to affordable housing options throughout the entire city.** While located in more areas throughout the city, the distribution of pipeline projects alone does not satisfy this AFFH requirement, as they only make up 15% of the lower-income inventory and are not predominantly located in high resourced areas.²

Obvious areas of opportunities to build lower-income housing in higher-resourced areas would be in Santa Clara's downtown or near Stevens Creek Boulevard, which have General Plan Focus Areas. However, the sites inventory does not take advantage of these potential higher-resourced areas to meet AFFH, nor does the Draft Housing Element discuss why these particular areas should not be included. It is particularly disturbing that the prevalence of neighborhood opposition to new housing development is explicitly used as an explanation of why the sites inventory focuses entirely on plan areas where fewer people currently live. This is explicitly contrary to the state direction that the expectation of AFFH requirements open up areas and neighborhoods that have previously been exclusive and created barriers to economic integration and expanded access to opportunity.

¹ [HCD, Housing Element Annual Progress Report Instructions \(pg 91\)](#)

² [Site Inventory Guidebook](#), Attachment: Summary of New Laws Referenced in the Guidebook (pg. 39): "AB 686 requires jurisdictions to conduct an assessment of fair housing in the housing element, **prepare the housing element site inventory through the lens of affirmatively furthering fair housing**, and include program(s) to affirmatively further fair housing."

HOUSING ELEMENT

August 8, 2022

Re: Draft Housing Element Update

Page 6 of 6

SV@Home recommends that the City of Santa Clara update the sites inventory to include sites in the General Plan Focus Areas located in high and highest resourced areas so as to achieve AFFH requirements of providing affordable housing opportunities throughout the city.³

HCD's base level standards for the sites inventory are high. Lower-income sites must: 1) provide substantial evidence, such as market conditions and stronger development trends than what was provided, that indicate existing non-residential use will be discontinued or will not be an impediment to future residential development; 2) demonstrate that there is clear developer interest in redeveloping each site within the planning period, and 3) incorporate potential constraints (e.g. environmental, parking, open space, etc.) into the inventory's realistic capacity calculations consistent with HCD's Site Inventory Guidebook (per Government Code section 65583.2(c)(2)). An explanation of the factors leading to these conclusions in the site-specific analysis should also be provided.

The policies and programs listed in the Draft Housing Element need to support the efforts to successfully build-out the sites inventory. Chapter 13.6 should summarize and be clearly reflective of the outcomes from the proposed policies and programs outlined in Chapter 13.2 of the Housing Plan in order to make the identified sites viable for development without foreseeable constraints, within the planning period.⁴

Closing

The City of Santa Clara's Draft 6th Cycle Housing Element falls short of the statutory requirement at multiple levels, from its failure to elicit and reflect community input, to its deficient analysis of needs, to its absence of concrete programs with implementation details and timelines. We also believe the sites inventory falls significantly short of the AFFH requirements for this process. We encourage HCD to issue findings that the Draft does not substantially comply with Housing Element Law and direct the City to correct these and other deficiencies which may be identified. We would acknowledge again, that City staff have made it clear that they intend to continue to solicit input and refine the current draft prior to final review and approval by the City Council. We believe this provides opportunities to address deficiencies, but these actions will need to be significant.

Sincerely,

Mathew Reed
Director of Policy

³ [Site Inventory Guidebook](#), Background/Purpose, Housing Element Site Inventory Requirements (pg. 3): "When determining sites to include in the inventory to meet the lower income housing need, HCD recommends that a local government **first identify development potential in high opportunity neighborhoods**. This will assist the local government in meeting its requirements to affirmatively further fair housing and ensure developments are more competitive for development financing... A site inventory and analysis will determine whether **program actions** must be adopted to "make sites available" with appropriate zoning, development standards, and infrastructure capacity to accommodate the new development need."

⁴ ABAG Summary of Housing Element Reviews: Sites Inventory (pg. 3): "For non-vacant sites, most jurisdictions will need to provide substantial evidence that the existing use is not a barrier to redevelopment. This is a high bar and will require both *site-specific* analysis and a summary of development trends. Additionally, jurisdictions should **summarize policies and programs that support residential development on proposed redevelopment sites**"

To: Adam Marcus <amarcus@santacclaraca.gov>
Cc: Hadiyah Fain <hfain@lsahomes.org>
Subject: comments to the 23-31 Housing Element

Hi Adam,

Thanks for taking the time to visit the LSA Cypress home. Cypress is a licensed residential care home.

As I mentioned I had a chance to review chapter 13.2 Housing Plan and have some comments I'd like to share.

My general comment is that otherwise eligible individuals should not be excluded because they choose to or are already living in a licensed residential care home. These individuals need the support just as much as there counterpart.

Here are some additional comments to specific section in the Housing Plan.

Action 1: The 4th objective – Support low-income housing alternatives such as housing for persons with disabilities should be expanded specifically to include licensed residential care homes.

Action 3: Affordable Housing Incentives and Facilitation. The construction of affordable housing should also include residential care homes as a type of facility and funding to at least the same level per person as multiunit projects.

Action 4: Maintenance of Housing Stock should include residential care homes in the definition of who is qualified to receive maintenance.

Best,

Dana

**FIGURE 7: FORMAL COMMENT LETTER: ANNE PAULSON**

From: Anne Paulson <anne.paulson@gmail.com>
Sent: Monday, August 01, 2022 4:11 PM
To: John Davidson <JDavidson@SantaClaraCA.gov>; HousingElements@hcd.ca.gov
Subject: City of Santa Clara Housing Element Update: Approvals and Pipelines

Dear John Davidson,

Santa Clara's Housing Element shows a city that is developing, and has a lot of areas where multifamily housing can be built. But the description of the approval process is vague and confusing, and parcels and projects are listed in the pipeline and the site inventory without regard to whether they will actually end up being permitted in the next eight years.

The Local Processing Explanation Is Confusing and Lacks Necessary Information

The section on Local Processing and Permit Procedures, (p 13-5,14 ff), is confusing and omits information. For each kind of project—single family housing, small multifamily, large multifamily, huge multi-acre project that requires a General Plan change—the reader wants to learn

- What are the steps, in order, from the initial approach to the city to the granting of a building permit, including General Plan amendments if those are required?
- How long does each one take, and which ones can be combined?
- How many public meetings are required?
- How much does each step cost?
- What is the average and the median time for each step, and what is the average and median time from initial approach to the granting of the permit?
- What is the average/median cost for each type of project?
- How many public meetings, in total, are required for each type of project?
- What fraction of proposed projects end up getting entitled?
- What fraction of proposed projects end up getting building permits?

The document does not give this information.

The document talks about various types of review (Architectural Review, Planned Development, etc.) but doesn't make clear their order, and which ones can be done in parallel. Table 13.5-8 promises Fee Analysis Scenarios, but they are not provided. They need to be provided, and another scenario should be added: a huge project (like 3905 Freedom Circle) that requires a General Plan Amendment.

The fees list, Table 13.5-9, is unclear. Since the document promises a fee analysis for a typical 100 unit project but doesn't provide it, I tried to compute that fee, but I couldn't. For example, the Plan Review Fee is 75% of the Building Permit Fee, but what counts as the Building Permit Fee? Moreover the Santa Clara numbers in the fee table, Table 13.5-6, seem to be much smaller than the fees listed in Table 13.5-9. And it seems that the Technology Fee computations could be streamlined if the city would just multiply the underlying numbers by 1.0337, rather than having readers attempt to work it out.

Recommendations:

- For each typical type of building (ADU, single family house, 10 unit multifamily, 100 unit multifamily, big project that requires rezoning), list each step the applicant must go through, in order, with the time it takes, the number of public meetings it requires,

the approval body or bodies, and how much it costs. I should be able to look at that table for each building type and know how long the whole process takes and how much the whole process costs.

- **Make the fees table comprehensible.** Combining fees might help.

Pipeline Projects and the Site Inventory

Turning to the pipeline projects, Table 13.6-2, I find similar unclarity. A total of 6753 units are listed in Approved projects. This is confusing: if Santa Clara has 6753 approved units in multifamily projects, why did the city only issue 2403 building permits in the last 4 years according to their 2018-2021 Annual Project Report? Why are all these projects not getting building permits, when they seem ready?

The answer is Santa Clara's definition of "approved." Normally, *approved* means a building has been approved on that parcel or those parcels, and the applicant now has only to draw up plans and submit them for a building permit. But that's not true here; instead, *approved* appears to mean that the project is somewhere along the approval cycle, not that it has been fully entitled and the next step is applying for a building permit.

Santa Clara has been rezoning entire industrial areas into neighborhoods for housing. Apparently, a project counts as approved if it's somewhere on the path from the initial General Plan change to the approval of an individual building. For an example, look at 3905 Freedom Circle (Greystar), listed as approved for 1,075 units. The Freedom Circle Focus Area Plan was only adopted in June 2022 (Table 13.6-4). Seemingly, Greystar has to go through some more approval steps before it can apply for a permit. What are those steps? This is what the document should explain, but does not. It looks like there's no certainty that Greystar is going to end up putting up buildings at 3905 Freedom Circle, though.

Instead of counting each approved project for the full number of units, Santa Clara should assume a mortality rate; neighboring San Jose assumes that only 60% of proposed projects will survive to be built. Moreover, the document needs to first make explicit what the full approval path is, and then explain where each project is along that path.

For Proposed projects, the situation is worse, and the projects are even more vague. A project called "Sares Regis" is listed for 300 units. Where is this project to be located? Sares Regis is a developer, not a location. The proposed projects should be listed with more specificity, and should be discounted for the substantial probability that they will not end up going forward.

The Site Inventory should also be discounting projects for the probability they won't be built. On p. 13.6-17, the document says, "full buildout of [the Tasman East Specific Plan] will likely occur by 2038." Then it proceeds to list every single available parcel in Tasman East in the Site Inventory. Since the site will be built out during the next two RHNA cycles, the capacity of those parcels should be discounted by 50%. The Site Inventory lists all the available parcels in the Lawrence State Plan and the Patrick Henry Drive Specific Plan area too, again without discounting. They should be discounted since the city knows the areas will not be built out in the Sixth RHNA Cycle projection period.

Recommendations:

- Be more specific about the stage of approval each project is in.

HOUSING ELEMENT

- Discount pipeline project and site inventory capacity for the probability that the project doesn't get built.

Conclusion

There is plainly a lot of capacity in Santa Clara. What the Housing Element needs to do is explain how this capacity is going to be used to build the RHNA *in the next eight years*. The document needs to be far more clear and explicit about the entire process—the steps, how long the process takes, how much the fees are, what the project mortality is—and where each listed project is along the way. If the analysis shows that Santa Clara is not on target to make the RHNA, then the steps need to be sped up and/or the process needs to be altered so that a higher fraction of projects end up surviving the process and receiving building permits.

Sincerely,

Anne Paulson

From: Anne Paulson <anne.paulson@gmail.com>
Sent: Monday, August 01, 2022 4:13 PM
To: John Davidson <JDavidson@SantaClaraCA.gov>; HousingElements@hcd.ca.gov
Subject: City of Santa Clara Housing Element Update: Programs for Affordable Housing

Dear John Davidson,

Like most jurisdictions, Santa Clara has been building mostly Above Moderate housing. Like other jurisdictions, Santa Clara is nowhere close to building below market units at a rate that would satisfy its Sixth Cycle below market RHNA.

So, it would make sense for the Housing Element to include programs, with deadlines and milestones, to build more affordable housing. A few policies look like they might be relevant:

Policy B-1: Identify potential sites for affordable housing units in areas of "high opportunity" as defined by the state.

Policy B-4: Identify and potentially designate surplus land that can accommodate low, very-low, and extremely low-income residential development.

Policy D-1: Continue to identify and apply for funding that supports the development of housing for lower-income and special needs households.

These policies look promising. But then, taking a look at the actions, they aren't actions, just more goals. Or they are vague statements of what the city plans to "explore," instead of what the city plans to do.

The City Needs to Commit to Actual Measurable Actions and Deadlines

The city must commit itself to take real actions, by concrete deadlines.

In Action 2: Affordable Housing Ordinance (p. 13.2-4) instead of "explor[ing] changes to the affordable housing ordinance," the document should *make* changes *by a certain time*. The same goes for changing the affordability requirements for moderate income inclusionary units: the document should say what the change will be and when it will be made.

In Action 1: Provision of a Variety of Housing Types (p. 13.2-4) instead of saying the city will *support* SROs, the housing element should *legalize* SROs and plan for a certain number of SRO units to be built by the end of the planning period. The same goes for homes for disabled people and seniors: the document should *allow* and *plan* for such special-need housing.

In Policy B-4 (p13.2-1) Instead of "potentially designating surplus land," the city should designate surplus land, or commit to doing so by a date certain.

To further encourage all-affordable projects, the city should also

- make all-affordable housing projects buildable by right, with ministerial approval
- remove parking minimums for all-affordable projects
- reduce fees for all-affordable projects

If the city cannot take these actions now for whatever reason, it should identify the reason and commit to taking the action by a certain date within the planning period.

SANTA CLARA

HOUSING ELEMENT

Santa Clara needs to build more affordable housing. The Programs part of the Housing Element needs to say how it plans to achieve this, with specific actions and deadlines.

Sincerely,

Anne Paulson

FIGURE 7: FORMAL COMMENT LETTER: PARTNERSHIP FOR THE BAY'S FUTURE

August 24, 2022

Submitted by email to: Adam Marcus, amarcus@SantaClaraCA.gov

RE: Santa Clara's 6th Cycle Housing Element Update

Dear City of Santa Clara:

Thank you for the opportunity to provide input on the city of Santa Clara's housing element. Your work supporting your community to meet its housing needs is critical in addressing the current housing affordability crisis. We understand that at this moment in the housing element process, your jurisdiction is waiting for comments from HCD. As such, we request that you incorporate additional equitable housing policies into your draft housing element during your next revision. We offer the attached equitable policy resources as well as potential technical assistance from Baird + Driskell Community Planning ("B+D") if your jurisdiction is interested in this level of support.

The Partnership for the Bay's Future ("PBF") is a public-private-nonprofit partnership working to create a more livable Bay Area in which diverse people of all walks of life can afford to live and thrive. To do so, we address the challenges of housing and protecting tenants through the support of equitable policy change as well as investing in the production and preservation of affordable housing.

In consultation with government leaders, housing policy experts, and communities, we have compiled a list of equitable housing priorities that we request Santa Clara incorporate into the new housing element. In some cases, these are policies that housing element law requires jurisdictions to address as a potential action or recommendation in their housing elements, but in other cases, these are suggested policies that we are raising up as PBF's equitable planning priorities. We are including the following resources for your review and consideration:

- a slide deck covering each priority policy idea, with template language for your jurisdiction to consider,
- examples of places where the policy has been adopted, and
- additional links and resources.

We believe that Santa Clara's current efforts already include some of the listed policies, which we applaud. We also believe that all Bay Area communities can take more steps to make their housing elements more equitable. The attached summaries can be used as resources for staff as they communicate with both decision makers and the public, and we are happy to provide further assistance to incorporate these policies into your housing element as well as help draft talking points that can be tailored for local implementation.

We believe the following policies can play an important role in meeting the requirements of this housing element and supporting thriving communities, and we request that Santa Clara include them in the next housing element draft:

HOUSING ELEMENT

1. Favorable Zoning and Land Use
 - Make multifamily infill easier to develop
 - Allow, require or encourage multifamily housing in more places
 - Allow or encourage missing middle housing in single-family neighborhoods
 - Provide incentives for affordable housing development
 - Provide incentives for affordable ADUs and "missing middle" housing
2. Accelerating Production Timeframes
 - Streamline development approvals and environmental review process for multifamily housing
 - Streamline permitting process for multifamily housing
3. Reducing Construction and Development Costs
 - Ensure local requirements are not making development more expensive without requisite benefits
 - Actively support the use of modular and factory-built construction methods
4. Providing Financial Subsidies: Generate new or dedicate existing revenue for affordable housing
5. Advocating for Rent Control and Just Cause for Eviction Policies
 - Adopt or update rent stabilization policies
 - Adopt or update just cause eviction policies
6. Advocating for Community Land Trusts (CLTs): Support the formation and operation of community land trusts
7. Advocating for Inclusionary Zoning and Impact Fees: Create or review/update inclusionary housing (including in-lieu fees) and commercial linkage fee requirements
8. Inventory of Sites: Ensure that land is equitably zoned for multifamily housing, especially in high-opportunity areas

If you have any questions, please contact me (krusso@sff.org) and our colleagues at Baird + Driskell (Kristy Wang, wang@bdplanning.com, and Joshua Abrams, abrams@bdplanning.com). We will follow up with you shortly to see if we can provide further support, including technical assistance from the B+D team to further explore some of these policies.

Thank you again for the opportunity to provide input into Santa Clara's housing element. We appreciate your efforts to address the housing needs of Bay Area and California residents.

Sincerely,

A handwritten signature in black ink, appearing to read "K Russo".

Re: Santa Clara City Draft Housing Element Update

Dear John Davidson,

Please accept these comments on the above referenced Housing Element Update on behalf of the members of Carpenters Local 405, which represents working men and women of Santa Clara City and Santa Clara County. We appreciate the opportunity and look forward to working together on this important endeavor.

To meet the urgent need for housing units outlined in the State's Regional Housing Needs Allocation (RHNA), as well as the policy goals outlined in the Santa Clara City Housing Element and larger General Plan, it is vital that Santa Clara City support efforts to build the local construction workforce. Local 405 has long been at the forefront of training the next generation of construction workers, opening pathways to the industry for diverse and traditionally underserved populations, and embracing new technologies and delivery methods to expedite the construction of much needed housing.

Without an intervention, Santa Clara City is not likely to reach its RHNA housing allocation. The City needs to build 11,632 housing units¹ over the next 8 years. The current Draft Housing Element has higher Moderate, Low, and Very Low Income housing unit allocations than the 5th Cycle Goals, all of which were not met. Critically, since 2014, only 16% of Very Low-Income, 26% of Low-Income, and 14% of Moderate-Income housing goals were met.² These issues raise concerns for the City's ability to meet affordable housing goals: a top concern for various city stakeholders, including community members.

There are practical solutions to address Santa Clara City's housing shortages. To support the policy goals of the Housing Element, Local 405 is requesting that the City add local hire and apprenticeship requirements to the final Housing Element for all residential construction projects larger than 10 units. The standards Local 405 is proposing in this comment letter would help to ensure greater benefits for the broader community, help ensure that construction labor

HOUSING ELEMENT

needs are met, and guarantee that new residential development projects within the City are making needed investments in the region's skilled construction industry workforce.

The City Should Bar Issuance of Building Permits Unless Each Future Residential Development of 10 units or Above has a Viable Apprenticeship Program and Local Hiring Requirements

The Carpenters propose the following additions to the Municipal Code of Santa Clara City for any residential project larger than 10 units

Permitting requirements in the Municipal Code of Santa Clara City.

A person, firm, corporation, or other entity applying for a building permit under the relevant section of the Municipal Code of Santa Clara City, California shall be required to comply with the apprenticeship, healthcare, and local hire requirements of the Housing Element and General Plan. Failure to comply with the requirements set forth in this section shall be deemed a violation of this article.

Apprenticeship:

For every apprenticeable craft, each general contractor and each subcontractor (at every tier for the project) will sign a certified statement under penalty of perjury that it participates in a Joint Apprenticeship Program Approved by the State of California, Division of Apprenticeship Standards **OR** in an apprenticeship program approved by the State of California Division of Apprenticeship Standards that has a graduation rate of 50% or higher and has graduated at least thirty (30) apprentices each consecutive year for the five (5) years immediately preceding submission of the pre-qualification documents. The contractor or subcontractor will also maintain at least the ratio of apprentices required by California Labor Code section 1777.5.

Local Hire Policy:

Contractor will be required to provide documentation that the contractor will hire a minimum of twenty-five percent (25%) of staff for any job classification with more than four (4) employees employed whose primary residence, which is not a post office box, is, and has been, within Santa Clara county within 180 days of the expected date of issuance of the Notice to Proceed for the project.

The housing infrastructure in Santa Clara City has not kept up with increased employment opportunities. From 2010-2035, there are projected to be 30% more job openings than available housing in Santa Clara County.³ Additionally, 40.3% of people who work in Santa Clara

³ Page 3-23: Santa Clara 2010-2035 General Plan

County do not live in the County.⁴ Half of the workers who can afford to live in Santa Clara City are cost-burdened by housing expenses.⁵ As Santa Clara City grows, a lack of diverse and affordable housing prevents workers from being able to live and work in the City. A commitment to supporting local residential construction workers and apprenticeship programs can bridge the gap between economic opportunities and suitable housing options in Santa Clara City.

Local 405 has implemented many programs that will enable the City to meet the General Plan and Housing Element goals. These programs include a robust Joint Apprenticeship Training Committee, vigorous utilization of apprentices in Santa Clara City, healthcare coverage for all members and their families, and innovation within the construction industry.

Joint Apprenticeship Training Committees (JATC's), such as the Carpenters Training Committee for Northern California (CTCNC), are a proven method of career training built around a strong partnership between employers, training programs and the government. This tripartite system is financially beneficial not only for the apprentice, but is a major benefit for the employer and the overall economy of Santa Clara City. The CTCNC monitors current market conditions and adjusts the workflow of apprentices to meet the needs of the community, heading off any shortage of skilled workers. History has demonstrated that strong utilization of apprentices throughout the private sector helped California builders produce millions of units of housing.

CTCNC recruitment strategies include robust diversity and inclusionary outreach programs, such as pre-apprenticeship, with proven results in representative workplaces and strong local economies. It is imperative that our underserved populations have supportive and effective pathways to viable construction careers, while ensuring that employers are able to find and develop the best and brightest talent needed to thrive in a competitive economy.

Employer-paid health insurance plans for our members and their families provides preventative services to stay healthy and prevent serious illness. Timely care reduces the fiscal burden for our members and their families, and significantly reduces the utilization of safety-net programs administered by Santa Clara City and Santa Clara County.

Embracing new technologies and delivery systems will have a significant impact on the construction industry, particularly the residential sector. Increasing housing delivery methods reduces project durations and provides Santa Clara City residents housing sooner. Local 405 is at the forefront of ensuring that new construction technologies deliver those benefits while also creating work opportunities for those already in the trades as well as those looking to begin a construction career.

Local 405 is in a unique position to address many of the key ideas outline in Santa Clara City Housing Element Update. By investing in the training and utilization of apprentices, performing

⁴ United States Census Bureau: OnTheMap (Inflow/Outflow Job Counts for Santa Clara County in 2019-latest available data)

HOUSING ELEMENT

outreach to ensure that the workforce closely mirrors the demographics of our local community, providing employer-paid healthcare for our members and their families, and promoting innovation in the residential construction sector, Local 405 is prepared to assist in closing the affordability gap in Santa Clara City and the Bay Area. We look forward to engaging City staff and elected leaders as the Housing Element moves forward and working cooperatively to bridge the needs of the City with the skills and tools of Local 405.

Thank you for your time and consideration of these comments.

Sincerely,

A handwritten signature in blue ink that reads "Samuel Munoz".

Re: City of Santa Clara Draft Housing Element
Comments of Housing Action Coalition

Dear Mr. Davidson:

On behalf of the Housing Action Coalition,¹ we write to comment on the draft 2023-2031 Housing Element for the City of Santa Clara.

The draft Housing Element does not meet the City's obligation to plan and provide for affordable housing. Absent substantial revisions, it may be found in violation of state law.

A. The City Includes Sites That Are Not "Suitable And Available," Because They Do Not Have A "Realistic And Demonstrated Potential" For Redevelopment During The Planning Period To Meet The Need For Housing.

One of the most concrete aspects of any housing element is the inventory of land "suitable and available" for residential development to meet the city's regional housing need by income level. Government Code § 65583(a)(3); HCD Housing Element Site Inventory Guidebook at p. 1 (HAC Appendix Tab 1). The list is a specific means of evaluating whether the City has adequately planned for development of housing for all income levels, and to identify how much land will need to be rezoned to make it possible to provide for the housing needs of the community as it grows. Where nonvacant sites are listed, there must be a "realistic and demonstrated potential for redevelopment" during the next eight years. Government Code § 65583(a)(3). Where nonvacant sites are not zoned for residential development, the City must rezone them within a specified timeframe. *Id.* § 65583.2(a), 65583(c).

¹ The Housing Action Coalition is a nonprofit that advocates for building more homes at all levels of affordability to alleviate the Bay Area and California's housing shortage, displacement, and affordability crisis.

HOUSING ELEMENT

John Davidson
November 30, 2022
Page 2

To address past abuses – including cities listing unrealistic sites – the California Legislature created a high standard for listing nonvacant sites, particularly where a city claims that the site is suitable and available for redevelopment as housing affordable to those with below average incomes. Where nonvacant sites are used to address over 50% of the need for affordable housing for those with lower incomes, the City must show the realistic and demonstrated potential for redevelopment by making formal findings that the existing use does not impede residential development “based on substantial evidence that the use is likely to be discontinued” during the planning period. Government Code § 65583.2(g)(2) (final sentence).

The current draft does not meet the requirement that it identify sufficient sites that are realistic, suitable and available. The City relies heavily on the speculative and unlikely assumption that existing uses of buildings in Santa Clara by the technology industry will cease during the next eight years, with research facilities and data centers being torn down to construct affordable housing. It relies on sites too small for practical development by affordable housing developers, and even lists a fire station that it has no plans to move. It also fails to address the fact that many of the sites are being re-listed, because they were not developed or approved for housing during the last eight years, without a commitment to rezone them for “by right” approval.

1. The Six Data Center Sites Are Not Likely To Be Redeveloped As Housing During The Next Eight Years.

(APN 216-33-033, 216-33-045, 216-33-025, 097-46-015, 104-04-076, and 104-04-077)

Several sites on the site inventory– those located at 2960 Corvin, 2970-3000 Corvin, 3030 Corvin, 5101 Lafayette, 4650 Old Ironsides, and 4700 Old Ironsides – are currently used as large-scale data centers.² Santa Clara is a favored location for data centers because its municipal electric utility provides power at less expensive rates than PG&E, and because its location in Silicon Valley reduces signal transmission times between the data center customer and the data center. See HAC Appendix Tab 2 (“In particular, Santa Clara has become the valley’s principal data center hub . . . The municipal utility, Silicon Valley Power, offers slightly lower rates in Santa Clara than its competitor, PG&E, and this has attracted numerous data center developers.”); HAC Appendix Tab 3. Santa Clara’s optimal location and utility rates make it

² The sites were listed on the August 22, 2022 draft of the inventory using APN numbers 216-33-033, 216-33-045, 216-33-025, 097-46-015, 104-04-076, and 104-04-077. The current use was not identified, which if not corrected in the final draft would violate Government Code section 65583.2(b)(3). We note that the use of APN numbers throughout the housing inventory, without also stating the address and current use, makes it considerably more difficult for state reviewers and the public to see what the City plans, and to comment on its feasibility. Including both the current use and the evidence of why the current use is expected to be discontinued are required by state law, and we hope that the City will address this issue in the next draft by adding all of the required information.

John Davidson
November 30, 2022
Page 3

particularly unlikely that an existing data center will stop operations and sell to an affordable housing developer for construction of low income housing.

Indeed, each of these data centers were the subject of relatively recent, high dollar acquisitions. The sites were not acquired by residential developers as would be expected if the property were soon to be developed for housing, but by data center operators, making it unrealistic to conclude that they will be demolished during the next eight years to build affordable housing:

- 4650 Old Ironsides (APN 104-04-077) is a 124,400 square foot, two story data center, and was acquired by Menlo Equities in September 2021 for \$35.8 million. Menlo Equities focuses on acquiring data centers and describes the acquisition on their website as “Property is situated in a strong infill location that is the most desirable data center submarket in Silicon Valley.” HAC Appendix Tab 4.
- The property next door, 4700 Old Ironsides (APN 104-04-076), was also acquired by Menlo Equities in September 2021. It is a 90,100 square foot data center, and was acquired for \$28 million. A partner with Menlo Equities was quoted as explaining that the purpose of the acquisition was “because of the increase in the demand for data.” HAC Appendix Tab 5.³
- The data center at 5101 Lafayette (APN 097-46-015) was acquired in November 2016 for \$12.8 million. HAC Appendix Tab 6. The purchaser bought it to continue its use as a data center; the acquirer was a telecommunications provider, (HAC Appendix Tab 7), and it has been used as a data center in the six years since then, with no proposal for redevelopment as housing. The purchaser described their intention for the property as: “We have long targeted Northern California as an expansion opportunity for our zColo data center business.”; “The quality and high-power density of this facility is perfectly matched to the requirements of our leading-edge, Bay Area customers.” HAC Appendix Tab 6.

Notably, this data center was on Santa Clara’s 2015-2023 Housing Element, and despite the Tasman East Specific Plan, the property was acquired during the last Housing Element period for continued use as a data center, not for redevelopment as housing. Four parcels bordering it were combined for the 2300 Calle De Luna project by housing developer Related, but Related was apparently unable to acquire 5101 Lafayette to square off the project site, as would ordinarily be expected if the site were available for residential development.

³ As recently as September 2022, the Santa Clara building department approved re-roofing 4700 Old Ironsides for its existing commercial use, with a project cost of \$150,000. Santa Clara Building Permit Number BLD22-66735.

HOUSING ELEMENT

John Davidson
November 30, 2022
Page 4

- The data centers at 2960 Corvin, 2970 Corvin, 3000 Corvin, and 3030 Corvin (APN 216-33-033, 216-33-045, 216-33-025) were also included in the 2015-2023 Housing Element, and were not redeveloped. They were instead sold in a transaction that continues their existing use, even after the 2016 rezoning of the Lawrence Station area. In May 2017, data center company Equinix acquired them as part of a \$3.6 billion acquisition of a number of data centers. See HAC Appendix Tab 3. The president for the Americas at Equinix explained that the acquisitions in Santa Clara were an attractive part of the package, given the high cost to construct new data centers in Silicon Valley.

The planning department is undoubtedly familiar with the continuing intention to use this site as a data center; there have been a number of planning projects involving installation of additional power systems and energy servers at 2960 Corvin and 2970 Corvin, filed in 2021 and still pending. See Santa Clara Planning Department Record Numbers PLN2021-14844, PLN2021-14845, CEQ2021-01085 and -01086.

Under state housing law, when nonvacant sites are used to meet over 50% of the need for affordable housing – as is the case with Santa Clara’s draft Housing Element – the city must meet a high standard: nonvacant sites are presumed under the law to impede residential development, and the City cannot rely on them without finding, based on substantial evidence, that the property is *likely* to become housing in the next eight years. Government Code § 65583.2(g)(2) (final sentence). Particularly given the recent acquisitions of the data centers by data center companies, and their declared business plans to use them as data centers rather than to re-sell them for development of affordable housing, Santa Clara lacks substantial evidence that these properties will meet the affordable housing needs of the next eight years, and cannot credibly conclude that it is “likely” that the data centers will stop operations. They do not count towards the City’s obligation to plan for very low and low income housing development.

Without these six data center sites, the City’s Housing Element is inadequate because it does not identify sufficient sites to meet the projected regional housing need for very low and low income housing. The draft Housing Element relies heavily on the unsuitable and unavailable data center sites to create the impression that it will meet the housing needs of those who can least afford housing:

APN/Address	Very Low	Low	Moderate
2960 Corvin APN 216-33-033	22	12	12
2970-3000 Corvin APN 216-33-045	79	39	39
3030 Corvin APN 216-33-025	25	13	13
5101 Lafayette APN 097-46-015	71	35	35
4650 Ironsides	390	195	195

John Davidson
November 30, 2022
Page 5

APN 104-04-077			
4700 Ironsides APN 104-04-076	326	164	164
Totals:	913	458	458

See Draft Housing Element 8/22/22 at tables 13.6-9, 13.6-10, and 13.6-11. Without these sites, the City's claimed "RHNA Surplus" becomes a deficit:

	Very Low	Low	Moderate
Claimed Inventory ⁴	3,592	1,972	2,781
Data Centers Not Appropriately Included in Inventory	(913)	(458)	(458)
Total Without Data Centers	2,679	1,514	2,323
RHNA Requirement	2,872	1,653	1,981
RHNA (Deficit)/Surplus	(193)	(139)	342 surplus

See draft at Table 13.6-5. The final Housing Element will need to identify additional, realistic sites for very low and low income housing in order to meet the requirements of state law.

2. The Gemini Rosemont Technology Park Is Not Likely To Be Redeveloped As Affordable Housing During The Next Eight Years

(APN 216-34-079, -083, -084, and -085)

Next, we address four other parcels from the inventory in the Lawrence Station area: APN 216-34-079, -083,⁵ -084, and -085. These parcels are currently used as a research and development office park, under long term leases to Affymetrix (a subsidiary of Thermo Fisher), Cloudinary, Nissan North America, and Intuitive Surgical.

⁴ Based on combination of "Approved and Proposed Projects," "Total ADU Projections," and "Total Capacity – Specific Plan Sites" in table 13.6-5.

⁵ To avoid confusion, note that -083 is listed twice on the inventory (second, and ninth, on the Lawrence Station table 13.6-10), with the acreage split between "high density residential" and "very high density residential."

HOUSING ELEMENT

John Davidson
November 30, 2022
Page 6

As of the time of the passage of the Lawrence Station Area Plan in November 2016, there had been no proposal by the then-owner of these four parcels, Sobrato Organization, to develop any of them as residential. As the plan itself stated, “To date, this entity has not submitted a proposal for development; therefore, commencement of development of these properties is expected to occur subsequent to the proposals described in phase one.” LSAP at section 11.4.⁶

Indeed, six years later, there still has been no proposal for redevelopment of these sites as housing. To the contrary, until 2019 Sobrato continued to lease out the space as a research and development office park, and spent nearly \$62 million on renovations. HAC Appendix Tab 8. In 2018, Sobrato entered into a new ten year lease with Nissan North America for an expansion of their Northern California technology research, and a six year lease with Cloudinary.⁷ In early 2019, shortly before selling the property, Sobrato entered into a long-term lease for 210,000 square feet to Intuitive Surgical. See HAC Appendix Tab 8.

In May 2019, three of the parcels – APN 216-34-083, -084, and -085 – were then sold for a whopping \$170.52 million to Gemini Rosemont.⁸ Gemini Rosemont shows no intention of redeveloping the properties as residential housing. To the contrary, in announcing the deal, its CEO explained that this was an office sector acquisition: “We’re entering the next phase of our multi-pronged initiative to acquire Class A assets in the office sector in targeted, tech-centric coastal and gateway markets, and opportunistically in select target markets across the U.S.,” said Ian Brownlow, chief executive officer for Gemini Rosemont at the time of the company’s relocation. “We will leverage our deep market knowledge and our impressive 25-year track record to identify and acquire those office buildings in which we can unlock value, provide superior tenant services and deliver enhanced returns to our investors.”

Meanwhile, tenant improvements continue to be made, even after the Sobrato sale to Gemini Rosemont. See, e.g., BLD21-63262 (building permit for an estimated \$300,000 of tenant improvements on the second floor of a 5,733 square foot space at 3410 Central Expressway). These are not dilapidated properties where the existing use is about to be discontinued; this is a vibrant and modern research and technology park where the tenants plan to remain.

In light of the current owner’s expressed commitment to the office sector, the long-term leases with technology tenants headquartered in Santa Clara, the tens of millions of dollars recently spent on renovations, and the lack of any indication during the last eight years that anyone wants to redevelop the property as residential, the City cannot credibly claim that there is “substantial evidence” that the property is “likely” to be redeveloped for housing. This property is not going to meet the needs of those with very low, low, and moderate incomes for housing over the next eight years, and should not be counted as likely to meet the RHNA need.

The City’s inventory indicates that it expects the technology park to supply 497 very low income, 249 low income, and 249 moderate income affordable units. The City will need to add

⁶ The Lawrence Station Area Plan, as approved, is at HAC Appendix Tab 9.

⁷ See HAC Appendix Tab 10, Tab 11.

⁸ See HAC Appendix Tab 8; see also Assessor Records at HAC Appendix Tab 12, 13, 14.

John Davidson
November 30, 2022
Page 7

additional inventory to meet the needs for affordable housing on sites that are realistic, suitable, and available to meet the need in these categories.

3. The Pearlman/Himy Office Buildings At 4633, 4655, 4677, and 4699 Old Ironsides Are Not Likely To Be Redeveloped As Affordable Housing.

(APN 104-04-138, -139, -140, and -141)

The four four-story office buildings between Old Ironsides and Great America Parkway at the addresses 4633, 4655, 4677, and 4699 Old Ironsides – parcels numbered 104-04-138, -139, -140, and -141, owned by Pearlman/Himy – should not be considered “likely” to be redeveloped for affordable housing during the next eight years. During the Patrick Henry Drive Specific Plan planning process, the owner of those sites specifically asked for a zoning designation that would authorize building of completely non-residential uses: taller office buildings. The City acceded to this request by creating a new zoning designation, “High Density Flex.”

By claiming that the properties have been rezoned so that it is theoretically possible to build housing on these four parcels, the City attempts to claim credit for meeting a large portion of its RHNA obligation: together, these parcels are claimed to meet the need for 286 “very low” income units, 144 low income units, and 144 units affordable for those with moderate income. As with other nonvacant sites, the City has the burden of citing substantial evidence that the property is “likely” to be used for housing. Here, the owner expressed a desire for “flexibility” – rejecting the City’s initial proposal of housing-only zoning, and requesting creation of a special zoning designation that would allow the owner to build no housing at all. Indeed, at the owner’s request, the Environmental Impact Report studied an alternative referred to as “Maximum Office.” The City’s study of “Maximum Office” alternative applies only to these parcels, since the other parcels in the Patrick Henry Drive Specific Plan area are zoned for residential with only first floor retail/office allowed. Given the strong signals from Pearlman/Himy that it does not have a current intention of building housing on these four parcels, the City does not meet the requirement of showing that it is “likely” that the property will be redeveloped for affordable housing during the next eight years. Meanwhile, the existing use also includes tenants with long-term leases, but the City has done nothing to analyze or investigate when these leases expire, whether the leases contain renewal rights, or whether the existing use would otherwise be an obstacle to the building of housing during the 2023-2031 period.⁹

Indeed, the City’s draft Housing Element effectively concedes the City’s doubt that the Pearlman/Himy properties will be developed as housing during the 2023-2031 period. If the Pearlman/Himy sites are developed as high density offices – and there is every indication that they will be – the City promises that six months after the approval of the office development, it will *then* identify adequate sites for housing development. This seems to be an ordinary

⁹ In fact, publicly available information shows that the four office buildings continue to be marketed for office leases. HAC Appendix Tab 15. The owner continues to sign new office leases, including during 2022. HAC Appendix Tab 16 and 17.

HOUSING ELEMENT

2262 Calle De Luna APN 097-46-026	21,344 sq. ft	21,880 ^{*12} sq. ft

Indeed, the City's own 2015-2023 Housing Element, which listed these same sites, described most of them (all but -025 and -026) as either 0.45 acres or 0.46 acres. *See* 2015-2023 Housing Element at table 8.12-6-4.

Parcels like these, which are smaller than 0.5 acres, cannot be used as part of the site inventory to satisfy the "very low" and "low" categories without a concrete showing, based on prior experience, of why it is realistic to expect that it will be developed for low income housing. The City's Housing Element contains no proof that affordable housing has successfully been

¹¹ This information is available on the County of Santa Clara GIS map online, available at <https://ges.sccgov.org/discovergis/sccmap>; the square footage is available by clicking on the individual parcel, then choosing "Show Planning's Property Profile" to obtain this publicly available information from the Santa Clara County Department of Planning and Development.

¹² Note, the GIS Computed Size shows that -026 is slightly larger than 0.5 acres. In order to include it, the city would need to determine, as part of the Housing Element, that the County GIS system is more accurate than the county assessor's official records, which reflect that the property is smaller than 0.5 acres.

Page 10

developed on sites of this size. The city's RHNA "surplus" is thus overstated by 142 very low, 70 low, and 70 moderate affordable units (and as explained above, is actually a deficit). The City should identify additional sites that are likely to be redeveloped as housing in the next eight years, and which are suitable as sites for affordable housing.

5. The City Has Inappropriately Listed Other Sites As Well.

(1) 3011 Corvin (APN 216-33-021).

Santa Clara City Fire Department Station # 9 serves the Lawrence Station area of the city. It is located at 3011 Corvin Drive. The parcel number is 216-33-021. The City has listed it on its housing inventory, and claims that it will meet part of the RHNA need, because it could be used to build 12 units of affordable housing for those with moderate incomes. However, as far as we are aware, the City has no present intention of selling this property or developing it for affordable housing. Indeed, the Lawrence Station Specific Plan shows that the City intends that the fire station will remain as a public use. The City also listed this parcel on the 2015-2023 Housing Element inventory, and took no steps to make it available for housing. It is not likely to be used for housing in the next eight years, given its existing use. It should be removed, or at least excluded from the totals. This will also help avoid it being used incorrectly as a buffer as part of any "no net loss" analysis during the 2023-2031 period.

(2) 2343 Calle Del Mundo (APN 097-05-111).

Parcel 097-05-111 in the Tasman East area appears to be part of the 2343 Calle Del Mundo project by Summerhill. The rest of the 2343 Calle Del Mundo project site is not listed in the site inventory, presumably because it is already under construction. The City may wish to reevaluate its designation of -111 based on the apparent common ownership with parcel 097-05-110. It should probably be removed, or at least excluded, to avoid being used as part of a "no net loss" analysis during the 2023-2031 period.

B. The Extensive Re-Use Of Sites Requires A New "Use By Right" Zoning Overlay.

In Government Code section 65583.2(c), nonvacant land listed in a prior housing element but not approved for development must be rezoned within three years so that any housing development in which at least 20 percent of the units are affordable to lower income households is entitled to "residential use by right." (i.e., no requirement for conditional use permit, planned development permit, or other discretionary local government review). This would prevent subjective and discretionary permit processes – for example, "architectural review" – from being used to block housing projects that provide affordable housing.

The draft Housing Element for 2023-2031 lists nonvacant land listed in a prior housing element but not approved for development: All of the Tasman East sites on the draft for 2023-2031 were already used on the site inventory for 2015-2023, and all of the Lawrence Station sites on the draft for 2023-2031 were already used on the site inventory for 2015-2023. *Compare*

HOUSING ELEMENT

John Davidson
November 30, 2022
Page 11

2015-2023 Housing Element at tables 8.12-6-4 and 8.12-6-5 *with* draft 2023-2031 Housing Element at tables 13.6-9 and 13.6-10. Under section 65583.2(c), the City is therefore required to implement a program to rezone all of these sites by no later than three years from the adoption of the element, to permit “use by right” for housing developments if 20% of the units are affordable to low or very low income residents.

The City is aware of this requirement, but tries to argue around it, at page 13.6-7 of the draft, titled “Re-Use of Sites.” The City argues that because it rezoned the Tasman East and Lawrence Station sites during the 2015-2023 cycle for a higher density to conform to the General Plan, it can count the sites as “new” for purposes of the 2023-2031 cycle, and ignore that they were identified in a prior housing element. The argument will not hold up in court. The statute unambiguously states that if the site is nonvacant, was “identified” in a prior housing element, and was not approved for development, it “shall not be deemed adequate to accommodate a portion of the housing need for lower incomes households . . .” unless rezoned in the new housing element for “use by right.”

Nor does the City’s “rezoning for higher density” argument fit the facts: The sites were rezoned as part of a Government Code section 65583(c) program (albeit late, as explained in the next section). Indeed, if they had not been rezoned, the city otherwise had a shortfall of sites to address the 2015-2023 RHNA. Moreover, some of them are zoned at the exact same density stated in the 2015-2023 Housing Element. *See, e.g.,* APN 216-33-037.

If the City does not wish to implement a “use by right” overlay, it should remove the Tasman East and Lawrence Station sites from the inventory; almost all of them are being (re-)used to satisfy the very low and low income needs that they were designated to meet in the last Housing Element, and in the absence of a “use by right” rezoning, they do not meet the criteria under 65583.2(c) for being re-used.

C. The City Must Address The Unaccommodated Need From The 2015 Regional Housing Needs Allocation.

The City also failed to implement fully its 2015-2023 Housing Element. The consequence of its failure is that it must address both the unaccommodated 2015-2023 need and the new 2023-2031 need.

Where a city fails to implement a housing element, the unaccommodated need must be quickly accommodated during the next period. Government Code § 65584.09(a). Here, Santa Clara failed to timely implement what it promised in its 2015 Housing Element. The unaccommodated need from that period – the failure to provide adequate sites for lower income housing – carries over, and the city cannot use the same sites to meet both the 2015 need and the 2023 need.

We start with a description of the City’s failure to make available adequate sites to accommodate the regional need identified in 2014. In the 2015-2023 Housing Element, the City stated that it believed the housing need could be accommodated on sites in the El Camino Real,

John Davidson
November 30, 2022
Page 12

Tasman East, and Lawrence Station “focus areas”: areas that the City’s general plan projected as suitable for rezoning as medium or high density residential, or mixed use, but which were not yet zoned to permit residential development. The Tasman East focus area and Lawrence Station focus area were zoned light industrial. The El Camino Real sites were zoned “thoroughfare commercial” or “community commercial”: zoning that did not permit residential construction. No one could build housing on any of the sites in the inventory without rezoning.

Under 65583.02(a), the inventory can only include sites that are (1) vacant and zoned for residential use, (2) vacant and zoned to allow residential development, (3) residentially zoned and capable of being developed at a higher density, or (4) “zoned for nonresidential use that can be redeveloped for residential use, and for which the housing element includes a program to rezone the site, as necessary, to permit residential use . . .” The 2015 inventory was valid, if at all, because of a planned program to rezone all of the sites on the list under 65583.2(a)(4) and 65583(c).

A program to rezone sites to make them available is governed in part by Government Code section 65583(c)(1). That subsection required the City to “identify actions that will be taken to make sites available during the planning period with appropriate zoning and development standards and with services and facilities to accommodate that portion of the city’s . . . share of the regional housing need for each income level that could not be accommodated on sites in the inventory . . . without rezoning . . .” Under 65583(c), the City was required to “set forth a schedule of actions during the planning period, each with a timeline for implementation . . . such that there will be beneficial impacts of the programs within the planning period . . .”

The City’s 2015-2023 Housing Element explained how it would comply with the law: it would engage in a comprehensive rezoning of the entire city to conform with the general plan, “to bring consistency between the Zoning Ordinance and the General Plan, implementing the General Plan goals by facilitating mixed use development and higher density residential development, protecting existing neighborhoods, and incentivizing redevelopment by appropriate development standards and streamlined procedures.” The City stated that it would complete this action by mid-2016. *See* 2015-2023 Housing Element at pp. 8.12-122 – 8.12-123 (“Action 6: Zoning Ordinance”).

The mid-2016 deadline was important; the action needed to be scheduled “such that there will be beneficial impacts of the programs within the planning period,” and also kept the plan for rezoning on track to take place within the required three years. Government Code § 65583(c)(1)(A). Housing could not be constructed unless it were approved; housing would face more hurdles to approval until the rezoning took place; and so removing the obstacle of light industrial or commercial district zoning needed to take place early in the planning period to provide developers the ability to propose and proceed with housing built to meet the needs during the 2015-2023 time period.

By mid-2016, the City still had not completed the comprehensive rezoning that it identified as Action 6. The City blamed problems with its outside consultant for not completing

HOUSING ELEMENT

John Davidson
November 30, 2022
Page 13

it in 2016, and promised it would be done in 2017. But even then, it didn't complete it. The draft was finally circulated for public comment in summer 2022 – while the City was working on the 2023 Housing Element – and won't be voted on by the City Council until sometime in 2023. The draft 2023-2031 Housing Element acknowledges that Action 6 is incomplete, and now lists the comprehensive zoning ordinance update as Action 9 in the new plan: "expected to be completed in late 2022/early 2023" See 2023-2031 draft Housing Element see p. 13.7-5 ("The City is continuing to work on the comprehensive Zoning Ordinance Update"); and p. 13.2-10 ("Action 9: Zoning Ordinance"); see also p. 13.1-1 ("Additionally, the City is nearing completion of a comprehensive Zoning Code update which will further streamline processes with the inclusion of objective standards and new zoning districts that better align with the City's General Plan."); p. 13.2-4.

The City thus did not implement the 2015 Housing Element, and did not rezone, as promised, the sites listed in its 2015-2023 inventory. While the City listed 158 parcels along El Camino Real in its 2015-2023 plan as having the ability to satisfy the housing needs of the community, it left the commercial district zoning in place for the entire 2014-2022 period. To this day, anyone wanting to build housing on most of those parcels (excluding the few that went through the City's discretionary process for a rezoning) needs to apply for a zoning variance, contrary to state law which required not just an expectation of potential rezoning to match the general plan, but actual implementation of the Housing Element by the City. Meanwhile, the City planning staff proposed a rezoning of these sites repeatedly as part of the El Camino Real Specific Plan, but the City Council still has not taken action, and has deferred further discussion. The program actions in the 2015-2023 Housing Element to rezone or provide adequate sites were thus not fully implemented.

Having failed to implement the rezoning as required by state housing law and promised in the 2015-2023 Housing Element to take place by mid-2016, the City is now subject to section 65584.09, which provides:

[I]f a city or county in the prior planning period failed to identify or make available adequate sites to accommodate that portion of the regional housing need allocated pursuant to Section 65584, then the city or county shall, within the first year of the planning period of the new housing element, zone or rezone adequate sites to accommodate the unaccommodated portion of the regional housing need allocation from the prior planning period.

Santa Clara easily accommodated the need for above-moderate income housing during the 2015-2023 period: it issued building permits for 4,606 units. It appears to have accommodated the 2015-2023 need for moderate income housing, at least if project approvals, rather than actually constructed units, are counted. But it fell seriously short for the "very low" and "low" income categories. The City granted building permits for only 289 "very low" income units, 246 low income units, and 125 units affordable to those with moderate incomes. This leaves a substantial shortfall to be addressed from the last period, in addition to the substantial new need for the new period.

November 30, 2022
Page 15

Approvals of Affordable Housing: 1601 Civic Center	106	
Unaccommodated Portion Of 2015-2023 RHNA:	358	236

In determining the affordable housing requirements for its 2023-2031 Housing Element, the City is not allowed to use the same sites or projects to count toward both the 2015-2023 need and the 2023-2031 need. It must instead plan for both the unaccommodated need and the newly allocated need. *See* Government Code § 65584.09(b). This means that the City's analysis at page 13.6-2 is flawed because it engages in double-counting; the City is claiming that the building permits and approvals from 2015-2023 accommodated a portion of the housing need for that period *and* that the same building permits and approvals from 2015-2023 address the newly allocated need for 2023-2031.

Again, the City's failure to follow through on its 2015 Housing Element has a consequence: the City is now obliged to meet the unaccommodated need from the 2015-2022 period as well as the regional need identified for the 2023-2031 period. Adequate sites must be rezoned within one year to address this unaccommodated portion of the 2015-2023 RHNA need.

the calculation itself using the information available to it; this calculation should be viewed as illustrative.

Page 16

D. Conclusion: The City's Site Inventory Needs A Program To Rezone Many More Suitable And Available Sites To Accommodate Its Share Of The Regional Need.

A recap of the issues above, in chart form:

	Very Low	Low	Moderate
Draft Inventory ¹⁷	3,592	1,972	2,781
Data Centers	-913	-458	-458
Gemini Rosemont Technology Park	-497	-249	-249
Sites Smaller Than 0.5 Acres	-142	-70	
4633, 4655, 4677, 4699 Old Ironsides	-286	-144	-144
Fire Station # 9 and Tasman Parcel -011			-35
Total Inventory Without Invalid Sites	1,754	1,051	1,895
RHNA Need for Affordable Housing	2,872	1,653	1,981
+ Unaccommodated Need from 2015-2023	+ 358	+ 236	
= Required Need For Affordable Housing In 2023-2031 Housing Element	= 3,230	= 1,889	1,981
Additional Rezoning Required	1,476	838	86

In addition, the City needs to add a plan to rezone the remaining Tasman East and Lawrence Station properties for residential "use by right" for any housing development proposing 20% affordable units, or find additional sites to cover an additional shortfall.

The City is not without potential solutions: the Planning Department has already prepared a specific plan for El Camino Real that would rezone a large number of sites that may be suitable for housing (this would have included, for example, the 100% affordable housing project at 1601 Civic Center Drive, which would not have then required rezoning after a contentious and years-long process).

¹⁷ Based on combination of "Approved and Proposed Projects," "Total ADU Projections," and "Total Capacity – Specific Plan Sites" in table 13.6-5.

John Davidson
November 30, 2022
Page 17

Looking at sites elsewhere in the City would also help address the requirement, noted in SV@Home's comment, to affirmatively further fair housing. The City's concentration of site inventory in the industrial parks on the furthest boundaries of the city, far away from the better resourced schools and parks of residential Santa Clara south of El Camino Real, appears to violate this obligation, and we hope that the next draft of the site inventory will show a greater dispersal of proposed housing sites.

Respectfully submitted,

A handwritten signature in blue ink, appearing to read 'TBM', is written over the typed name. The signature is fluid and stylized, with a long horizontal stroke extending to the right.

Re: City of Santa Clara Draft Housing Element
Comments of Housing Action Coalition

Dear Mayor, Vice Mayor, Members of the City Council, and Planning Commissioners:

On behalf of the Housing Action Coalition,¹ we write to provide comments on the most recent draft of the 2023-2031 Housing Element for the City of Santa Clara.

The current draft does not comply with state law. Among other problems, it overstates the inventory of realistic and available sites to meet Santa Clara's fair share of the regional need, particularly for lower income units, in two significant ways. First, the draft continues to include sites that are not vacant without proof that the existing use is likely to discontinue during the next eight years. Second, the draft overestimates the development potential, by selective use of data and a miscalculation of the average densities developed. The draft also fails to take constraints into account such as the rezoning of portions of certain parcels as open space/parks or public right-of-way, which would preclude developing housing on that portion. For these and other reasons described below and in our earlier letter, the draft does not comply with state law. The Planning Commission should not recommend it to the City Council, and the City Council should not adopt it. The Council should instead direct staff to revise it by identifying additional realistic and available sites to include on the inventory, geographically dispersed throughout the City, comply with the site inventory requirements and the legal duty to affirmatively further fair housing.

¹ The Housing Action Coalition is a nonprofit that advocates for building more homes at all levels of affordability to alleviate the Bay Area and California's housing shortage, displacement, and affordability crisis.

These comments supplement the earlier comment letter on behalf of Housing Action Coalition dated November 30, 2022.

Page 2

A. The City Includes Sites That Are Not “Suitable And Available,” And Do Not Have A “Realistic And Demonstrated Potential” For Redevelopment During The Planning Period To Meet The Need For Housing.

The City Council is called upon to make a special finding before adopting the Housing Element, and to do so based on evidence. Where, as here, the City claims that lower-income housing will be accommodated by sites that are currently used for other purposes, the City must “demonstrate that the existing use . . . does not constitute an impediment to additional residential development *during the period covered by the housing element.*” And most significantly, state law requires a specific set of findings:

An existing use shall be presumed to impede additional residential development, absent findings based on substantial evidence that the use is likely to be discontinued during the planning period.

Government Code § 65583.2(g)(2). The Council should therefore ask itself, for each and every site on the inventory: What is the existing use? And what is the evidence that the use is likely to be discontinued during the next eight years?

HCD has provided helpful guidance of what kinds of evidence the City Council should look for:

Examples of substantial evidence that an existing use will likely be discontinued in the current planning period include, but are not limited to:

- The lease for the existing use expires early within the planning period,
- The building is dilapidated, and the structure is likely to be removed, or a demolition permit has been issued for the existing uses,
- There is a development agreement that exists to develop the site within the planning period,
- The entity operating the existing use has agreed to move to another location early enough within the planning period to allow residential development within the planning period,
- The property owner provides a letter stating its intention to develop the property with residences during the planning period.”

HCD further explained:

[N]onvacant sites with differing existing uses and lacking in common ownership, whether contiguous or located in the same general area, may not rely on a generalized analysis. While the sites may be located in an area with common economic issues, individual owners may not wish to sell their property or redevelop their site with residential uses. In addition, each site’s existing use,

e.g., grocery store, retail shop, parking lot, and offices, may have lease agreements of different lengths of time or the owner may not wish to relocate or redevelop the site with a more intensive residential use. In this type of situation, use of the same findings for the multiple sites would not be appropriate.

HCD Site Inventory Guidebook (May 2020) at pp. 27-28.

Unfortunately, the current draft of the Housing Element does not meet any of the standards explained by HCD for the sites on the inventory:

- There are leases that extend well into the planning period.
- There are buildings that are not dilapidated, and in fact, some of them have been significantly remodeled and improved within the last ten or even five years.
- There are no demolition permits for existing uses.
- There are no development agreements for any site on the inventory.
- None of the existing uses have agreed to move to other locations early enough within the planning period to allow residential development within the planning period.
- The draft does not indicate that property owners have provided letters stating their intention to develop the property with residences during the planning period.
- The only analysis provided is generalized: that all of the properties are in areas that have been rezoned – in the case of Lawrence Station and Tasman East, many years ago – and others have chosen to develop their properties because of market demand.
- There are different owners and different uses; there are lease agreements with different lengths of time.
- There is no evidence presented that the owners wish to relocate or redevelop the sites with a more intensive residential use.

The lack of evidence or analysis on a site-by-site basis dooms the draft Housing Element; it does not comply with the law because the City Council lacks proof that existing uses are likely to discontinue at each of the sites on the inventory.

To illustrate this point further, we describe four specific examples to show that the City has failed to comply with its obligations under Government Code section 65583.2(c) and (g)(1) and (2) to analyze the evidence and determine which sites are realistic and likely to redevelop. The City Council should not sign off on findings that are not based on substantial evidence.

Santa Clara City Council and
Santa Clara Planning Commission
January 22, 2023
Page 4

1. The Gemini Rosemont Technology Park Is Not Likely To Be Redeveloped As Affordable Housing During The Next Eight Years

(APN 216-34-079, -083, -084, and -085)

In the heart of the Lawrence Station Area Plan is a set of parcels – APN 216-34-079, -083,² -084, and -085 – currently used as a research and development office park, under long term leases to Affymetrix (a subsidiary of Thermo Fisher), Cloudinary, Nissan North America, and Intuitive Surgical. Under Government Code section 65583.2(g)(1), the Housing Element is required to engage in an “analysis of any existing leases or other contracts that would perpetuate the existing use or prevent redevelopment of the site . . .” Despite this legal requirement, the draft does not mention, much less analyze, the existing leases.

As of the time of the passage of the Lawrence Station Area Plan in November 2016, there had been no proposal by the then-owner of these four parcels, Sobrato Organization, to develop any of them as residential. As the plan itself stated, “To date, this entity has not submitted a proposal for development; therefore, commencement of development of these properties is expected to occur subsequent to the proposals described in phase one.” LSAP at section 11.4.³

Indeed, over six years later, there still has been no plan for redevelopment of these sites as housing. To the contrary, until 2019 Sobrato continued to lease out the space as a research and development office park, and spent nearly \$62 million on renovations shortly before the sale. HAC Appendix Tab 8. In 2018, Sobrato entered into a new ten-year lease with Nissan North America for an expansion of their Northern California technology research, and a six-year lease with Cloudinary.⁴ In early 2019, shortly before selling the property, Sobrato entered into a long-term lease for 210,000 square feet with Intuitive Surgical. *See* HAC Appendix Tab 8.

In May 2019, three of the parcels – APN 216-34-083, -084, and -085 – were then sold for a whopping \$170.52 million to Gemini Rosemont.⁵ Gemini Rosemont shows no intention of redeveloping the properties as residential housing, and its tenants Nissan, Cloudinary, Intuitive Surgical, and Affymetrix show no signs of relocating. To the contrary, in announcing the deal, Gemini Rosemont’s CEO explained that this was an office sector acquisition: “We’re entering the next phase of our multi-pronged initiative to acquire Class A assets in the office sector in targeted, tech-centric coastal and gateway markets, and opportunistically in select target markets across the U.S.,” said Ian Brownlow, chief executive officer for Gemini Rosemont at the time of the company’s relocation. “We will leverage our deep market knowledge and our impressive 25-

² To avoid confusion, note that -083 was listed twice on the inventory submitted to HCD (second, and ninth, on the Lawrence Station table 13.6-10), with the acreage split between “high density residential” and “very high density residential.”

³ The Lawrence Station Area Plan, as approved, is at HAC Appendix Tab 9.

⁴ *See* HAC Appendix Tab 10, Tab 11.

⁵ *See* HAC Appendix Tab 8; *see also* Assessor Records at HAC Appendix Tab 12, 13, 14.

year track record to identify and acquire those office buildings in which we can unlock value, provide superior tenant services and deliver enhanced returns to our investors.”

Meanwhile, tenant improvements continue to be made, even after the Sobrato sale to Gemini Rosemont. *See, e.g.*, BLD21-63262 (building permit for an estimated \$300,000 of tenant improvements on the second floor of a 5,733 square foot space at 3410 Central Expressway). These are not dilapidated properties where the existing use is about to be discontinued; this is a vibrant and modern research and technology park where the tenants plan to remain. The assertion at page 13.6-18 of the Adoption Draft that “No recent, significant enhancements have been made to these sites” is simply not true of the Gemini Rosemont Technology Office Park, where \$62+ million in renovations has taken place during the last five years. Site-by-site analysis, rather than blanket assertions, is required to comply with Government Code section 65583.2(g)(2), but the City does not show that it has done so here.

In light of the current owner’s expressed commitment to the office sector rather than redevelopment, the long-term leases with technology tenants headquartered in Santa Clara, the tens of millions of dollars recently spent on renovations, the lack of any indication during the last eight years that the owner wants to redevelop the property as residential, and the lack of any current information showing that the owner intends to evict the tenants before the end of the housing cycle and build housing on these parcels, the City Council cannot make a finding based on “substantial evidence” that the existing use is “likely” to discontinue. This property is not likely to meet the needs for 1,743 units of housing affordable to those with very low, low, and moderate incomes for housing over the next eight years, and should not be counted as such on the site inventory.

2. The Pearlman/Himy Office Buildings At 4633, 4655, 4677, and 4699 Old Ironsides Are Not Likely To Be Redeveloped As Affordable Housing.

(APN 104-04-138, -139, -140, and -141)

The four four-story office buildings between Old Ironsides and Great America Parkway at the addresses 4633, 4655, 4677, and 4699 Old Ironsides—parcels numbered 104-04-138, -139, -140, and -141, owned by Pearlman/Himy—should not be considered “likely” to be redeveloped for affordable housing during the next eight years. During the Patrick Henry Drive Specific Plan planning process, unlike the other owners responding to the Specific Plan proposal, the owner of those sites specifically asked for a zoning designation that would authorize building of completely non-residential uses: taller office buildings. The City acceded to this request by creating a new zoning designation, “High Density Flex.”

By claiming that the properties have been rezoned so that it is theoretically possible to build housing on these four parcels, the City attempts to claim credit for meeting a large portion of its RHNA obligation: Together, these parcels are claimed to meet the need for 1,025 units affordable to those in the very low-, low-, and moderate-income categories. As with other

HOUSING ELEMENT

Santa Clara City Council and
Santa Clara Planning Commission
January 22, 2023
Page 6

nonvacant sites, the City has the burden of citing substantial evidence that the property is “likely” to be used for housing.

Here, the owner expressed a desire for “flexibility” – rejecting the City’s initial proposal of housing-only zoning, and requesting creation of a special zoning designation that would allow the owner to build no housing at all. Indeed, at the owner’s request, the Environmental Impact Report then studied an alternative referred to as “Maximum Office.” The City’s study of “Maximum Office” alternative applies only to these parcels, since the other parcels in the Patrick Henry Drive Specific Plan area are zoned for residential development with only first floor retail/office allowed. Given the strong signals from Pearlman/Himy that it does not have a current commitment to building housing on these four parcels, the City does not meet the requirement of showing that it is “likely” that the property will be redeveloped for affordable housing during the next eight years. Claiming that redevelopment is likely to occur simply because the property has been rezoned to permit residential development, in the face of an owner request to rezone to permit a higher density office use, lacks substantial evidence.

Meanwhile, the existing use also includes tenants with long-term leases, but the City has done nothing to analyze or investigate when these leases expire, whether the leases contain renewal rights, or whether the existing use would otherwise be an obstacle to the building of housing during the 2023-2031 period.⁶ This fails to meet the City’s obligation under Government Code section 65583.2(g)(1).

Indeed, the City’s draft Housing Element effectively concedes the City’s doubt that the Pearlman/Himy properties will be developed as housing during the 2023-2031 period. If the Pearlman/Himy sites are developed as high-density offices – and there is every indication that they will be – the City promises that six months after the approval of the office development, it will *then* identify adequate sites for housing development. This seems to be an ordinary application of the no net loss rule, but the Planning Department describes it as the plan for this set of parcels alone. Instead of identifying adequate, available sites, the City includes the Pearlman/Himy sites despite the owner’s uncertain intention so it can check the box on affordable housing, and asks those who need housing now to “wait and see.” Affordable housing can’t wait while the City uses the Pearlman/Himy sites as a placeholder.⁷ The City cannot make

⁶ In fact, publicly available information shows that the four office buildings continue to be marketed for office leases, and new tenants continue to move in. *See* HAC Appendix Tabs 15-18. Indeed, in the less-than-two months since our November comment letter, it appears that four office spaces in these buildings that were on the market have recently been leased. *Compare* HAC Appendix Tab 15 with new HAC Appendix Tab 18 (attached) (Suites 230 and 355 in 4655 Old Ironsides, and Suites 304 and 438 in 4699 Old Ironsides, marketed for lease in November 2022 but not in January 2023).

⁷ The City is already seriously behind in meeting its fair share of the regional need. While it promised in 2014 to rewrite its outdated zoning law by 2016, the process dragged on for years

Santa Clara City Council and
Santa Clara Planning Commission
January 22, 2023
Page 7

the required findings and should not count the office buildings at 4633, 4655, 4677, and 4699 as meeting the need for suitable and available housing sites.

3. National Instruments Silicon Valley Headquarters Is Not Likely To Be Redeveloped As Affordable Housing In The Next Eight Years.

(APN 104-04-122)

In May 2013, Drawbridge Realty acquired 4600 Patrick Henry Drive, a 50,000 square foot Class A office building on 3.2 acres, at APN 104-04-122. Based on its website, Drawbridge Realty specializes exclusively in commercial and office leases, and does not develop residential projects. HAC Appendix Tab 19.

The long-term occupant at 4600 Patrick Henry was already in place when Drawbridge bought the property: The site is the Silicon Valley headquarters of National Instruments. National Instruments was formerly known as Texas Instruments (which acquired long-time Santa Clara semiconductor company National Semiconductor). The property was fully remodeled, inside and out, less than ten years ago. *See HAC Appendix Tab 20 (showing photos; describing “Complete interior, exterior, and site renovations completed in May 2013”).*

The draft Housing Element does not contain any information about the lease between National Instruments and Drawbridge, or about whether National Instruments intends to continue occupancy on Patrick Henry. This is not a dilapidated building; it was completely renovated less than ten years ago. Rezoning and hoping for redevelopment does not satisfy Government Code section 65583.2(g)(1) or (g)(2). Pointing to redevelopment of other sites by residential developers doesn't show that this particular site's existing use is “likely to discontinue” during the next eight years. Absent substantial evidence that the existing use is likely to discontinue, the National Instruments facility should not be listed as meeting the need for very low- and low-income housing.

and, eight years later, is still incomplete. The City was supposed to plan for 1,745 low and very low income units during the last eight years; instead, only 535 actually obtained a building permit.

Santa Clara City Council and
Santa Clara Planning Commission

4. Great America Technology Park.

(APN 104-53-1, -2, -3, -4, -5, -6, -7, -8, -9, -10, -11, -12, -13, -14, -15, -16, -17, -18, -19, -20, -21, -22, -23, -24, -25, -26, and -27)

At 4701 Patrick Henry Drive is a large office park that has been subdivided into 27 separate parcels, known as the Great America Technology Park. Separate buildings include a range of uses from technology companies to law firms to non-profit organizations. The City does not analyze each parcel, or the uses on each, as required by Government Code section 65583.2(g)(1).

The earlier draft submitted to HCD correctly showed, at Figure 13.6-7, that there was a large number of smaller parcels, as a result of earlier subdivision. We have included the parcel map from the Santa Clara County Assessor's Office, which shows that there are 27 parcels: 26 individual buildings, each with its own parcel number, plus a 27th parcel consisting of the Swiss-cheese common area surface parking lot that surrounds parcels APN 104-53-1 through -26. See HAC Appendix Tab 21.

In the Adoption Draft at Figure 13.6-5, parcel 104-53-016 is shown as a very large, single parcel. This is incorrect. As the parcel map shows, 104-53-016 is Parcel 24 in the sequence, and consists of just 3,408 square feet. By listing a single 3,408 square foot building parcel as covering 9+ acres, the draft seriously errs in providing information for the City Council to make an informed decision about the likelihood that the 26 buildings, each with their own business occupants, owners, and uses, will somehow coordinate and jointly develop their properties, and the common area, during the next eight years. It can be difficult for two adjacent owners to work together to combine parcels and pursue a joint development. Absent substantial evidence that the 27 parcels here have been united under common ownership and/or have a joint plan to cease all office/commercial uses in favor of residential development during the next eight years, this set of parcels should not be included in the site inventory, because the existing uses are presumed to continue and are an impediment to residential use. Government Code § 65583.2(g)(2).

B. The Density Calculations Overstate The Extent To Which The Existing Site Inventory Satisfies The RHNA Need.

Government Code section 65583.2(c) regulates how the number of housing units accommodated on each site is determined:

The inventory shall specify for each site the number of units that can realistically be accommodated on that site and whether the site is adequate to accommodate lower-income housing, moderate-income housing, or above moderate-income housing. . . . The city or county shall determine the number of housing units that can be accommodated on each site as follows:

(1) If local law or regulations require the development of a site at a minimum density, the department shall accept the planning agency's calculation of the total housing unit capacity on that site based on the established minimum density. If the city or county does not adopt a law or regulation requiring the development of a site at a minimum density, then it shall demonstrate how the number of units determined for that site pursuant to this subdivision will be accommodated.

(2) The number of units calculated pursuant to paragraph (1) shall be adjusted as necessary, based on the land use controls and site improvements requirement identified in paragraph (5) of subdivision (a) of Section 65583, the realistic development capacity for the site, typical densities of existing or approved residential developments at a similar affordability level in that jurisdiction, and on the current or planned availability and accessibility of sufficient water, sewer, and dry utilities. . . .

(3) For the number of units calculated to accommodate its share of the regional housing need for lower income households pursuant to paragraph (2), a city or county shall do either of the following:

(A) Provide an analysis demonstrating how the adopted densities accommodate this need. The analysis shall include, but is not limited to, factors such as market demand, financial feasibility, or information based on development project experience within a zone or zones that provide housing for lower income households.

(B) The following densities shall be deemed appropriate to accommodate housing for lower income households:

(i) For an incorporated city within a nonmetropolitan county and for a nonmetropolitan county that has a micropolitan area: sites allowing at least 15 units per acre.

(ii) For an unincorporated area in a nonmetropolitan county not included in clause (i): sites allowing at least 10 units per acre.

(iii) For a suburban jurisdiction: sites allowing at least 20 units per acre.

(iv) For a jurisdiction in a metropolitan county: sites allowing at least 30 units per acre.

Government Code § 65583.2(c)(1), (2) and (3). The draft fails to comply with this statute.

Santa Clara City Council and
Santa Clara Planning Commission
January 22, 2023
Page 10

1. The Site Inventory Is Insufficient Based On Minimum Densities.

In the draft presented to and reviewed by HCD, the City relied on minimum densities as showing the capacity for each site. However, a number of large sites have now been removed from the inventory in response to earlier comments by HCD and others, including Housing Action Coalition. The total capacity of the inventory calculated at minimum density is 4,860, rather than the 7,810 claimed.

Notably, the statute arguably requires use of the minimum densities for cities that have them. Under section 65583.2(c)(1), “If local law or regulations require the development of a site at a minimum density, [HCD] shall accept the planning agency’s calculation . . . based on the established minimum density.” HCD is not given discretion to accept an alternative calculation. The remainder of section 65583.2(c)(1) explains that “If the city or county *does not* adopt a law or regulation requiring the development of a site at a minimum density, then it shall demonstrate how the number of units determined for that site pursuant to this subdivision will be accommodated.” (emphasis added). Because Santa Clara law *does* require minimum densities, the calculation is governed by the first sentence, not the second. While HCD appears to interpret the statute as if it presents two options, the statutory text requires use of the minimum densities based on the zoning laws in effect in Santa Clara. If the statutory text is applied as written, the draft Housing Element fails to list sufficient inventory to meet the regional need.

2. The Site Inventory Is Insufficient Based On Santa Clara’s Own Methodology.

The draft Housing Element discusses the “realistic capacity” calculation – the methodology the City uses to estimate the number of units that each parcel will accommodate for purposes of meeting the RHNA requirements – at pages 13.6-7 through 13.6-10. The draft says it calculates the “realistic capacity” by multiplying the parcel size by the minimum zoned density, and then multiplying by the “average,” for existing and approved projects, of the percent by which each project in a particular Specific Plan exceeded minimum density. The “average” for Lawrence Station Area is claimed to be 191%; the “average” for Tasman East Focus Area Specific Plan is claimed to be 215%; the “average” for the Patrick Henry Focus Area Specific Plan is claimed to be 119%.

A major problem with the draft is that in calculating the “average,” the draft excluded nearly half of the sites that should have been on the list. An average requires looking at all the data; only by listing all of the projects in each Specific Plan area can a true average be calculated. Here’s a complete list of “very high density” projects developed in the Lawrence

Station Area, indicating in ***bold and italics*** the ones that were missing from Table 13.6-3:

Project Name	Min. density [du/ac]	Acres	Units	Actual density [du/ac]	% of minimum density [column 5 divided by column 2]
2904 Corvin	51 du/ac	1.08	145	134 du/ac	134/51 = 263%
<i>2961 Corvin</i>	<i>51 du/ac</i>	<i>1.69</i>	<i>38</i>	<i>22.49</i>	<i>22.49/51 = 44%</i>
<i>3305 Kifer</i>	<i>51 du/ac</i>	<i>0.94</i>	<i>45</i>	<i>47.87</i>	<i>47.87/51 = 94%</i>
3560 Rambla	51 du/ac	2.49	251	100 du/ac	100/51 = 196%
3578 Rambla	51 du/ac	1.72	126	73 du/ac	73/51 = 143%
<i>3580 Rambla</i>	<i>51 du/ac</i>	<i>2.58</i>	<i>286</i>	<i>110.85</i>	<i>110.85/51 = 217%</i>
3517 Ryder	51 du/ac	3.92	328	83 du/ac	83/51 = 163%
				ACTUAL AVERAGE:	160%

The same error of omission was made in calculating the Tasman East “average”; by ignoring half of the data for the Specific Plan area, the draft makes the average appear higher than it actually is:

Project Name	Min./max. density [du/ac]	Acres	Units	Units/Acres	% of minimum density [column 5 divided by column 2]
2233 Calle Del Mundo	100-350	1.22	196	160	160%
2200 Calle Del Mundo	100-350	2.44	580	237	237%
2300 Calle De Luna	100-350	<i>5.52⁸</i>	700	<i>127</i>	<i>127%</i>
2343 Calle Del Mundo	100-350	2.63	347	131	131%
2302/2310 Calle Del Mundo	60-350	0.77	151	196	327%
<i>2354 Calle Del Mundo</i>	<i>60-350</i>	<i>0.50</i>	<i>89</i>	<i>178</i>	<i>297%</i>
<i>5123 Calle Del Sol</i>	<i>100-350</i>	<i>2.62</i>	<i>503</i>	<i>192</i>	<i>192%</i>
<i>5185 Lafayette</i>	<i>100 to 350</i>	<i>1.12</i>	<i>271</i>	<i>242</i>	<i>242%</i>
<i>2263 Calle Del Mundo</i>	<i>100 to 350</i>	<i>1.95</i>	<i>301</i>	<i>154</i>	<i>154%</i>

⁸ On the City’s chart, this is listed as 5.02, which appears to be a typo. The City Planning Department project listing lists it as 5.52, as does the County Assessor’s parcel map. We have corrected the other calculations accordingly.

HOUSING ELEMENT

Santa Clara City Council and
Santa Clara Planning Commission

January 22, 2023

Page 12

<i>2101 Tasman Dr.</i>	<i>100 to 350</i>	<i>9.03</i>	<i>950</i>	<i>105</i>	<i>105%</i>
<i>2354 Calle Del Mundo</i>	<i>60 to 350</i>	<i>0.46</i>	<i>89</i>	<i>193</i>	<i>322%</i>
<i>2225 Calle De Luna & 2232 Calle Del Mundo</i>	<i>100 to 350</i>	<i>2.1</i>	<i>371</i>	<i>183</i>	<i>183%</i>
				ACTUAL AVERAGE:	206%

If applying the “average” by Specific Plan area is indeed the proper way to calculate density as the draft argues, then for Lawrence Station the average is 160% of the minimum density, not 191%; for Tasman East, the average is 206%, not 215%.⁹ For Tasman East, the difference reduces the unit count by 43 units; for Lawrence Station, where the average was more skewed and more acreage is on the inventory, it has a bigger impact: 448 units.

This leaves the Patrick Henry area, where we cannot create a chart, because there is no valid data at all. The single proposed project (Pactron/Summerhill) listed on table 13.6-3 for the Patrick Henry area does not show an average or typical density of an existing or approved project. It does not show what even a single builder has succeeded in building at the listed percentage-of-minimum density. The statute directs that “typical densities of existing or approved residential developments at a similar affordability level in that jurisdiction” is the relevant data set; a single proposed but-not-yet-approved project, and a market-rate one at that, doesn’t meet the minimum test for consideration, because it is neither “typical” nor “existing or approved.” Government Code § 65583.2(c)(2). This rule makes good sense: A proposed project may not be approved or ever built, and so has not been tested by the real world to determine if it reflects the “realistic” capacity¹⁰; City staff may not even have reviewed it for compliance with Santa Clara zoning laws. Meanwhile, “typical” requires more than a handful, and certainly more than one. Because no housing has been built in the Patrick Henry area at all, the City lacks data on which to argue that the statutory directive of applying minimum density based on densities should be ignored or adjusted based on real-world experience. Meanwhile, the City’s calculations fail to account for the possibility that future projects may include commercial or office uses, even though several of the Patrick Henry zoning categories provide

⁹ We also note that at Tasman East, many of the projects included in the average were approved or built before the change in the zoning to allow nonresidential uses on the second and third floors. This increase in the ability to have nonresidential uses may substantially impact the construction mix going forward, which the City has failed to account for.

¹⁰ See Government Code § 65583(a)(3) (requiring a site inventory to show the “realistic and demonstrated potential for redevelopment”); § 65583.2(c) (“The inventory shall specify for each site the number of units that can realistically be accommodated . . .”); § 65583.2(c)(2)(C) (“A site may be presumed to be realistic for development to accommodate lower income housing if, at the time of the adoption of the housing element, a development affordable to lower income households has been proposed *and approved* for development on that site.”) (emphasis added).

this potential. The City should use the minimum densities as the fail-safe for this area of the City, where no housing has yet been built at all.¹¹

3. The Site Inventory Is Insufficient Based On Typical Densities For Highly Affordable Housing Projects.

If a city uses the minimum density under section 65583.2(c)(1), it can also treat the site as appropriate to develop at that minimum density for lower income housing under section 65583.2(c)(3), which provides that sites with a zoned density of at least 30 units/acre are considered adequate for lower income housing. But if the city does not use the minimum density, as the latest draft now proposes, it must differentiate between market-rate and affordable housing projects in developing a realistic estimate. Here, the City's draft is seriously flawed, because it relies almost exclusively on market-rate, rather than affordable, housing projects in calculating the capacity of the inventory.

Section 65583.2(c)(2) was amended in 2017 (AB 1397) to emphasize that "typical densities" are not sufficient; the relevant evidence from which to make a capacity calculation higher than minimum is by comparison to "typical densities of existing or approved residential developments *at a similar affordability level in that jurisdiction.*" *See also* Government Code § 65583(a)(3) (requiring that sites have a "realistic and demonstrated potential for redevelopment during the planning period to meet the locality's housing need for a designated income level.").

A market-rate developer may be able to afford to build 300 units on 2.51 acres, or even 800 units on 6.5 acres, as Sares Regis proposes to do at Patrick Henry. But it is well-recognized that a 100% affordable income development generally cannot afford a project of this magnitude. As the HCD Site Inventory Guidebook explains:

To achieve financial feasibility, many assisted housing developments using state or federal resources are between 50 to 150 units. Parcels that are too small may not support the number of units necessary to be competitive and to access scarce

¹¹ The drafters also made a last-minute change in the creation of Appendix B (the site inventory), claiming that the Patrick Henry area densities should be calculated based on a 72% "percentage of maximum" instead of a 119% "percentage of minimum." This seemingly minor change makes a big difference – about 728 units – but the current draft of the Housing Element does not "demonstrate" why it is valid or realistic, as required. Government Code § 65583.2(c). The draft of the Housing Element had said that a 119% "percentage of minimum" should be used. Only the Appendix B site inventory, which was not circulated until after 5 p.m. on Friday January 20, 2023 – the last business day before the Planning Commission hearing – shows the new methodology. Note also that in the Tasman East area, with arguably the most similar zoning rules to Patrick Henry, the average "percentage of maximum" based on built and approved market-rate projects is only 50%, further casting doubt on the "72% of maximum" claim for Patrick Henry.

HOUSING ELEMENT

Santa Clara City Council and
Santa Clara Planning Commission

Page 14

funding resources. Parcels that are large may require very large projects, which may lead to an over concentration of affordable housing in one location, or may add cost to a project by requiring a developer to purchase more land than is needed, or render a project ineligible for funding.

HCD Site Inventory Guidebook (May 2020) at p. 15. These limitations are why the Legislature provided in AB 1397 that sites smaller than 0.5 acres, or larger than 10 acres, are usually ineligible, absent a specific evidentiary showing, to accommodate the need for lower income housing. *Id.*; Government Code § 65583.2(c)(2)(A) and (B). Indeed, the same law that added section 65583.2(c)(2)(A) and (B) also added the “similar affordability level” language to subsection (c)(2); the Legislature simultaneously added several provisions to ensure that site inventories realistically evaluate whether affordable housing will be produced. AB 1397 (Stats. 2017 ch. 375).

In order to depart from the minimum density, the draft would therefore need to show not just that market-rate projects can achieve higher-than-minimum densities like the 160% average in Lawrence Station, or 206% average in Tasman East, but that “typical densities” for a 100% affordable housing project do so as well, including at the very high densities projected for these sites.

Santa Clara’s draft fails to make this required showing. Of the projects on Table 13.6-3, or even the longer list discussed in the previous section, there is only one project that can be described as having a “similar” level of affordable housing (i.e., 100% affordable): the 1.08 acre project at 2904 Corvin. That project fits the general range of size for affordable housing – at 163 affordable units, it is close to the 50-150 unit range discussed by HCD. But it is one-of-a-kind: the first supportive housing in the City, heavily subsidized, and the only affordable housing project built in any of the three Specific Plan areas. One-of-a-kind is not “typical.”

The remaining site inventory in Tasman East, Lawrence Station, and Patrick Henry is projected to meet the needs for very low-, low-, and moderate-incomes (*see* p. 13.6-10, splitting the capacity 33.33 percent each to very low-, low- and moderate-incomes). Yet the data to support the claimed densities is based exclusively on market-rate projects that did not have this mix of affordability. In the Tasman East area, table 13.6-2 shows that of eleven projects, building 4,459 units of housing, the number of units of very low- and low-income housing accommodated is: zero. This shows that there are not “typical densities of existing or approved residential developments at a similar level of affordability” for this area. As stated above, there has been no housing built or approved in the Patrick Henry area at all; there is no “typical” market-rate project there, much less a typical density for a project with the level of affordability calculated by the inventory.

If Santa Clara wants to estimate a realistic production of affordable housing in the Tasman East, Lawrence Station, and Patrick Henry areas, where large, high density market-rate projects are being built, then it should estimate how much lower-income housing will be built

there based on the actual data.¹² That data shows that housing affordable to those in the very low-, low-, and moderate-income categories is produced at a rate somewhat less than the 12% inclusionary housing mandate under city law. (Which, notably, leads mostly to inclusion of moderate units and no very low- or low-income units for a large number of projects, *see* Table 13.6-2 (Pending and Approved Projects)). The draft fails to make a showing sufficient to satisfy section 65583.2(c), as amended by AB 1397. The real data shows that the current site inventory will never achieve the claimed production of affordable housing that Santa Clara presents in the Housing Element, or that is necessary to accommodate the needs of the community.

The solution is to determine the realistic capacity of the new high-density neighborhoods by projecting market-rate projects with their typical complement of affordable units, and then to supplement it with smaller, geographically dispersed sites to accommodate the remainder of the very low-, low-, and moderate-income need on sites that are realistic in scale and density for affordable housing projects. The City's experience shows that affordable housing developers build within a half-mile of grocery stores and that they build projects in the range of 50-150 units. Building in the Patrick Henry area, for example, satisfies neither of these – the area is currently a food desert (more than one mile to a grocery store) – and the parcel size and minimum density exceeds anything that is realistic and demonstrated for a project with 100% affordable housing.¹³ The City has numerous other opportunities for places where affordable housing developers could realistically build housing, e.g., along El Camino Real, or Stevens Creek Boulevard – if only the City would commit to rezoning to allow housing to be built there. Affordable housing developers should not have to run a years-long gauntlet of seeking special permission to build housing on realistic, underutilized sites, as was done with the Catholic Charities project at 1601 Civic Center. Adequate, available, realistic sites should be rezoned throughout the city to make it possible to realistically build the required amount of housing affordable to all income levels during the next eight years.

¹² If the City instead wants to rely on statutory presumptions like the “deemed adequate” statutory rule of section 65583.2(c)(3) to claim that these sites can be used for lower income housing, it should limit itself to the minimum densities that state law compels HCD to accept. The City's planners may know that even the minimum densities are not realistic for the largest sites (given that the size of the projects substantially exceeds what affordable developers actually build), but they would be able to rely on the statutory presumption, rather than speculative and unrealistic math.

¹³ For example, the projections that the need for 972 units of housing affordable to those with very low, low, or moderate incomes will be met by a project at 4701 Patrick Henry Drive, a 687-unit 100% affordable housing project at 3055 Patrick Henry, or a 664-unit 100% affordable housing project at 3350 Central Expressway, is simply not realistic. The City's experience with affordable projects matches well the HCD guidance about projects of 50-150 units.

Page 16

C. Land Zoned As Parks And Roads Is Not Available For Housing, And Should Be Removed From The Site Inventory.

Santa Clara's Specific Plan process has had significant success in beginning to create new vibrant neighborhoods for housing in the city. As part of the Specific Plan process, industrial parks were rezoned as high-density residential. However, portions of each Specific Plan area were not zoned as residential, but instead were zoned as either public right of way or for open space/parks. These portions cannot be included on the site inventory, and the portions of the parcels that are zoned non-residential should not be counted towards the realistic capacity. See Government Code § 65583.2(a); 65583.2(c).¹⁴

The Lawrence Station Area Plan zoned a strip of land running east-west across the district for parkland, running along what is now named Feliz Road. Part of that park has been built on the portion of the area that has developed as housing: a basketball court between La Rambla and Copper, and the Nuevo Community Garden between Copper and Pancoast. At Pancoast – the edge of the office/R&D park owned by Gemini/Rosemont (see below) – the park and Feliz Road end. Under the zoning laws of Santa Clara, however, if the Gemini/Rosemont owned parcels do end up being developed, the portion zoned as a public right of way (the continuation of Feliz Road) and parkland will not be housing. By failing to deduct the portion of the site that has been zoned as a new public right of way, and as open space/park, Santa Clara overstates the acreage available for development. While the City may have better information on this, based on our rough measurement, it would appear that approximately 2.33 acres of parcels 216-34-084 and -085 are zoned for “public right of way” or “Parks/Open Space” based on the Lawrence Station Area Plan.

The Patrick Henry Specific Plan likewise has zoned a substantial amount of open space/parkland, and new public roadways, to support the development of this neighborhood. While some of these plans may not come to fruition – the two data centers on parcels APN 104-04-076 and -077 will likely not be developed as housing in the next eight years, and the City is unlikely to “take” the land from the data center parcels for a park as shown on the Specific Plan – but other parcels on the inventory do include portions that were zoned “Open Space” (shown in

¹⁴ Under Government Code section 65583.2(a), site inventory can include only (1) vacant sites zoned residential, (2) vacant sites zoned for nonresidential but where residential development is permitted, (3) residentially zoned sites that are capable of being developed at a higher density, or (4) sites that can be redeveloped as residential where there is a plan to rezone the site for residential use. Land zoned as open space, or as a public right-of-way, does not fall under any of these categories because under residential construction is not allowed.

A different way of reaching the same result is that the land not zoned as residential is not properly included in the buildable area of the parcel, affecting the realistic capacity calculation. See Government Code § 65583.2(c)(2) (requiring adjustment of the number of units based on “land use controls”).

green on page 13.6-26). It thus appears that the following parcels should be adjusted on the inventory based on the portion zoned for residential use, as opposed to the portion zoned “Open Space” or where a new public roadway is indicated. While the City has better and more precise information, and is required to perform this analysis under section 65583.2(c)(2) as part of developing a realistic capacity estimate considering site constraints such as zoning laws, we offer the following estimate based on examination of Figure 13.6-4, and the provided scale, to illustrate that this issue materially affects the acreage available for residential housing:

APN	Gross Acreage	Open Space and Right of Way Zoning	Estimated Net Acreage Zoned Residential
104-04-124	4.7 ac	2.32 acres open space	2.38
104-04-128	2.5 ac	0.36 acres open space	2.14
104-04-094, -095	2.0 2.5	1.12 acres open space	3.38
104-04-131	3.8	0.96 acres public right-of-way	3.14
104-53-016	9.06 ¹⁵	2.17 acres open space and public right-of-way	5.12
104-04-136	3.8	1.42 acres open space and public right-of-way	2.6
104-04-138	1.7	1.12 acres open space ¹⁶	0.58
TOTALS	30.06	9.47 acres open space or public right of way	20.59

For the Tasman East Specific Plan, the zoning situation is the murkiest. No zoning map was drawn showing where the open space/parks will go. Instead, the Specific Plan shows circles with the desired acreage of parkland, 5 acres in all, and describes that each zone of the Specific

¹⁵ For purposes of this argument, we will analyze the 27 parcels of the Great America Technology Park as if they were a single parcel with APN 104-53-016, as shown on Figure 13.6-5. As stated above, there are in fact 27 different parcels, and parcel APN 104-53-016 is only 3,800 square feet. See section A.4 above.

¹⁶ The 1.12 acres of open space on this parcel are contingently zoned. If this parcel, zoned “High Density Flex” is developed for nonresidential use (i.e., a higher density office site), then the open space zoning does not apply. The zoning map indicates that the open space requirement only applies if the parcel is developed as high density residential. See * on figure 13.6-4 (“*Public parkland only required with residential development.”). Because this argument assumes that the site is properly included on the inventory (*but see* section A.2 above, explaining why it should not be), the parkland requirement would need to be taken into account in evaluating the acreage available for residential development.

HOUSING ELEMENT

 Page 18

Plan is required to dedicate a certain acreage to parkland. *See* Draft Housing Element at Figure 13.6-2 (page 13.6-23); Tasman East Specific Plan at section 03.7 (p. 34).¹⁷ It also shows two public rights-of-way being added, one going north in the vicinity of APN 097-05-058,¹⁸ and the other going south to Tasman Drive across APN 097-05-056. The City does not explain (1) how much of the acreage on the inventory will be devoted to open space and park uses, instead of residential, or (2) how much a 100% affordable housing developer would need to pay the City to avoid this requirement. Assuming that the parkland constraint is in-kind, as the Specific Plan contemplates, then the remaining acreage would need to contribute approximately one acre,¹⁹ instead of developing them for residential use.

In total, the open space/park zoning and public right-of-way zoning reduces considerably the inventory of (nonvacant) land available for residential development, and sharply reduces the number of units.

¹⁷ The Tasman East Specific Plan, as amended through 12/22/20, is available here:
<https://www.santaclaraca.gov/home/showpublisheddocument/72208/637503896853000000>

¹⁸ Here, Figure 13.6-2 would appear to imply that approved project 097-05-059 has dedicated land providing half of the roadway, and that 097-05-058 will be expected to contribute the other half, since the gap between them is approximately half the width of the other streets shown.

¹⁹ This is a very rough estimate: It essentially takes the 1-acre parkland obligation of the “Center District” and treats it as the joint responsibility of all remaining sites. It assumes that the proposed projects have correctly accounted for their share of the parkland dedication obligation, such that their projects comply with City law, even though they have not yet been approved. If this assumption is incorrect, it would show a further problem with the Housing Element: an uncritical acceptance of a project proposal as reflecting a realistic estimate of capacity. The point here remains that it is the City’s obligation to analyze these constraints, not the public’s. Government Code § 65583.2(c)(2). The estimates we provide here are only to illustrate the significance of the issue to the Housing Element as a whole.

Summarizing the impact of the above discussion by using the same methodology applied in Appendix B:

Specific Plan	Acreage reduction for Parks/Right-of-Ways (Nonresidential Zoning)	Estimate of Units To Be Removed From Site Inventory Due To Non-Residential Zoning ²⁰
Lawrence Station	2.33 acres	227 units
Tasman East	~1 acre	215 units
Patrick Henry	9.47 acres	1,084 units
TOTAL		1,526 units to be removed in very low-, low-, and moderate-income categories

There are two solutions, one good and one awful. The good solution is to take the portion of the parcels zoned for parkland/open space or public rights-of-way off the inventory by reducing the acreage claimed on the inventory, to re-do the capacity math, and then to identify other places in the City that can realistically be redeveloped as affordable housing either based on existing zoning or on a plan to rezone. The awful one is amend the Specific Plans, rezone the open space and the street of these parcels as residential housing, and thwart all of the good land use planning work that the City did in adopting the Specific Plans to create livable neighborhoods from industrial parks. We urge the City to remove from the site inventory the claim that residential uses will be built on the open space and public right-of-way portions of the Tasman East, Lawrence Station, and Patrick Henry Specific Plans.

D. The Extensive Re-Use Of Sites Requires A New “Use By Right” Zoning Overlay.

In Government Code section 65583.2(c), nonvacant land listed in a prior housing element but not approved for development must be rezoned within three years so that any housing development in which at least 20 percent of the units are affordable to lower income households is entitled to “residential use by right.” (i.e., no requirement for conditional use permit, planned development permit, or other discretionary local government review). This would prevent subjective and discretionary permit processes – for example, subjective standards for “architectural review” – from being used to block housing projects that provide affordable housing.

The draft Housing Element for 2023-2031 lists nonvacant land listed in a prior housing element but not approved for development: All of the Tasman East sites on the draft for 2023-

²⁰ For purposes of this chart, we assume that the City’s projected densities – at 191% of the minimum for Lawrence Station, 215% of the minimum for Tasman East, or 72% of the maximum for Patrick Henry – are valid. *But see* section B above.

Santa Clara City Council and
Santa Clara Planning Commission
January 22, 2023
Page 20

2031 were already used on the site inventory for 2015-2023, and all of the Lawrence Station sites on the draft for 2023-2031 were already used on the site inventory for 2015-2023. *Compare* 2015-2023 Housing Element at tables 8.12-6-4 and 8.12-6-5 with draft 2023-2031 Housing Element at tables 13.6-9 and 13.6-10. Under section 65583.2(c), the City is therefore required to implement a program to rezone all of these sites by no later than three years from the adoption of the element, to permit “use by right” for housing developments if 20% of the units are affordable to low or very low income residents.

The City is aware of this requirement, but tries to argue around it, at page 13.6-12 to 13.6-13 of the draft, titled “Re-Use of Sites.” The City argues that because it rezoned the Tasman East and Lawrence Station sites during the 2015-2023 cycle for a higher density to conform to the General Plan, it can count the sites as “new” for purposes of the 2023-2031 cycle, and ignore that they were identified in a prior housing element. The argument will not hold up in court. The statute unambiguously states that if the site is nonvacant, was “identified” in a prior housing element, and was not approved for development, it “shall not be deemed adequate to accommodate a portion of the housing need for lower incomes households . . .” unless rezoned in the new housing element for “use by right.”

Nor does the City’s “rezoning for higher density” argument fit the facts: The sites were rezoned as part of a Government Code section 65583(c) program (albeit late, as explained in the next section). Indeed, if they had not been rezoned, the city would have had a shortfall of sites to address the 2015-2023 RHNA. Moreover, some of them are zoned at the exact same density stated in the 2015-2023 Housing Element. *See, e.g.,* APN 216-33-037.

If the City does not wish to implement a “use by right” overlay, it should remove the Tasman East and Lawrence Station sites from the inventory; almost all of them are being (re-)used to satisfy the very low and low income needs that they were designated to meet in the last Housing Element, and in the absence of a “use by right” rezoning, they do not meet the criteria under 65583.2(c) for being re-used.

E. The City Must Address The Unaccommodated Need From The 2015 Regional Housing Needs Allocation.

The City also failed to implement fully its 2015-2023 Housing Element. The consequence of its failure is that it must address both the unaccommodated 2015-2023 need and the new 2023-2031 need.

Where a city fails to implement a housing element, the unaccommodated need must be quickly accommodated during the next period. Government Code § 65584.09(a). Here, Santa Clara failed to timely implement what it promised in its 2015 Housing Element. The unaccommodated need from that period – the failure to provide adequate sites for lower income housing – carries over, and the city cannot use the same sites to meet both the 2015 need and the 2023 need.

We start with a description of the City's failure to make available adequate sites to accommodate the regional need identified in 2014. In the 2015-2023 Housing Element, the City stated that it believed the housing need could be accommodated on sites in the El Camino Real, Tasman East, and Lawrence Station "focus areas": areas that the City's general plan projected as suitable for rezoning as medium or high density residential, or mixed use, but which were not yet zoned to permit residential development. The Tasman East focus area and Lawrence Station focus area were zoned light industrial. The El Camino Real sites were zoned "thoroughfare commercial" or "community commercial": zoning that did not permit residential construction. No one could build housing on any of the sites in the inventory without rezoning.

Under section 65583.02(a), the inventory can only include sites that are (1) vacant and zoned for residential use, (2) vacant and zoned to allow residential development, (3) residentially zoned and capable of being developed at a higher density, or (4) "zoned for nonresidential use that can be redeveloped for residential use, and for which the housing element includes a program to rezone the site, as necessary, to permit residential use" The 2015 inventory was valid, if at all, because of the planned program to rezone all of the sites on the list under sections 65583.2(a)(4) and 65583(c).

A program to rezone sites to make them available is governed in part by Government Code section 65583(c)(1). That subsection required the City to "identify actions that will be taken to make sites available during the planning period with appropriate zoning and development standards and with services and facilities to accommodate that portion of the city's . . . share of the regional housing need for each income level that could not be accommodated on sites in the inventory . . . without rezoning" Under section 65583(c), the City was required to "set forth a schedule of actions during the planning period, each with a timeline for implementation . . . such that there will be beneficial impacts of the programs within the planning period"

The City's 2015-2023 Housing Element explained how it would comply with the law: It would engage in a comprehensive rezoning of the entire city to conform with the general plan, "to bring consistency between the Zoning Ordinance and the General Plan, implementing the General Plan goals by facilitating mixed use development and higher density residential development, protecting existing neighborhoods, and incentivizing redevelopment by appropriate development standards and streamlined procedures." The City stated that it would complete this action by mid-2016. *See* 2015-2023 Housing Element at pp. 8.12-122 – 8.12-123 ("Action 6: Zoning Ordinance").

The mid-2016 deadline was important; the action needed to be scheduled "such that there will be beneficial impacts of the programs within the planning period," and also kept the plan for rezoning on track to take place within the required three years. Government Code § 65583(c)(1)(A). Housing could not be constructed unless it were approved; housing would face more hurdles to approval until the rezoning took place; and so removing the obstacle of light industrial or commercial district zoning needed to take place early in the planning period to

HOUSING ELEMENT

Santa Clara City Council and
Santa Clara Planning Commission
January 22, 2023
Page 22

provide developers the ability to propose and proceed with housing built to meet the needs during the 2015-2023 time period.

By mid-2016, the City still had not completed the comprehensive rezoning that it identified as Action 6. The City blamed problems with its outside consultant for not completing it in by the deadline of 2016, and promised it would be done in 2017. But even then, the City didn't complete it. The draft was finally circulated for public comment in summer 2022 – while the City was working on the 2023 Housing Element – and won't be voted on by the City Council until sometime in 2023. The draft 2023-2031 Housing Element acknowledges that Action 6 is incomplete, and now lists the comprehensive zoning ordinance update as Action 9 in the new plan: "Complete the comprehensive update to the Zoning Ordinance by early 2023." (p. 13.2-13).

The City thus did not implement the 2015 Housing Element, and did not rezone, as promised, the sites listed in its 2015-2023 inventory. While the City listed 158 parcels along El Camino Real in its 2015-2023 plan as having the ability to satisfy the housing needs of the community, it left the commercial district zoning in place for the entire 2014-2022 period. To this day, anyone wanting to build housing on most of those parcels (excluding the few that went through the City's discretionary process for a rezoning) needs to apply for a zoning variance, contrary to state law, which required not just an expectation of potential rezoning to match the general plan, but actual implementation of the Housing Element by the City. Meanwhile, the City planning staff proposed a rezoning of these sites repeatedly as part of the El Camino Real Specific Plan, but the City Council still has not taken action, and has deferred further discussion. The program actions in the 2015-2023 Housing Element to rezone or provide adequate sites were thus not fully implemented.

Having failed to implement the rezoning as required by state housing law and promised in the 2015-2023 Housing Element to take place by mid-2016, the City is now subject to section 65584.09, which provides:

[I]f a city or county in the prior planning period failed to identify or make available adequate sites to accommodate that portion of the regional housing need allocated pursuant to Section 65584, then the city or county shall, within the first year of the planning period of the new housing element, zone or rezone adequate sites to accommodate the unaccommodated portion of the regional housing need allocation from the prior planning period.

Santa Clara easily accommodated the need for above-moderate income housing during the 2015-2023 period: It issued building permits for 4,606 units. It appears to have accommodated the 2015-2023 need for moderate income housing, at least if project approvals, rather than actually constructed units, are counted. But it fell seriously short for the "very low" and "low" income categories. The City granted building permits for only 289 very-low-income units, 246 low-income units, and 125 units affordable to those with moderate incomes. This leaves a substantial

shortfall to be addressed from the last period, in addition to the substantial new need for the new period.

Even if the City's rezoning of adequate sites – albeit ones where no affordable housing has been built, and may never be – is counted,²¹ the City has a substantial shortfall:

	Very Low	Low
2015-2023 RHNA Need	1,050	695
Building Permits (from Table 13.7-2)	289	246
“Adequate” Sites Rezoned in Tasman East ²²	121	61
“Adequate” Sites Rezoned in Lawrence Station ²³	13	7
Approvals of Affordable Housing (from Table 13.6-2) ²⁴	163	145

²¹ A reasonable interpretation of the term “unaccommodated portion of the regional housing need allocation” would exclude all deductions from the prior RHNA except affordable housing units actually built. After all, no one's actual needs are accommodated by housing that was never built. Using building permits as a proxy for this, the unaccommodated very-low-income need would be 761 units, and the unaccommodated low-income need would be 449. However, the distinction might make very little difference to the ultimate math below: Omitting the rezoned adequate sites in Tasman East and Lawrence Station, and omitting the approved affordable housing elsewhere in the City, would result in a higher number for the “unaccommodated portion,” but these sites could then be counted as meeting the 2023-2031 need if they will result in new housing during the next eight years, as the City argues at p. 13.6-2. The critical point here, as explained in the text, is that the City cannot double-count.

We do not think the City can fairly consider the Patrick Henry rezoning as having accommodated any portion of the need from the prior Housing Element, even for those sites that might be considered adequate in the 2023-2031 cycle, given that it was rezoned so late in the period.

²² We do not include the data center or the sites that are smaller than 0.5 acres, because these sites are not adequate, as the City has recognized by removing them from the inventory of sites adequate for lower income housing. We also put “adequate” in quotes here because we have not analyzed whether the other sites are in fact adequate for lower income housing sites (e.g., suitable, available, realistic); the City should do so as part of its analysis.

²³ We do not include the Gemini Rosemont Technology Park, or the data centers on Corvin that were included in the 2015 site inventory but have been deleted from the 2023 site inventory, because these sites are not adequate. We also put “adequate” in quotes here because we have not analyzed whether the other sites are in fact adequate for lower income housing sites (e.g., suitable, available, realistic); the City should do so as part of its analysis.

²⁴ In calculating this number, we attempted to count those projects listed as “approved” (since proposed projects did not meet the need for affordable housing in 2015-2023), and to

HOUSING ELEMENT

Santa Clara City Council and
Santa Clara Planning Commission
January 22, 2023
Page 24

Approvals of Affordable Housing: 1601 Civic Center ²⁵	106	
Unaccommodated Portion Of 2015-2023 RHNA:	358	236

In determining the affordable housing requirements for its 2023-2031 Housing Element, the City is not allowed to use the same sites or projects to count toward both the 2015-2023 need and the 2023-2031 need. It must instead plan for both the unaccommodated need and the newly allocated need. *See* Government Code § 65584.09(b). This means that the City's analysis at page 13.6-2 is flawed because it engages in double-counting: The City is claiming that the building permits and approvals from 2015-2023 accommodated a portion of the housing need for that period *and* that the same building permits and approvals from 2015-2023 address the newly allocated need for 2023-2031.

Again, the City's failure to follow through on its 2015 Housing Element has a consequence: the City is now obliged to meet the unaccommodated need from the 2015-2022 period as well as the regional need identified for the 2023-2031 period. Adequate sites must be rezoned within one year to address this unaccommodated portion of the 2015-2023 RHNA need.

avoid double-counting those projects that were counted towards building permit goals on Table 13.6-2. We believe that 3905 Freedom, Gateway, and Agrihood were not counted towards building permits, but that Clara Gardens, The Meridian, and 2330 Monroe each had building permits issued and were counted in Table 13.6-2. The City planning department should perform the calculation itself using the information available to it; this calculation should be viewed as illustrative.

²⁵ We note that this site is not included in the Housing Element. If the City has information that it will not be developed, or that the approval is not final, then it would be removed from this calculation.

Santa Clara City Council and
 Santa Clara Planning Commission
 January 22, 2023
 Page 25

F. Conclusion: The Draft Housing Element Cannot Be Certified.

The issues identified in this letter show that the “Adoption Draft” is not yet ready for adoption at all. It contains unrealistic sites, unsupported projections, claims that lower income housing can be built on sites zoned as open space or even public right-of-ways, and other violations of state law. The City cannot make the required findings to support it, because it lacks the evidence to support the claims it makes about whether the existing inventory is sufficient to meet the considerable and pressing need for housing at all levels of affordability. While meeting the deadline is important, passing a valid Housing Element is even more so. It is better to be late than to be wrong, and the City should not want to see its Housing Element invalidated by the State or a court.

Respectfully submitted,

Re: City of Santa Clara Housing Element As Adopted
Comments of Housing Action Coalition

Dear Mr. McDougall and Mr. Jauregui:

This letter will address the capacity calculations the City of Santa Clara used in preparing the site inventory for its adopted Housing Element. As will be explained, the Housing Action Coalition¹ asks that you find the Housing Element not to be in substantial compliance because it overstates the capacity of the site inventory to accommodate Santa Clara's share of the regional need for housing, particularly for lower income categories.

As explained in further detail below, Santa Clara's capacity calculations are flawed because:

1. In the case of the Lawrence Station and Tasman East sites, they are based on incomplete data.
2. In the case of the Patrick Henry sites, they are based on no data.
3. In all three cases, they do not take into account AB 1397, requiring an analysis of typical densities of projects with "a similar affordability level in that jurisdiction."

¹ The Housing Action Coalition is a nonprofit that advocates for building more homes at all levels of affordability to alleviate the Bay Area and California's housing shortage, displacement, and affordability crisis.

California Department of
Housing and Community Development
February 23, 2023
Page 2

A. Background

First, for context, some background on the drafting of the capacity calculation portion of Santa Clara's Housing Element.

The capacity calculations issue is not one that HCD has previously reviewed for Santa Clara. In the earlier August 22, 2022 draft submitted to HCD, Santa Clara used minimum densities (the safe harbor under section 65583.2(c)(1)) to calculate the capacity of the site inventory to accommodate the RHNA. But in a comment letter on November 30, 2022, following HCD's comments, Housing Action Coalition pointed out that a number of sites on the inventory were unrealistic: they had existing uses that were not "likely to discontinue" during the planning period.

In response, Santa Clara removed a number of sites, including six large data centers and a fire station that were unlikely to be redeveloped as housing. But rather than identify new sites for the inventory, Santa Clara instead added only an upward adjustment of the number of units claimed for each site, and an argument that the remaining sites had the capacity to fully accommodate the RHNA.

The final draft of the site inventory, showing the new math, was not made public until after 5 p.m. on Friday, January 20, just days before the January 24 Planning Commission meeting and City Council meeting on January 31. This sharply limited the opportunity for public analysis and comment on this major change to the Housing Element.

We submitted a comment Sunday night, in advance of the Tuesday Planning Commission hearing, but this left limited time for staff to consider that their analysis had omitted important information. Given the approaching deadline of January 31, the Planning Commission and City Council quickly adopted the Housing Element without further changes, and without taking the time to correct any errors.

The Santa Clara Housing Element discusses the "realistic capacity" calculation – the methodology the City uses to estimate the number of units that each parcel will accommodate for purposes of meeting the RHNA requirements – at pages 13.6-7 through 13.6-10. The approach is described at page 13.6-10 in the final paragraph of the section:

Because each Specific Plan has its own distinct land use designations and affordability requirements, realistic capacity for available sites was calculated based on the average of percent above minimum density allowed per Specific Plan of existing and approved projects (see Table 13.6-3). Percent above the minimum density allowed was used to remain conservative, realistic, and to account for the wide range of Specific Plan densities allowed (from 20 du/ac in Lawrence Station to 350 du/ac maximum in Tasman East). . . .

HOUSING ELEMENT

California Department of
Housing and Community Development
February 23, 2023
Page 3

The following averages were used to calculate realistic capacity, per Specific Plan area:

- Lawrence Station Area Plan: minimum densities x 191%
- Tasman East Focus Area Specific Plan: minimum densities x 215%
- Patrick Henry Drive Specific Plan: maximum densities x 72% (based on Specific Plan assumptions) was used as there are currently no existing or approved projects in the Patrick Henry Drive Specific Plan area.

Housing Element at p. 13.6-10.

B. The Lawrence Station And Tasman East “Averages” Are Based On Incomplete Data.

An “average” is not an average unless it includes all of the data. Unfortunately, for both the Lawrence Station and Tasman East areas, Santa Clara’s analysis omitted key data in calculating the multipliers of 191% for Lawrence Station and 215% for Tasman East. The actual averages are lower. While these errors alone might not show that the site inventory is insufficient to meet the RHNA, it is important to correct them because they will be used for No Net Loss calculations in the future.

1. The Tasman East Average Is Actually 160-201%, Not 215%.

At table 13.6-3, Santa Clara lists six projects, and calculates an average “% above allowed minimum density.” However, the average is inaccurate because Santa Clara did not include all existing and approved projects from the Tasman East area. A comparison with Table 13.6-2 – which lists eleven pending and approved projects in the Tasman East area – reveals the error. The following chart shows the correct average, with ***bold and italics*** used to indicate the information that was incorrect or omitted from the table:

Project Name	Min./max. density [du/ac]	Acres	Units	Units/Acres	% of minimum density [column 5 divided by column 2]
2233 Calle Del Mundo	100-350	1.22	196	160	160%
2200 Calle Del Mundo	100-350	2.44	580	237	237%

2300 Calle De Luna	100-350	5.52 ²	700	127	127%
2343 Calle Del Mundo	100-350	2.63	347	131	131%
2302/2310 Calle Del Mundo	60-350	0.77	151	196	327%
2354 Calle Del Mundo	60-350	0.50	89	178	297%
5123 Calle Del Sol	100-350	2.62	503	192	192%
2263 Calle Del Mundo	100 to 350	1.95	301	154	154%
2225 Calle De Luna & 2232 Calle Del Mundo	100 to 350	2.1	371	183	183%
				AVERAGE (mean):	201%
				AVERAGE (median):	160%

Including all of the projects in the Tasman East area shows that the capacity calculation in the adopted Housing Element is inflated by these errors. Note, we have also excluded two additional projects that appear in table 13.6-2 because they are “proposed” rather than “approved”:

5185 Lafayette	100 to 350	1.12	271	242	242%
2101 Tasman Dr.	100 to 350	9.03	950	105	105%

If these two additional projects were included in the list, the average percentage above minimum would go down further, to 196%.

If an average (mean) percentage of 201% is applied (instead of 215%), the total units on the inventory attributable to the Tasman East sites goes from 1,123 to 1,050, a decrease of 73 units. Not a huge difference, but potentially important to the people who might live in those units, as well as to determining when No Net Loss provisions will first apply.

Alternatively, HCD should consider whether a “median” is more appropriate than a “mean” in determining the average. A median avoids skewing the result based on outliers. The significant difference between the mean and the median here shows that outliers – two sites built at 327% and 297% of the minimum density – are leading to a high mean without being reflective of the data set. Using the median of 160% (instead of 215%) would reduce the total units on the inventory in Tasman East from 1,123 to 837 units, a decrease of 286 units.

² On the City’s chart, this is listed as 5.02, which appears to be a typo. The City Planning Department project listing lists it as 5.52, as does the County Assessor’s parcel map. We have corrected the units/acre and % of minimum density calculations accordingly.

HOUSING ELEMENT

California Department of
Housing and Community Development

Page 5

2. The Lawrence Station Average Is Actually 134%-140%, Not 191%.

Table 13.6-3 lists four sites in the Lawrence Station area, comprising 9.21 acres, and then calculates an “average” of 191%. Here too, the site inventory omits other sites developed in the Specific Plan area: the ones listed comprise less than 25% of the 38 acres developed or approved.

It is more difficult to calculate an “average” for the Lawrence Station area because a single project – the Summerhill Nuevo project, comprising 29.4 acres and 988 units – included a large number of parcels, and resulted in areas of higher and lower density mixed in with other public amenities like roads and open space/parks.³ Santa Clara has ignored these elements that lowered the overall density of the project (which averaged just 33.6 du/ac), and instead lists only two (of the three) apartment buildings that were part of the project, as if those two apartment buildings were standalone projects.

Because the mix of density rules applied to the Summerhill project makes the “percentage of minimum” approach challenging to apply, we will present several ideas of how it could have been properly incorporated. Ultimately, however, the point is that Santa Clara’s current approach, by claiming an average that was not based on all of the data, is invalid. Each of these approaches shows that the current multiplier of 191%-of-minimum-density overstates the typical densities in the Lawrence Station area.

The first idea is, as with the Tasman East analysis above, to adjust Table 13.6-3 to simply incorporate the missing data by adding in the other Lawrence Station area projects that were omitted, including the large Summerhill project, and then deleting the two subcomponents of the Summerhill project that were included in Table 13.6-3. The resulting chart would look like this,

³ In our comment letter to Santa Clara on January 21, 2023, we pointed out that the requirements of open space/parks and additional public right-of-ways would reduce the net buildable acreage, and that the site inventory should be adjusted accordingly. See Housing Action Coalition letter dated January 22, 2023 at pp. 16-19 (explaining that 2.33 acres of the Lawrence Station sites, and 9.47 acres of the Patrick Henry sites, are designated for parks or roadways, not zoned for housing). At the hearing before the Planning Commission, the City Attorney’s office responded derisively that this was unnecessary because Santa Clara’s minimum density rules are applied to gross acreage, inclusive of parks and roadways. However, if gross acreage is the appropriate measure as the City Attorney’s office argued, it must be consistently applied: the City cannot cherry-pick the highly dense apartment parcels and ignore that they were approved and built as part of a package with dedicated open space and roadways as part of the same project. The densities of the projects shown on table 13.6-3 are inflated by omitting the “gross acreage” of the parkland and roadways that were dedicated to the City in order to obtain approvals of the high density apartment buildings. The City cannot use net buildable acreages for calculating the capacity multiplier, then apply that multiplier to gross acreages inclusive of parkland and roadway requirements.

with ***bold and italics*** for the missing information, and ~~strikethrough~~ text for the Summerhill Nuevo subcomponents:

Idea 1: Substitute the entire Summerhill project into the chart

Project Name	Min. density [du/ac]	Acres	Units	Actual density [du/ac]	% of minimum density [column 5 divided by column 2]
2904 Corvin	51 du/ac	1.08	145	134 du/ac	$134/51 = 263\%$
2961 Corvin	20 du/ac	1.69	38	22.49	$22.49/20 = 112\%$
3305 Kifer	20 du/ac	1.91	45	23.6	$23.6/20 = 118\%$
3560 Rambla	51 du/ac	2.49	251	100 du/ac	$100/51 = 196\%$
3578 Rambla	51 du/ac	1.72	126	73 du/ac	$73/51 = 143\%$
3505 Kifer (Summerhill Nuevo) ⁴	26 du/ac ⁵	29.4	988	33.6 du/ac	$33.6/20 = 168\%$
3517 Ryder	51 du/ac	3.92	328	83 du/ac	$83/51 = 163\%$
				AVERAGE (mean):	165%
				AVERAGE (median):	163%

However, this first approach overweights the smaller sites to a very significant degree: a one acre site – and one which has very unique attributes, as will be discussed below – is given the same weight as the Summerhill Nuevo site, which used 29 times as much land. This inflates the percentage-of-minimum, and overestimates the site capacities.

The second approach breaks the Summerhill site into smaller components: leaving the two apartment buildings (3560 and 3578 Rambla) on the chart, but then adding the third

⁴ 3505 Kifer is the address for the entire Summerhill project – 988 units – in the Lawrence Station Area Plan. 3560 Rambla and 3578 Rambla are portions of the project (individual buildings), and so are stricken from this chart based on the inclusion of the larger project.

⁵ Because there are three different minimum densities for the Summerhill Nuevo site – 51 du/ac west of Rambla, 8 du/ac north of Boyter, and 20 du/ac east of Rambla – we have estimated the rough proportions of each, and derived a weighted average minimum density. 3.5 acres at 8 du/ac, 17 acres at 20 du/ac, and 7.5 acres at 51 du/ac yields a total minimum number of units of 750 units, divided by 28 acres. The City may have more precise information about the acreage; figuring it out is more difficult because of the subdivision of the lots as part of the project, which renders the current County Assessor's Map unhelpful for this purpose.

HOUSING ELEMENT

Page 7

apartment building, and three hypothetical projects that were also components of the Summerhill Nuevo development: (1) the 41 unit single family lots north of Boyton, (2) the 114 “E-towns” in the medium density portion, and (3) the 176 “Town Flats” in the medium density portion. The parkland and roadway dedications are distributed geographically with the site that they are adjacent to.

Idea 2: Substitute the components of the Summerhill project into the chart

Project Name	Min. density [du/ac]	Acres	Units	Actual density [du/ac]	% of minimum density [column 5 divided by column 2]
2904 Corvin	51 du/ac	1.08	145	134 du/ac	$134/51 = 263\%$
<i>2961 Corvin</i>	<i>20 du/ac</i>	<i>1.69</i>	<i>38</i>	<i>22.49</i>	<i>$22.49/20 = 112\%$</i>
<i>3305 Kifer</i>	<i>20 du/ac</i>	<i>1.91</i>	<i>45</i>	<i>23.56</i>	<i>$23.56/20 = 118\%$</i>
3560 Rambla (Summerhill Nuevo)	51 du/ac	2.49	251	100 du/ac	$100/51 = 196\%$
3578 Rambla (Summerhill Nuevo)	51 du/ac	1.72	126	73 du/ac	$73/51 = 143\%$
<i>3580 Rambla (Summerhill Nuevo)</i>	<i>51 du/ac</i>	<i>2.58 + .91 = 3.49⁶</i>	<i>286</i>	<i>81.95 du/ac</i>	<i>$81.95/51 = 161\%$</i>
<i>Summerhill Nuevo – single family north of Boyton</i>	<i>8 du/ac</i>	<i>3.5</i>	<i>41</i>	<i>11.71 du/ac</i>	<i>$11.7/8 = 146\%$</i>
<i>Summerhill Nuevo – “E-towns”</i>	<i>20 du/ac</i>	<i>6.5</i>	<i>114</i>	<i>17.54 du/ac</i>	<i>$17.5/20 = 88\%$⁷</i>

⁶ The additional acreage is for the added roadway and community center that is bordered on three sides by the three apartment buildings. Rather than distribute the acreage to all three apartment buildings (and correct the acreage for 3560 and 3578 Rambla), we here assign all of the roadway and community center land west of Rambla to the largest of the three apartment buildings.

⁷ Note that here, the percentage for these two subcomponents of the Summerhill Nuevo project is shown as less than the minimum density. This is because the bulk of the parkland for the entire project is in the area east of Rambla. If a portion of the parkland parcels was instead proportionally allocated to the apartment buildings including 3560 and 3578 Rambla—where the City used only the acreage of the parcels that the buildings are on—then all of the components of the Summerhill project would be compliant with the minimum density zoning rules. (See “Idea 3” below). There is an additional wrinkle that for a set of buildings north of Boyton, the Lawrence Station Area Plan zoned the land as “very high density” (minimum 51 du/ac), but the

<i>Summerhill Nuevo – “Town Flats”</i>	20 du/ac	10.5	176	16.8 du/ac	$16.8/20 = 84\%$
3517 Ryder	51 du/ac	3.92	328	83 du/ac	$83/51 = 163\%$
				AVERAGE (mean):	147%
				AVERAGE (median):	143%-146%

A third approach is to limit the analysis to those projects on the land zoned as high density, but to assign a proportionate share (by unit count) of the parkland and roadway dedications that were part of the Summerhill Nuevo project to the three apartment buildings for that project:

Idea 3: High Density Projects Only, But Including Open Space/Roadways

Project Name	Min. density [du/ac]	Acres	Units	Actual density [du/ac]	% of minimum density [column 5 divided by column 2]
2904 Corvin	51 du/ac	1.08	145	134 du/ac	$134/51 = 263\%$
3560 Rambla	51 du/ac	$2.49 + 1.08 = 3.57$	251	70 du/ac	$70/51 = 137\%$
3578 Rambla	51 du/ac	$1.72 + 0.54 = 2.26$	126	56 du/ac	$56/51 = 110\%$
3580 Rambla	51 du/ac	$2.58 + 1.24 = 3.82$	286	75 du/ac	$75/51 = 147\%$
3517 Ryder	51 du/ac	3.92	328	83 du/ac	$83/51 = 163\%$
				AVERAGE (mean):	164%
				AVERAGE (median):	147%

One virtue of this last approach is that it is limited to a more apples-to-apples comparison: all of the sites had a minimum density of 51 du/ac, rather than trying to mix in with medium or low density projects. Particularly since, with one exception, the site inventory applies the multiplier

final approved project included medium density on that portion of the site. We have not tried to adjust for that fractional portion, but instead have calculated the numbers as if it had a minimum of 20 du/ac, not 51 du/ac. Adjusting to take into accounting the 51 du/ac minimum north of Boyton and east of Copper would reduce the “percentage-of-minimum” further.

HOUSING ELEMENT

California Department of
Housing and Community Development
February 23, 2023
Page 9

to those Lawrence Station sites with a minimum density of 51 du/ac, this approach is probably the most appropriate.

However, there is a last important piece to note, which materially affects all of the numbers above. The first site on Table 13.6-3, included in all of the charts above, i.e., 2904 Corvin, is an exceptional situation which is unrepresentative of projects likely to occur in the sites on the inventory. As explained on the City's website and in other press coverage,⁸ 2904 Corvin is a 144 "micro-unit" affordable housing project, built primarily as supportive housing for those making a transition from homelessness, and including on-site support services. Because it has 144 units affordable to those with low or very low incomes (plus a two bedroom manager's unit), it was able to apply density bonuses to significantly exceed the maximum zoned density for the Lawrence Station Specific Plan (which would have limited it to 108 units; 1.08 acres times 100 du/ac). On completion, it will have 80 units reserved for the homeless: single occupancy, 300 square foot, "micro-studios" with a private bathroom and kitchenette. The construction was heavily subsidized by a county bond measure to build affordable housing specifically for the homeless. It is not representative of the likely density of a project that includes 30% moderate income or even 30% low income units, because most affordable housing projects build larger units that can accommodate families. It is thus not fairly considered in calculating a "typical" density. It should be excluded from the analysis to avoid distorting the capacity calculation. Without it, the averages (mean) above are significantly reduced: 140% for idea 1, 134% for idea 2, 139% for idea 3.⁹

Because Lawrence Station has a greater amount of land on the inventory, and because the "average" was distorted by more significant errors, the impact of adjusting the capacity multiplier is much higher than for Tasman East. If a percentage based on "average" (mean) above the minimum of 139% is applied – which we think would be the most principled, because it excludes the homeless supportive housing project at 2904 Corvin, and then limits the analysis to high or very high density sites, while taking due account of the parkland/roadway dedication issue and other omitted sites – the site inventory would be reduced by 572 units: 234 in the very low income category, 169 in the low income category, and 169 in the moderate income category.

⁸<https://www.santaclaraca.gov/Home/Components/BusinessDirectory/BusinessDirectory/280/2495?alpha=L>; <https://sanjosespotlight.com/santa-clara-first-supportive-housing-project-breaks-ground/>

⁹ The medians for the three are 118-163%, 143%, and 137-147%; a "median" when calculating an average based on four items in a data set is less helpful than when deriving a median from a longer data set. But the three medians here help support the validity of the 139% statistic; they do not diverge to the same significant degree as the Tasman East median and mean.

C. The Patrick Henry “Average” Is Based On No Data.

We turn next to the Patrick Henry area, where we cannot create a chart, because there is no valid data at all.

Here, Santa Clara used a multiplier of “maximum densities x 72%,” and explains that it was used “as there are currently no existing or approved projects in the Patrick Henry Specific Plan area. Santa Clara included no rationale for the number in the Housing Element, contrary to the requirements in Government Code section 65583.2(c), which requires that the City “determine,” “specify,” “demonstrate,” “calculate,” and appropriately “adjust” a “realistic” number, using “typical densities of existing or approved residential developments.” Absent sufficient information, Santa Clara is not permitted to simply imagine that 72% is an appropriate multiplier. It should instead use the established minimum density. Government Code § 65583.2(c)(1).

Based on the drafting history, the apparent inspiration of the 72% statistic is a single proposed project (Pactron/Summerhill) listed on table 13.6-3 for the Patrick Henry area. In the draft circulated the week before the final Planning Commission hearing, the draft had indicated that it would use a 119% “percentage of minimum” based on this proposal. The day before the Planning Commission hearing, staff made a last-minute change in the creation of Appendix B (the site inventory), claiming that the Patrick Henry area densities should be calculated based on a 72% “percentage of maximum” instead of a 119% “percentage of minimum.” To the extent that the Pactron/Summerhill proposal is in fact the basis for the 72%, it is flawed.

First, this proposal does not show an average or typical density of an existing or approved project. It does not show what even a single builder has succeeded in building at the listed percentage-of-minimum density. The statute directs that “typical densities of existing or approved residential developments at a similar affordability level in that jurisdiction” is the relevant data set; a single proposed but-not-yet-approved project, and a market-rate one at that, doesn’t meet the minimum test for consideration, because it is neither “typical” nor “existing or approved.” Government Code § 65583.2(c)(2). This rule makes good sense: A proposed project may not be approved or ever built, and so has not been tested by the real world to determine if it reflects the “realistic” capacity¹⁰; City staff may not even have reviewed it for compliance with Santa Clara zoning laws. Meanwhile, “typical” requires more than a handful, and certainly more than one. Because no housing has been built in the Patrick Henry area at all, the City lacks data on which to argue that the statutory directive of applying minimum density

¹⁰ See Government Code § 65583(a)(3) (requiring a site inventory to show the “realistic and demonstrated potential for redevelopment”); § 65583.2(c) (“The inventory shall specify for each site the number of units that can realistically be accommodated . . .”); § 65583.2(c)(2)(C) (“A site may be presumed to be realistic for development to accommodate lower income housing if, at the time of the adoption of the housing element, a development affordable to lower income households has been proposed *and approved* for development on that site.”) (emphasis added).

HOUSING ELEMENT

California Department of
Housing and Community Development
February 23, 2023
Page 11

based on densities should be ignored or adjusted based on real-world experience. Meanwhile, the City's calculations fail to account for the possibility that future projects may include commercial or office uses, even though several of the Patrick Henry zoning categories provide this potential. The City should use the minimum densities as the fail-safe for this area of the City, where no housing has yet been built at all.

Second, the last minute switch from a "percentage of minimum" (the approach used for Tasman East and Lawrence Station) to a 72% "percentage of maximum" was used to inflate the numbers based on the very high maximums used for Patrick Henry. This seemingly minor change makes a big difference – about 728 units – but the current draft of the Housing Element does not "demonstrate" why the "percentage of maximum" is valid or realistic, as required. Government Code § 65583.2(c). A "percentage of maximum" untethers the approach from reality: a jurisdiction could choose (to take an extreme example) a 1,000 du/ac "maximum" and then claim that lower income housing needs are accommodated even though no project has ever been built with that density. Note also that in the Tasman East area, with arguably the most similar zoning rules to Patrick Henry, the average "percentage of maximum" based on built and approved market-rate projects is only 50%, further casting doubt on the "72% of maximum" claim for Patrick Henry.

Absent a data-driven reason for the "72% of maximum" multiplier for the Patrick Henry area, Santa Clara fails to justify the upward adjustments it applied. The minimum density should be used instead. This makes a big difference: 3,207 units total for the Patrick Henry area, instead of 4,549, and a failure to meet the very low income RHNA.

D. Santa Clara Failed To Analyze The "Typical Densities Of Existing Or Approved Residential Developments At A Similar Affordability Level."

If a city uses the minimum density under section 65583.2(c)(1), it can also treat the site as appropriate to develop at that minimum density for lower income housing under section 65583.2(c)(3), which provides that sites with a zoned density of at least 30 units/acre are considered adequate for lower income housing. But if the city does not use the minimum density, as the latest draft now proposes, it must differentiate between market-rate and affordable housing projects in developing a realistic estimate. Government Code § 65583.2(c)(2). Here, the City's Housing Element is seriously flawed, because it relies almost exclusively on market-rate, rather than affordable, housing projects in calculating the capacity of the inventory.

Section 65583.2(c)(2) was amended in 2017 (AB 1397) to emphasize that "typical densities" are not sufficient; the relevant evidence from which to make a capacity calculation higher than minimum is by comparison to "typical densities of existing or approved residential developments *at a similar affordability level in that jurisdiction.*" See also Government Code § 65583(a)(3) (requiring that sites have a "realistic and demonstrated potential for redevelopment during the planning period to meet the locality's housing need for a designated income level.").

A market-rate developer may be able to afford to build 300 units on 2.51 acres, or even 800 units on 6.5 acres, as Sares Regis proposes to do at Patrick Henry. But it is well-recognized that a 100% affordable income development generally cannot afford a project of this magnitude. As the HCD Site Inventory Guidebook explains:

To achieve financial feasibility, many assisted housing developments using state or federal resources are between 50 to 150 units. Parcels that are too small may not support the number of units necessary to be competitive and to access scarce funding resources. Parcels that are large may require very large projects, which may lead to an over concentration of affordable housing in one location, or may add cost to a project by requiring a developer to purchase more land than is needed, or render a project ineligible for funding.

HCD Site Inventory Guidebook (May 2020) at p. 15. These limitations are why the Legislature provided in AB 1397 that sites smaller than 0.5 acres, or larger than 10 acres, are usually ineligible, absent a specific evidentiary showing, to accommodate the need for lower income housing. *Id.*; Government Code § 65583.2(c)(2)(A) and (B). Indeed, the same law that added section 65583.2(c)(2)(A) and (B) also added the “similar affordability level” language to subsection (c)(2); the Legislature simultaneously added several provisions to ensure that site inventories realistically evaluate whether affordable housing will be produced. AB 1397 (Stats. 2017 ch. 375).

In order to depart from the minimum density, Santa Clara would therefore need to show not just that market-rate projects can achieve higher-than-minimum densities like the 139% average in Lawrence Station, or 201% average in Tasman East, but that “typical densities” for a 100% affordable housing project do so as well, including at the very high densities projected for these sites.

Santa Clara’s Housing Element fails to make this required showing. Of the projects on Table 13.6-3, or even the more complete lists discussed above, there is only one project that can be described as having a “similar” level of affordable housing (i.e., 100% below market rate): the 1.08 acre project at 2904 Corvin. That project fits the general range of size for affordable housing – at 145 affordable units, it is within the 50-150 unit range discussed by HCD. But it is one-of-a-kind: the first homeless supportive housing in the City, heavily subsidized, with single-occupancy “micro-units” that are only 300 square feet in size, and the only affordable housing project built in any of the three Specific Plan areas. One-of-a-kind is not “typical.”

The remaining site inventory in Tasman East, Lawrence Station, and Patrick Henry is projected to meet the needs for very low-, low-, and moderate-incomes (*see* p. 13.6-10, splitting the capacity 33.33 percent each to very low-, low- and moderate-incomes). Yet the data to support the claimed densities is based exclusively on market-rate projects that did not have this mix of affordability. In the Tasman East area, table 13.6-2 shows that of eleven projects, building 4,459 units of housing, the number of units of very low- and low-income housing

HOUSING ELEMENT

California Department of
Housing and Community Development
February 23, 2023
Page 13

accommodated is: zero. This shows that there are not “typical densities of existing or approved residential developments at a similar level of affordability” for this area. As stated above, there has been no housing built or approved in the Patrick Henry area at all; there is no “typical” market-rate project there, much less a typical density for a project with the level of affordability calculated by the inventory.

Moreover, as further explained in our letter of January 21, many of the sites include areas that have been zoned as parkland or right-of-ways. While the City Attorney’s Office argued at the Planning Commission hearing that the gross acreage of the sites could nonetheless be included because a housing developer could use the gross acreage in calculating the minimum/maximum number of units permitted by the zoning, this ignores the practical reality: a more dense project (i.e., the same number of units, squeezed into a smaller buildable footprint) is a much more expensive one. Taking APN 104-04-124 as an example, 2.32 of the 4.7 acres is zoned for a park; any development would need to put all of the units on the remaining 2.38 acres. Instead of building a 502 unit project on 4.7 acres, Santa Clara apparently contends that an affordable housing developer will build 2.32 acres of park, and then build all 502 units on the 2.38 acres that remain (a built density of 211 du/ac). This speculation is not realistic. No affordable housing developer has ever built such a development in Santa Clara.

If Santa Clara wants to estimate a realistic production of affordable housing in the Tasman East, Lawrence Station, and Patrick Henry areas, where large, high density market-rate projects are being built (instead of using the safe harbor of minimum densities), then it should estimate how much lower-income housing will be built there based on the actual data of affordable housing production in market rate projects.¹¹ That data shows that housing affordable to those in the very low-, low-, and moderate-income categories is produced at a rate somewhat less than the 12% inclusionary housing mandate under city law. (Which, notably, leads mostly to inclusion of moderate units and no very low- or low-income units for a large number of projects, *see* Table 13.6-2 (Pending and Approved Projects)). The site inventory could include the high density projects, but should only include the realistic number of units in the lower income categories that are historically built in projects of this type. The current Housing Element fails to make a showing sufficient to satisfy section 65583.2(c), as amended by AB 1397. The real data shows that the current site inventory will never achieve the claimed production of affordable housing that Santa Clara presents in the Housing Element, or that is necessary to accommodate the needs of the community.

¹¹ If the City instead wants to rely on statutory presumptions like the “deemed adequate” statutory rule of section 65583.2(c)(3) to claim that these sites can be used for lower income housing, it should limit itself to the minimum densities that state law compels HCD to accept. The City’s planners may know that even the minimum densities are not realistic for the largest sites (given that the size of the projects substantially exceeds what affordable developers actually build), but they would be able to rely on the statutory presumption, rather than speculative and unrealistic math.

The solution is to determine the realistic capacity of the new high-density neighborhoods by projecting market-rate projects with their typical complement of affordable units, and then to supplement it with smaller, geographically dispersed sites to accommodate the remainder of the very low-, low-, and moderate-income need on sites that are realistic in scale and density for affordable housing projects. The City's experience shows that affordable housing developers generally build within a half-mile of grocery stores and that they build projects in the range of 50-150 units. Building in the Patrick Henry area, for example, satisfies neither of these – the area is currently a food desert (more than one mile to a grocery store) – and the parcel size and minimum density exceeds anything that is realistic and demonstrated for a project with 100% affordable housing.¹² The City has numerous other opportunities for places where affordable housing developers could realistically build housing, e.g., along El Camino Real, or Stevens Creek Boulevard – if only the City would commit to rezoning to allow housing to be built there. Affordable housing developers should not have to run a years-long gauntlet of seeking special permission to build housing on realistic, underutilized sites, as was done with the Catholic Charities project at 1601 Civic Center. Adequate, available, realistic sites should be rezoned throughout the city to make it possible to realistically build the required amount of housing affordable to all income levels during the next eight years.

¹² For example, the projections that the need for 972 units of housing affordable to those with very low, low, or moderate incomes will be met by a project at 4701 Patrick Henry Drive, a 687-unit 100% affordable housing project at 3055 Patrick Henry, or a 664-unit 100% affordable housing project at 3350 Central Expressway, is simply not realistic. The City's experience with affordable projects matches well the HCD guidance about projects of 50-150 units.

HOUSING ELEMENT

California Department of
Housing and Community Development
February 23, 2023
Page 15

E. Conclusion

Applying a minimum density approach to capacities, as Santa Clara did with its earlier draft reviewed by HCD, is simple. When Santa Clara instead made its eleventh hour addition to the Housing Element, projecting much larger housing production for the same sites, it was required to do so based on actual evaluation of the typical densities for projects with a similar level of affordability. As explained above, Santa Clara's Housing Element did not comply with this statutory mandate. HCD should find that Santa Clara's Housing Element, as adopted on January 31, 2023, is not in substantial compliance with state law.

Respectfully submitted,

Thomas B. Mayhew

Charles J. Higley

Notes:

State law also includes specific criteria for assessment of the realistic availability of non-vacant sites during the planning period. If non-vacant sites accommodate half or more of the lower-income need, the Housing Element must present “substantial evidence” that the existing use does not constitute an impediment to additional residential use on the site. Due to the built-out nature of Santa Clara, most sites have existing uses. Non-vacant sites included in the inventory have been selected using the following criteria, which are indicated for each non-vacant site in the detailed sites matrix included in Appendix B. A site identified under criterion 1, 2, or 3 requires no further factors. These criteria have been applied to all available sites (this does not include pending project sites).

- 1) Interest: Developer interest or property owner interest to redevelop the site.
- 2) Vacant Lots: Completely vacant lot.
- 3) City or County Ownership: Property is under City or County ownership, with defined intent to redevelop the site with a residential use at a higher density.
- 4) Redevelopment Trend for Existing Use: Uses that are similar to those that have been previously recycled in Santa Clara (e.g., industrial uses, small shopping centers, offices, stand-alone restaurants and retail uses, properties zoned exclusively for residential use that are currently developed well below the zoning capacity).
- 5) Participation in Specific Plan planning process: Property is located within a defined Specific Plan area and/or the property owner participated in the Specific Plan planning process.
- 6) Underutilized Residential Site. Property is zoned for residential use at a higher density than existing use or property is zoned residential and existing use is non-conforming.
- 7) Building/Land Value: Property improvement value is less than half of the land value (ratio is less than 1.00), indicating substantial underinvestment and the ability of a property owner to achieve financial gain through redevelopment.
- 8) Year: Structure was built prior to 1985 (and therefore over 36 years of age) but is not a designated or eligible historic structure, indicating that properties may need substantial improvements or replacement for maximum financial return.
- 9) Lease: Site has no existing tenant lease(s) or lease(s) expires or lease(s) have buy-out clauses within in 6th cycle planning period (where known).
